Mr. Sam F. Cryderman
Deputy Director
Bureau of Transportation
Planning
Michigan DOT
P.O. Box 30050
Lansing, Michigan 48909

Dear Mr. Cryderman:

The Multi-Regional Planning Division of the Bureau of Transportation Planning has documented the results of the M-72 Single Station Origin-Destination Survey conducted in 1978. The purpose of this survey was to determine volumes and patterns of traffic using M-72 through Grayling and to update a survey conducted in 1972.

The report was prepared by Patricia A. Eodchick, Transportation Planner Trainee with technical assistance provided by Vhybert Cameron, Engineer-in-Training. Supervision was provided by Robert M. Kirkbride, Region 10 Coordinator. All are, or were, assigned to the North Planning Section, managed by John B. Ouderkirk.

Sincerely,

R.J. Lilly
R. J. Lilly, Administrator
Multi-Regional Planning Division

An Equal Opportunity Employer

PREFACE

The primary purpose of this study is to provide data regarding the east-west flow of traffic on M-72 among the northern counties of lower Michigan. This is in response to numerous questions which arose during the course of the regional studies. A secondary purpose was to compile data for updating information obtained in the Grayling External Origin-Destination Survey conducted in 1972.

This report shows the expanded data in tabular form as developed from the surveys. It does not in any way intend to speculate, hypothesize or forecast alternatives or plans. It does, however, serve as a tool for those involved in attaining such ends.

Comparisons of data obtained from both the 1972 and 1978 surveys are presented in Appendix A.

TERMINOLOGY & DEFINITIONS

Classification Counts	A survey of vehicles in which those passing through the study area are placed in categories (passenger cars, single unit trucks, buses, etc.)
Destination	The place where a trip ends.
Interview Counts	A survey of vehicles in which those passing through the study area are stopped and drivers are interviewed regarding their origin, destination, and purpose of the trip.
Origin	The place where a trip begins.
Trip	One-way travel between an origin and destination.
Trip Ends	Each trip has two ends; an origin and a destination.
Trip Length Average	The value that is determined by summation of the recorded trip lengths and dividing by the number of trips.
Trip Length Median	The value that is determined by dividing the trip length distribution so that an equal number of trips is on either side of it.
Through Trip	A trip passing through the study area.
Terminal Trip	A trip with one end outside the study area and the other end inside the study area.

STUDY AREA

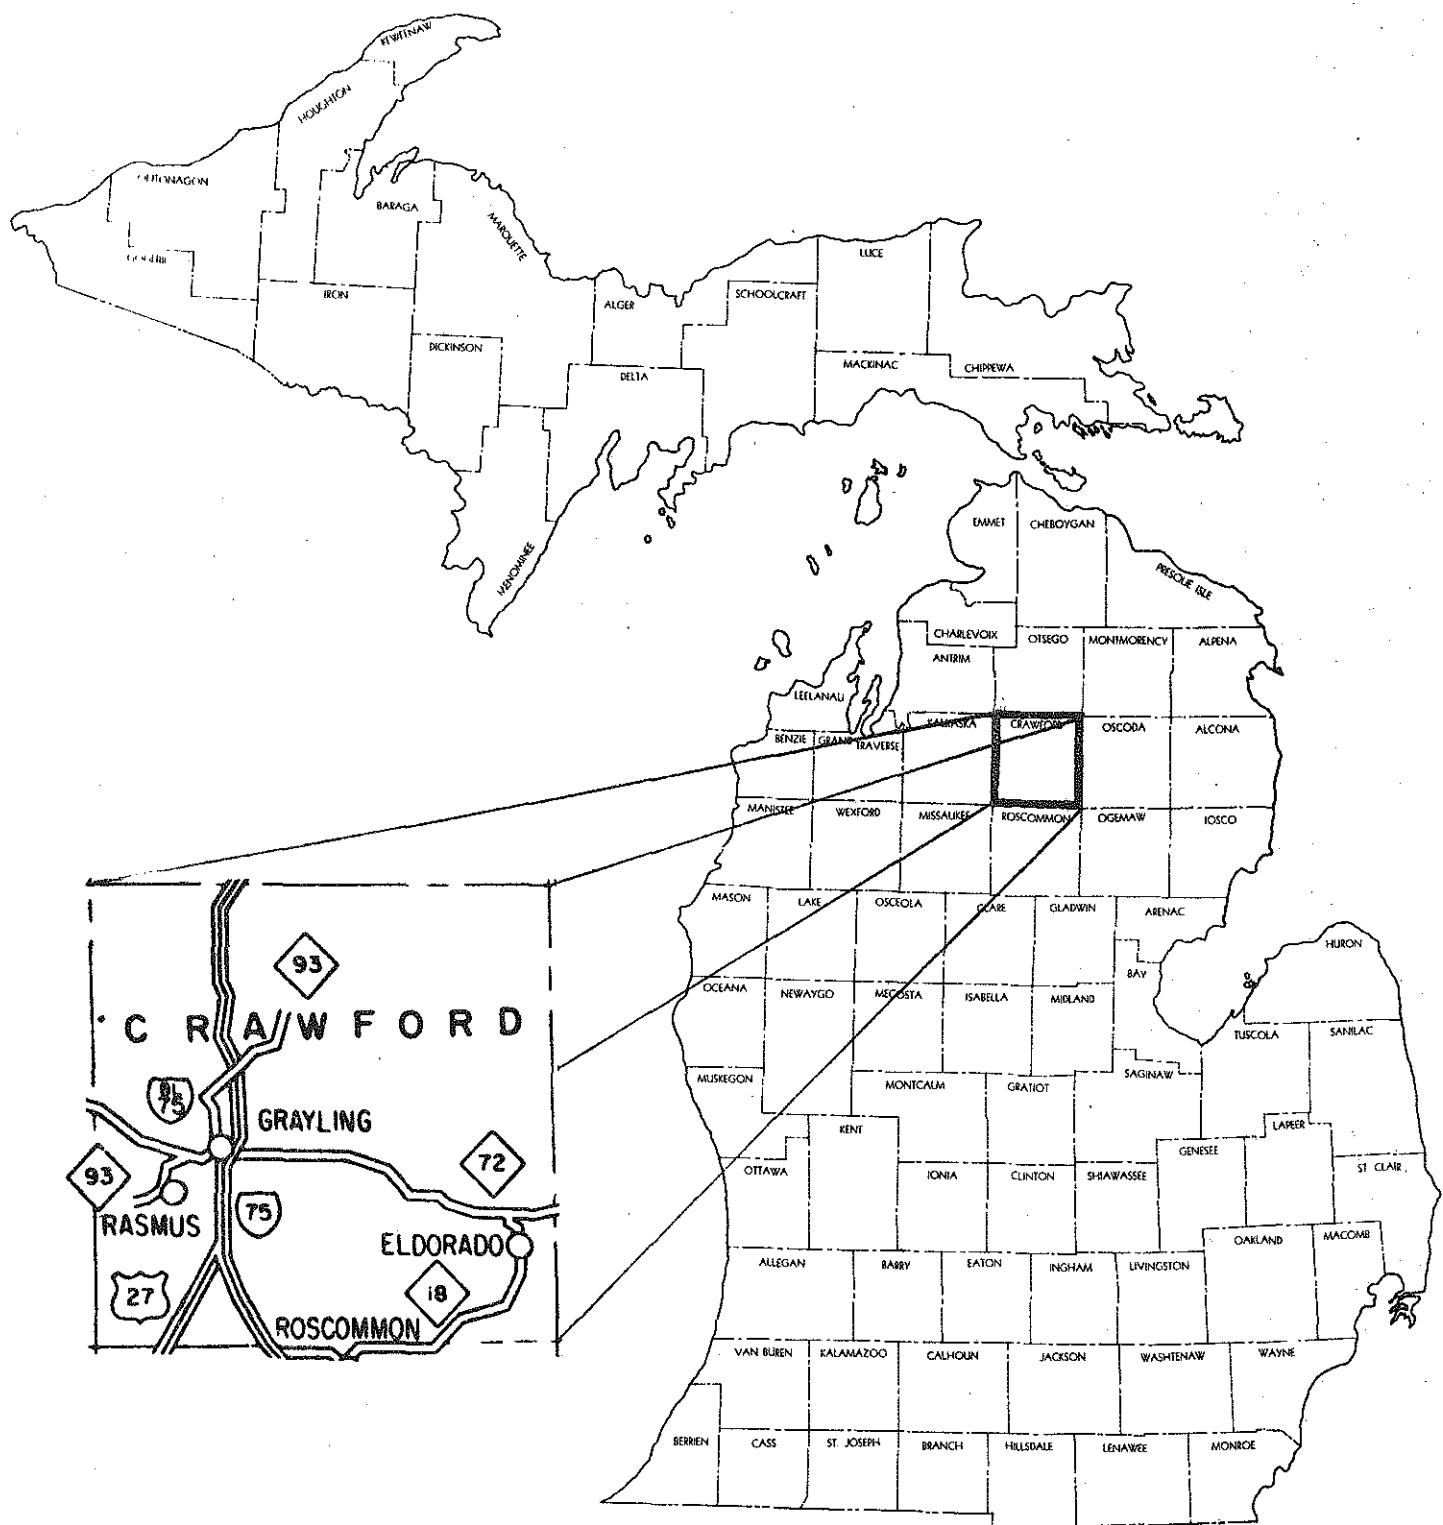

The City of Grayling (1970 Census Population 2,143) is centrally located within Crawford County in Northern Lower Michigan (see map on Page 2).

Grayling offers service, professional and health facilities to its trade area as well as Camp Grayling, home of the Michigan National Guard. Recreational attractions, primarily canoeing along the AuSable River, bring tourists in and through the study area.

Three state trunklines--I-75, M-72 and M-93--serve the Grayling area. M-93 is a short facility providing service to Camp Grayling to the southwest and Hartwick Pines State Park to the northeast. I-75 serves north-south traffic in the area.

The primary east-west route is M-72. To the east of Grayling M-72 is classified as a regional arterial; to the west it is classified as a statewide arterial.

STUDY AREA LOCATION

FIELD PROCEDURE

Two interview stations were established on M-72. Station 1 was located 0.5 mile east of the east city limits of Grayling. Station 2 was located 1.5 miles west of the west city limits.

Traffic information was obtained at the stations during May and July of 1978. Interviews and some classification counts were taken from May 8 to May 11 (Monday-Thursday).

Interviews were conducted between the hours of 6:00 a.m. and 8:00 p.m. Both inbound and outbound vehicles were surveyed. Vehicles were stopped and drivers interviewed regarding the origin, destination and purpose of their trip.

Manual classification counts were taken in conjunction with the interviews during those hours of station operation. For the remainder of the 24-hour period (8:00 p.m. to 6:00 a.m.) classification counts were obtained on July 13 and July 14 (Thursday and Friday).

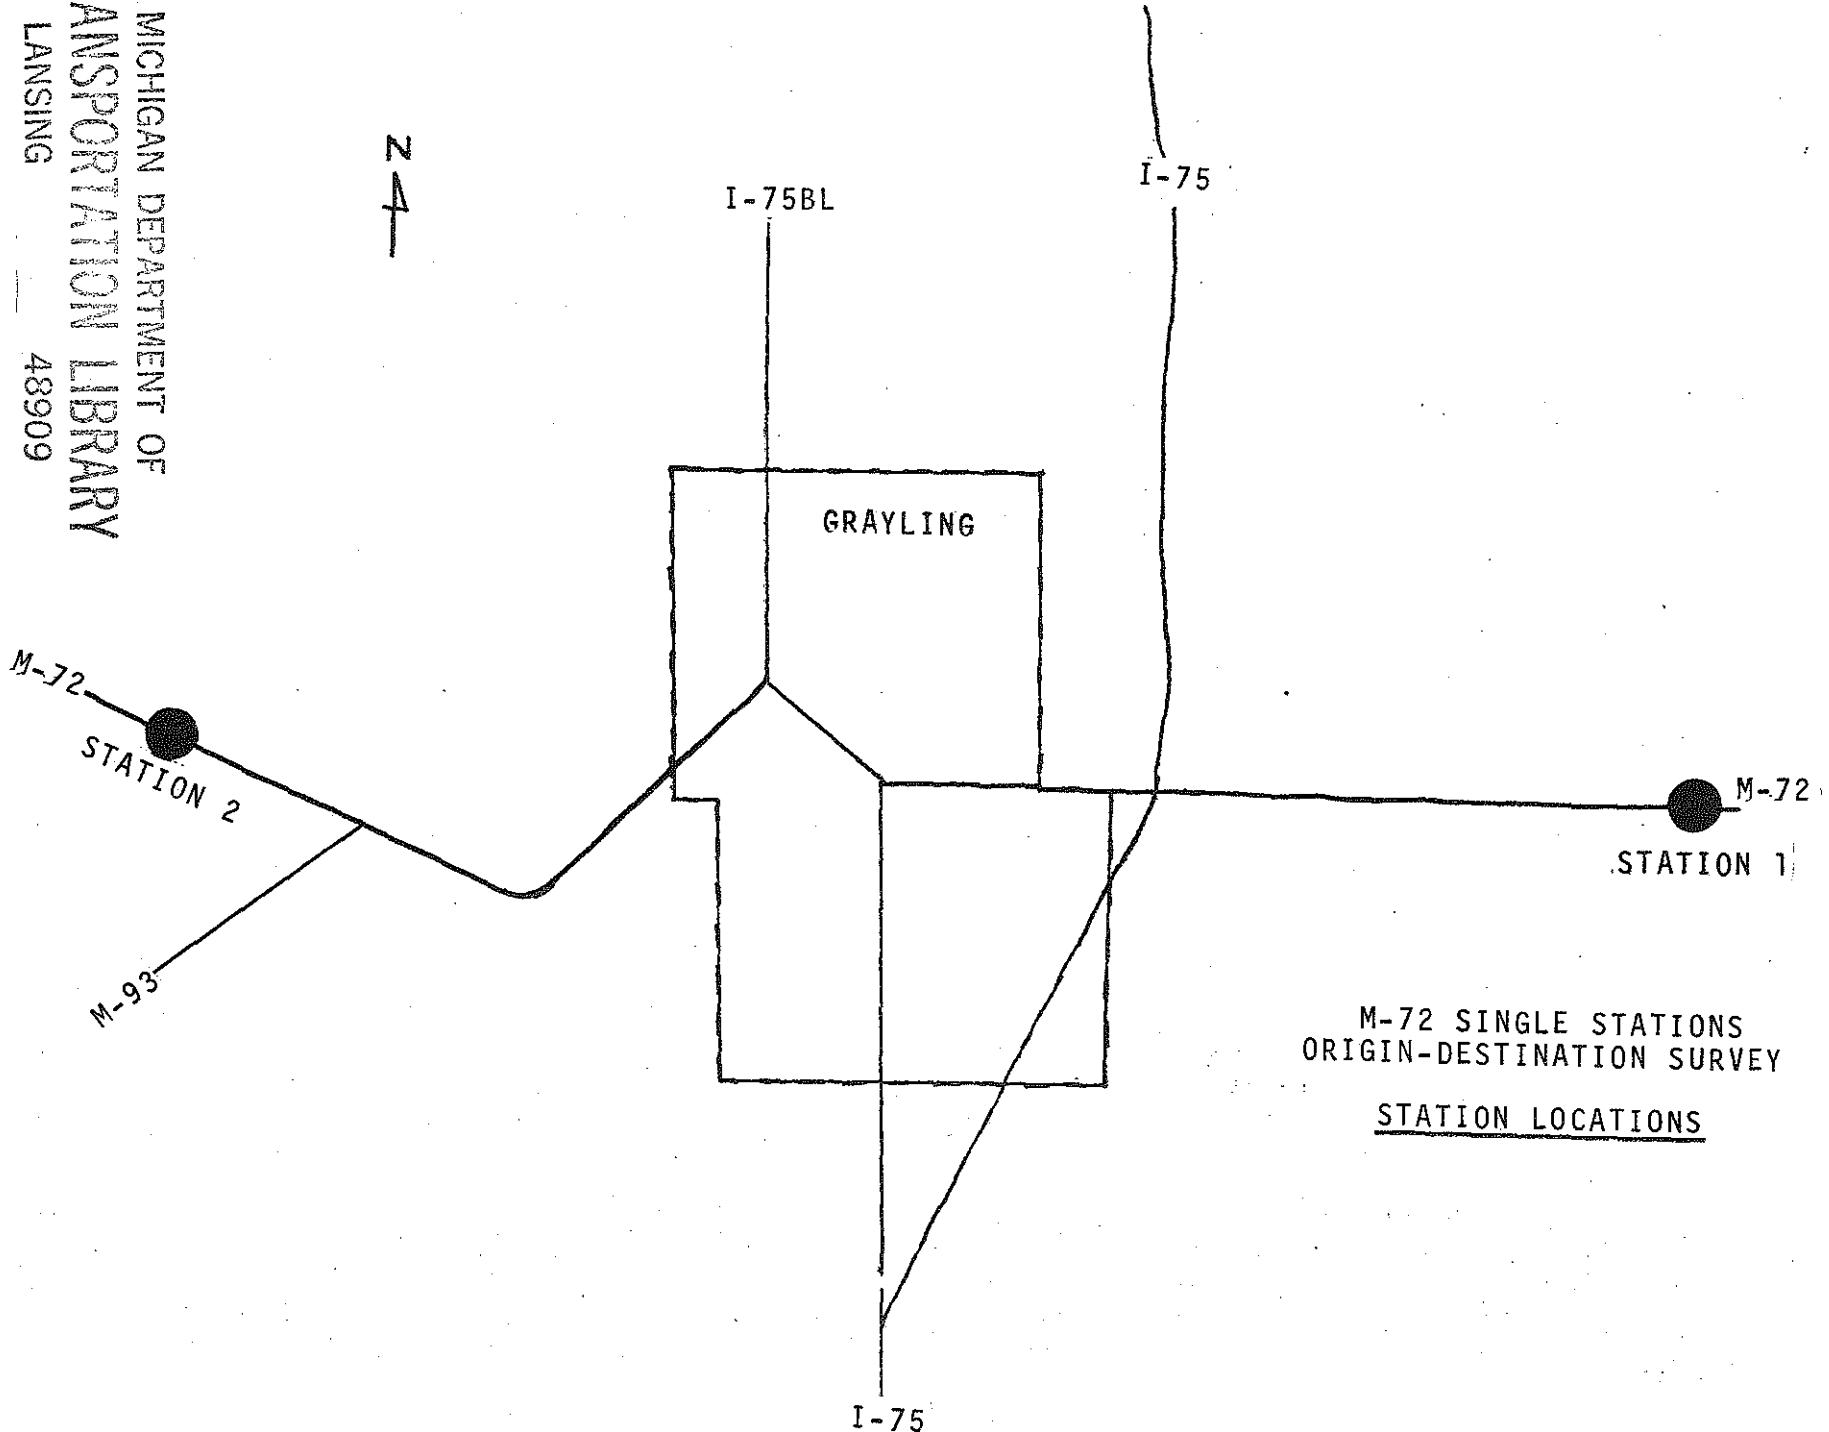

A sample copy of the interview form and the classification count form are shown in the Appendix.

APPENDIX A

COMPARISON
OF
1972 & 1978 O-D RESULTS
M-72 NEAR GRAYLING

The following pages show statistical data comparisons of the 1972 and 1978 area studies. Interviews for the 1972 study were taken on June and July weekdays. The 1978 interviews were taken on May weekdays. A total of 2,843 interviews were taken at Stations 1 and 2 in 1978, while 5,988 interviews were taken at Stations 3 and 5 in 1972.

It is important to note the differences of the station locations for the two years (see map, Page A-2). In 1972, for instance, Station 3 is located just east of the I-75/M-72 junction. There are no major roads between Stations 3 and 1 and both, therefore, reflect most traffic east of the Grayling east city limits.

Station 5 is located on M-72 just east of M-93. By comparison, Station 2 is located just west of M-93. Station 2 (1978) does not consider all traffic west of the west Grayling city limits.

Vacation trip purposes east of Grayling show considerable differences between the 1972 and 1978 data. A total of 235 vehicles traveled for vacation purposes in 1972. In 1978 only 35 vehicles traveled for vacation purposes.

APPENDIX B

USE OF GENERAL PURPOSE SUMMARY TABLES

The table on page B-3 shows the distribution of trips passing through the station by vehicle type and trip purpose.

The vehicle type codes are:

- 1 = Passenger Car Without Trailer
- 2 = Passenger Car With Trailer
- 3 = Panel or Pickup Truck Without Trailer
- 4 = Panel or Pickup With Trailer
- 5 = Other (Larger) Single Unit Trucks
- 6 = Truck Combinations
- 7 = Busses
- 8 = Motorcycles

The trip purpose codes are:

- 1 = Work
- 2 = Personal Business
- 3 = Shopping
- 4 = Vacation
- 5 = Other Social Recreation
- 6 = All Other

The sample cell outlined represents 250.66 trips which were shopping (3) trips made by passenger cars (1). This first figure in each cell will always be the raw number of trips. The second figure indicates that 70.95 percent of the trips with trip purpose 3 were passenger cars. The third figure indicates that 14.80 percent of the trips made by type 1 vehicles were shopping trips. The last figure in the cell indicates

that 10.12 percent of all trips in the table are of this type (i.e., vehicle type = 1 and trip purpose = 3). The row total at the right shows that 353.28 trips, or 14.26 percent were shopping trips. The column total at the bottom shows that 1693.45 trips, or 68.34 percent were passenger cars. The total number of trips (2477.88) in this table is indicated at the lower right. There will be a table for each station for each interview date.

USE OF TRIP LENGTH FREQUENCY DISTRIBUTIONS

A portion of a trip length frequency distribution graph is on the following page. The vertical axis represents travel time in tens of minutes while the horizontal axis is the percent of trips traveling this particular length of time. For example, 182 trips or 4.164 percent of the total were approximately 30 minutes in length. The percent of trips which were 30 minutes of less is 35.896.

Statistical information such as mean and standard deviation are printed at the end of each table. A similar graph for each station for each interview date will be presented.

TRUCK IDENTIFICATION

Panel and Pickup (2 axle, 4 tire)

Light 2-axle, 4-tire trucks of less than one ton rated capacity, including:

a. Panel and pickups standard type, including mini-vans (Ford Econoline, Volkswagen, etc.)

b. Pickup trucks carrying a cab high (sleeper style) camper.

All Other Single Unit Trucks

Heavy 2-axles or more (dual tires or super singles) equal to or greater than one ton rated capacity, including:

a. All multistop or standup delivery trucks (primarily designed for moving rural and urban goods.)

b. All large 4-tire trucks with flatbed, dump or other heavy cargo bodies.

c. Pickups and panels, having heavy truck type hubs or axles, or are noticeably larger and longer than the standard type.

d. Heavy 2-axle trucks with a higher than cab camper body.

e. Truck tractor without trailer.

Truck Combinations

Truck and/or truck tractor (power unit) pulling semi-trailer or full trailer combinations.
