July 23, 1975

Mr. Sam F. Cryderman
Deputy Director
Bureau of Transportation Planning
Lansing, Michigan 48904

Dear Mr. Cryderman:

Data presented in this report provides the Frankenmuth area decision makers with an additional evaluation tool. Field information for this report was collected in the month of June, 1975, under the direction of Milton Lamb, Origin and Destination Unit Manager.

Transportation Planner/Analyst, John Jennings prepared the report under the direction of East Planning Section Manager, Maynard Christensen. Regional Coordinator, Richard Baibak provided additional area knowledge and study material.

Sincerely,

Keith E. Bushnell, Administrator
Multi-Regional Planning Division

TERMINOLOGY AND DEFINITIONS

Cordon Line	An imaginary line around the area under study.
External Station	A point on a highway at the limits of the study area (Cordon Line) where drivers of vehicles are stopped and interviewed.
Study Area	The area enclosed by the Cordon Line.
Origin	The place where a trip begins.
Destination	The place where a trip ends.
Origin-Destination Zone	(Internal Analysis Zone) a basic subdivision of the study area having a single or dominant land use, designated as such for purposes of tabulation and analysis.
Trip	One way travel between an origin and destination.
Terminal Trip	A trip with one end outside the study area and the other end inside the study area. (Beginning or ending at one of the internal analysis zones or districts).
Internal Trip	A trip with both ends inside the study area. (Beginning and ending at one of the internal analysis zones or districts)
Through Trip	A trip passing through the study area. (Both ends of the trip outside the Cordon Line).
Trip End	The origin or destination of a trip, each trip has two trip ends, i.e., 15,150 trips has 30,300 trip ends.

REGIONAL LOCATION

Frankenmuth Michigan is in the eastern part of Saginaw County in the Saginaw Bay region. Located on state highway M-83, twelve miles southeast of Saginaw and twenty-two miles north of Flint (See Map 1). The Cass River bisects the city in an east-west direction and M-83 divides the city into north and south sections. Designated locally as Main Street, M-83 is the major north-south route in the area.

**TRANSPORTATION LIBRARY
MICHIGAN DEPT. STATE HIGHWAYS &
TRANSPORTATION LANSING, MICH.**

MAP 1

REGIONAL-STUDY AREA - SAGINAW COUNTY

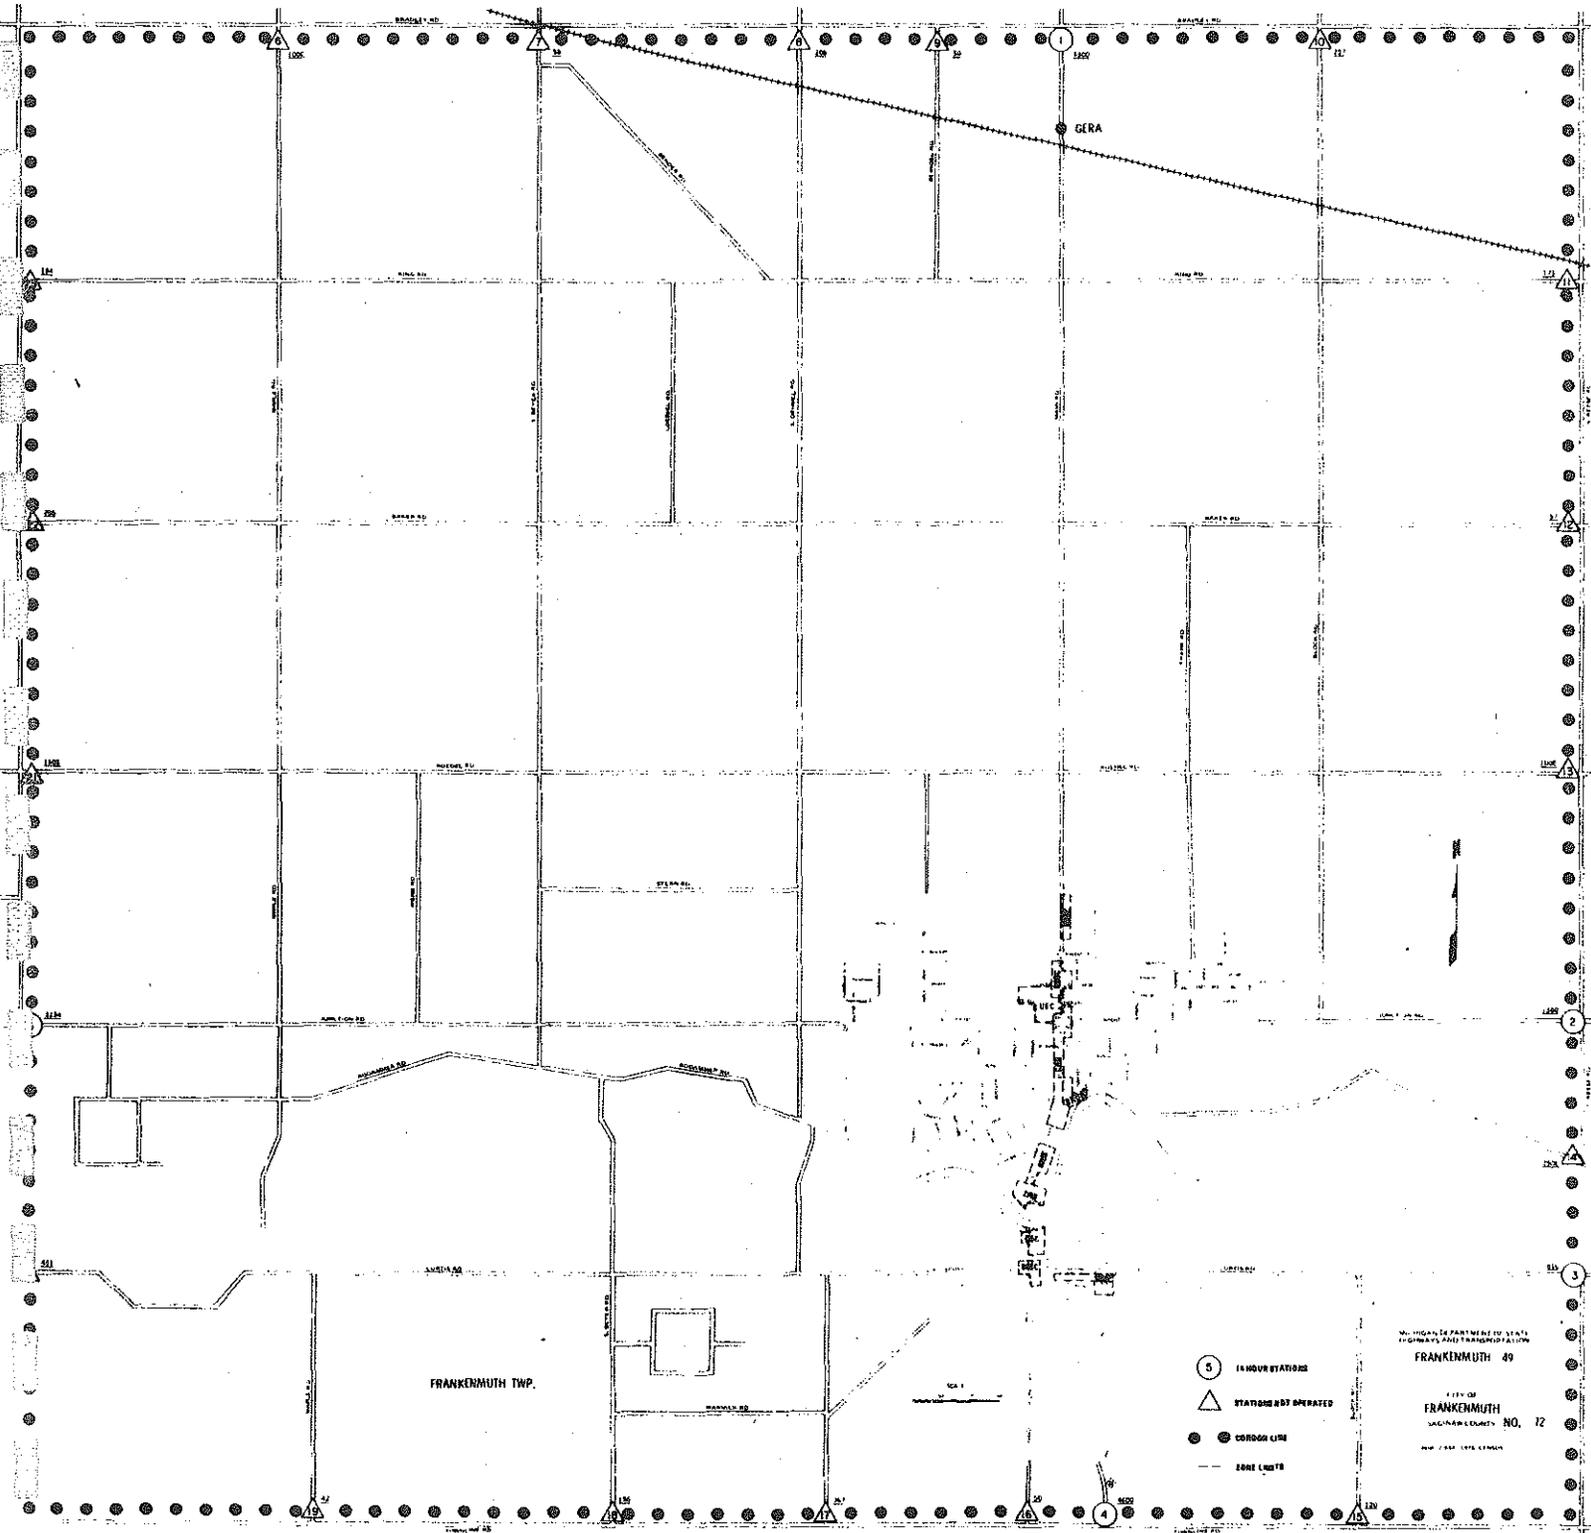

INTRODUCTION

The MDSH&T initiated the 1975 Frankenmuth Origin and Destination Study to aid local and regional authorities in their planning efforts. A comprehensive survey of the external origins and destinations of traffic in the Frankenmuth area was undertaken to determine which attractions account for a substantial portion of the areas economic vitability and traffic generation.

During the week of June 23-27, 1975, motorists entering or leaving the study area (see Map 2) were interviewed as to their; origin, destination, trip purpose, and other details. Over 15,000 vehicles passed through the interview points and over 10,500 motorists were interviewed during the study period.

MAP 2

MICHIGAN DEPARTMENT OF STATE
 HIGHWAYS AND TRANSPORTATION
FRANKENMUTH 49
 CITY OF
FRANKENMUTH
 SAGINAW COUNTY, NO. 12
 MAP 2 1975 LEGON

STUDY AREA

Cordon lines establishing the study area were similar to the Frankenmuth Township boundaries:

North Boundary - Bradley Road

South Boundary - Townline Road

East Boundary - S. Reese Rd.

West Boundary - Reimer Road

Major east-west routes in the study area are Curtis, Rodammer, and Junction Roads, respectively designated in the city as Jefferson, Tuscola, and Genesee Streets (see Map 2).

INTERVIEWS AND CLASSIFICATION COUNTS

During the week of June 23-27, 1975, motorists entering or leaving the study area were interviewed at one of five interview stations (see Table 1). Interview stations were located at major points of entrance and exit to the study area. Motorist interviews were conducted for 14 hour periods, 6 am to 8 pm. During the same week classification counts were taken for 24 hour periods at each interview station location (see Table 2).

Interview information collected consisted of the motorists:

- 1 Origin
- 2 Destination
- 3 Trip Purpose
- 4 Type of Vehicle
- 5 Number of passengers
- 6 Where the vehicle is garaged
- 7 Other interview data:
 - a) County where interviewed
 - b) Station number
 - c) Time of interview
 - d) Direction of travel
 - e) Date
 - f) Exit or entrance route

Classification counts consisted of counting the number of vehicles passing through each of the interview points and also recording the type of vehicle:

VEHICLE TYPE CODES

TOTAL	233	102

¹Motorcycles and buses are included in the classification counts but were not interviewed.

²Internal Zone trip information is not part of a minor O & D Study.

TABLE 2

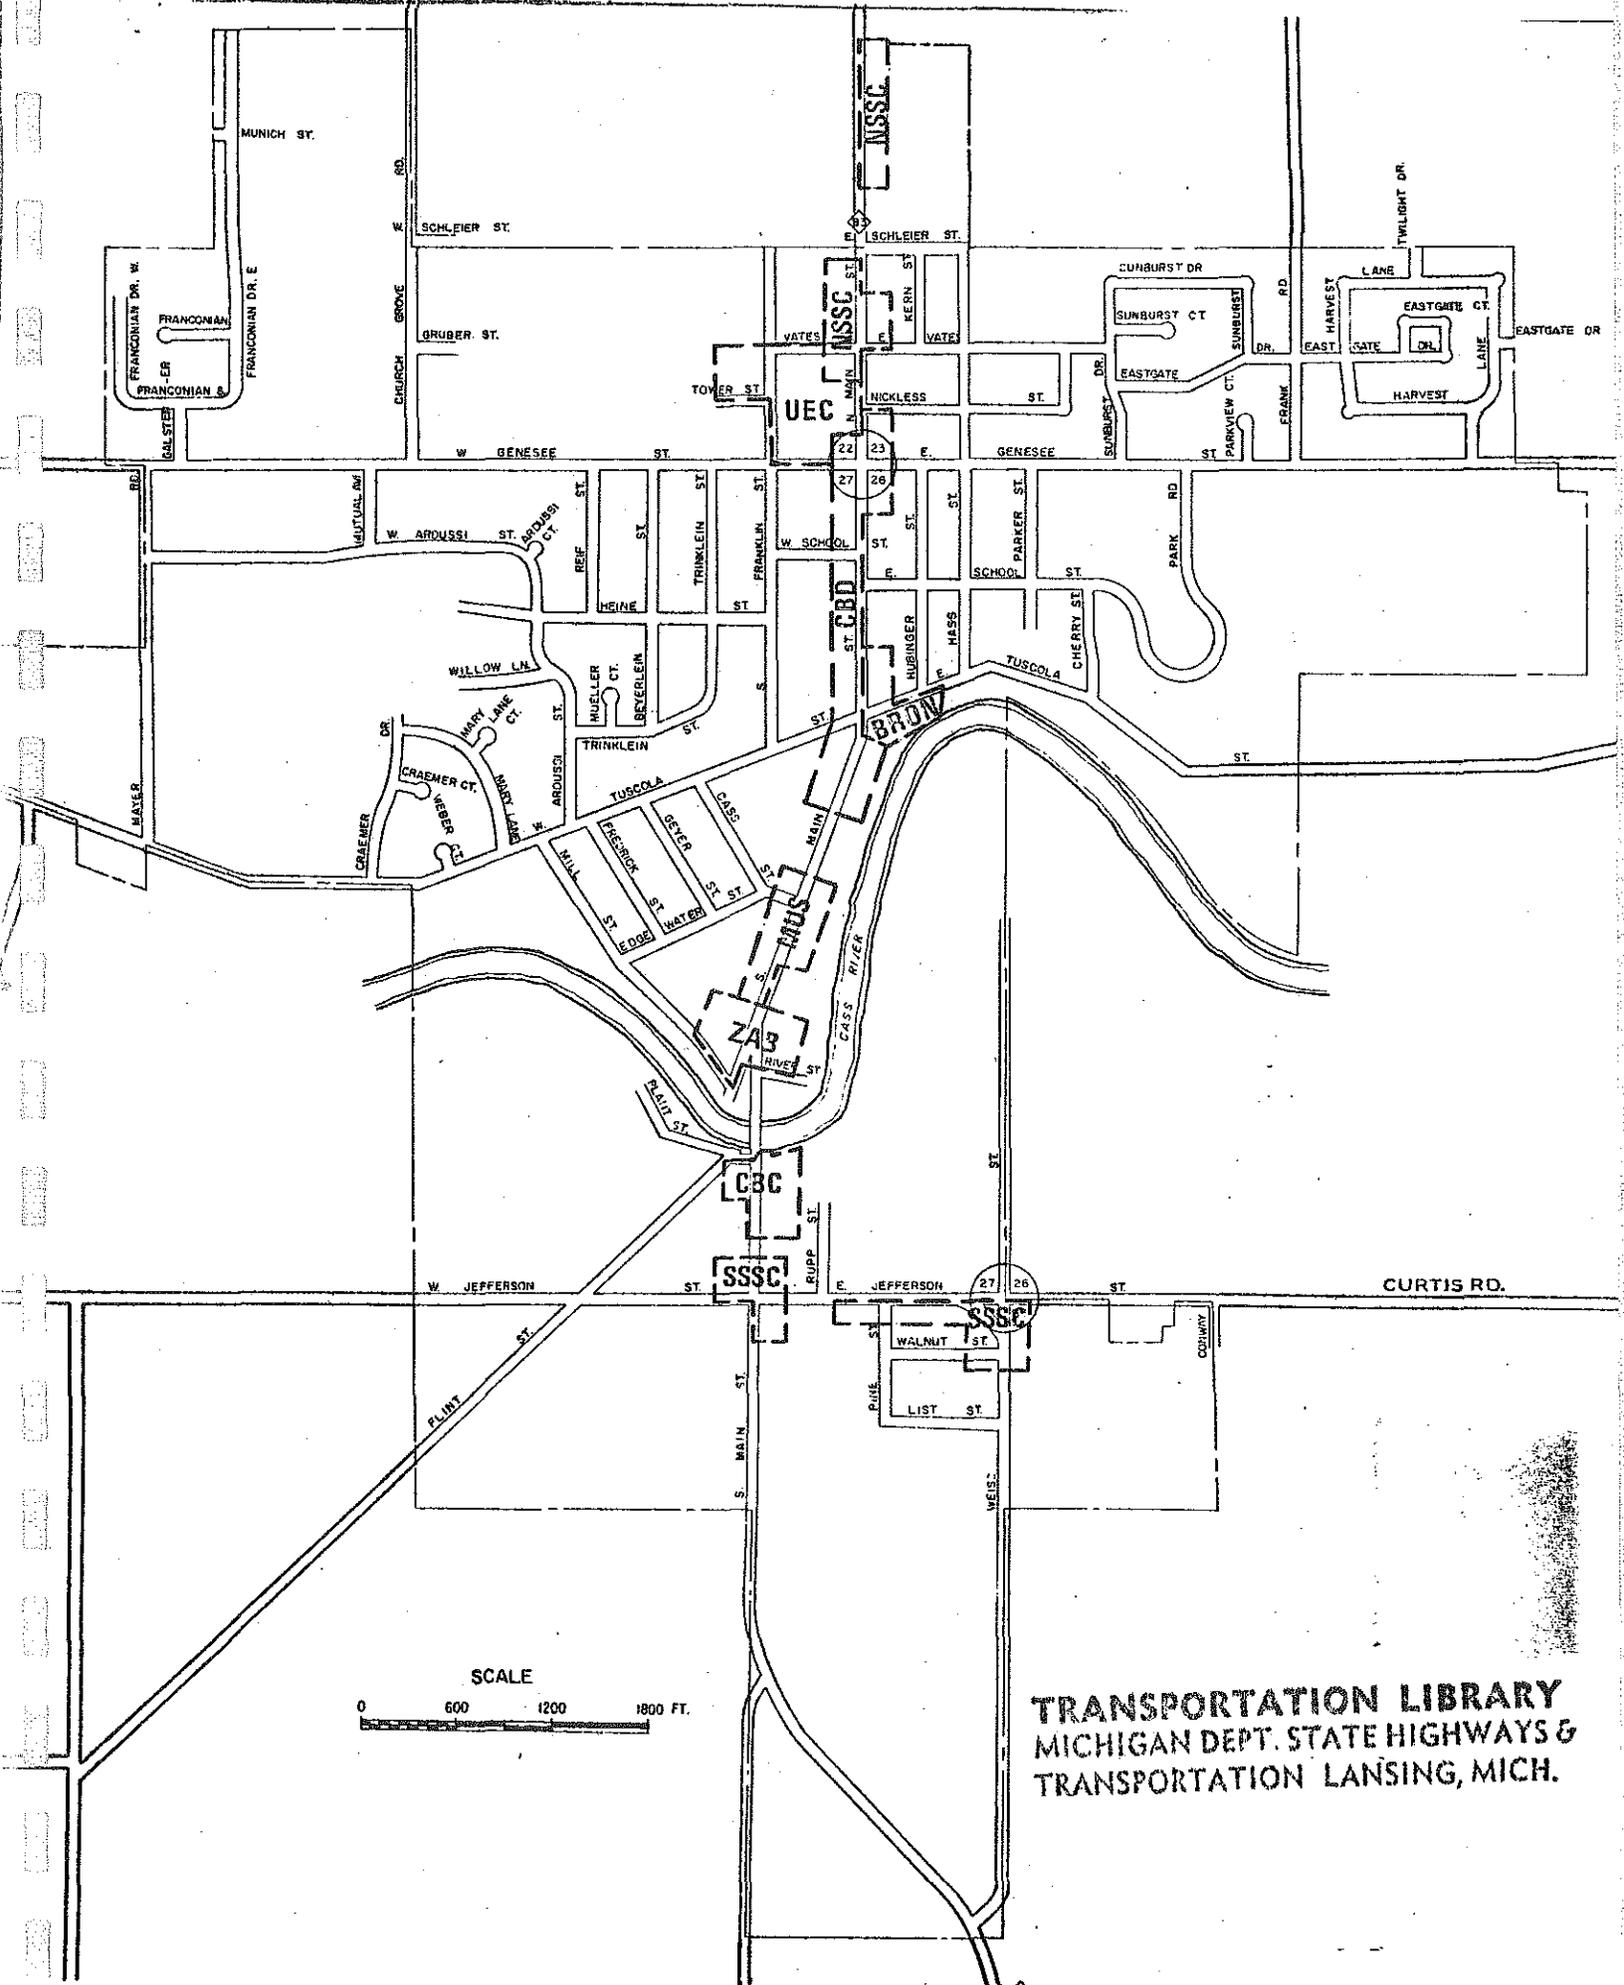

METHOD OF TABULATING DATA BY COMPUTER SYSTEM

Processing of the interview and classification data for use in the MDSH&T computer system enables the planner/analyst to use programs consisting of: Interview Station Data; Total Station Data; Trip Purpose and Vehicle Type Data; Trip End Summary Data; Trip Length Frequency Distribution Data.

Fourteen hour interview data was expanded, by computer programming, to represent 24 hour periods. Due to the expansion program different totals will appear in some of the reports, all within an acceptable range of difference.

To enable a more precise study of traffic movement, the study area was divided into zones (see Map 3). The concept of zoning is based upon the division of the area according to land use and traffic volumes (see Table 3). This concept ensures a more detailed process of data collection and tabulation.

TABLE 3

TOTAL STATION DATA

This program is designed to show the total number of through and terminal trips for all stations. Individual station percentages, for through and terminal trips, can also be computed from this program data.

Mathematical interpretation of the Total Station Data shows 75% of the total trips are terminal trips and 25% are through trips (see Table 4).

13

¹24 Hour Classification Counts include motorcycle and bus counts, See Table 2.

²Total Trips are expanded from the 14-Hour Interview Data and do not include the motorcycle and bus counts. Internal Zone trip information is not part of a minor O & D Study. See Table 2.

³Through Trip Data is divided in half because the motorists are interviewed at both entrance and exit points. An interview at one station determines information of the through trips, otherwise, the data would be computed as two individual trips.

TABLE 4

STATION DATA

Individual station interview data showing the total number of trip purposes and vehicle type (See Tables 5-9) is the end product of this report. Also shown on the tables are the percentage figures relating individual station data to the total number of trip purposes and vehicle type data.

Numerical inspection of the tables show the greatest percentage of both trip purposes and vehicle type are work trips and passenger cars without trailers.

TRIP LENGTH FREQUENCY DISTRIBUTION

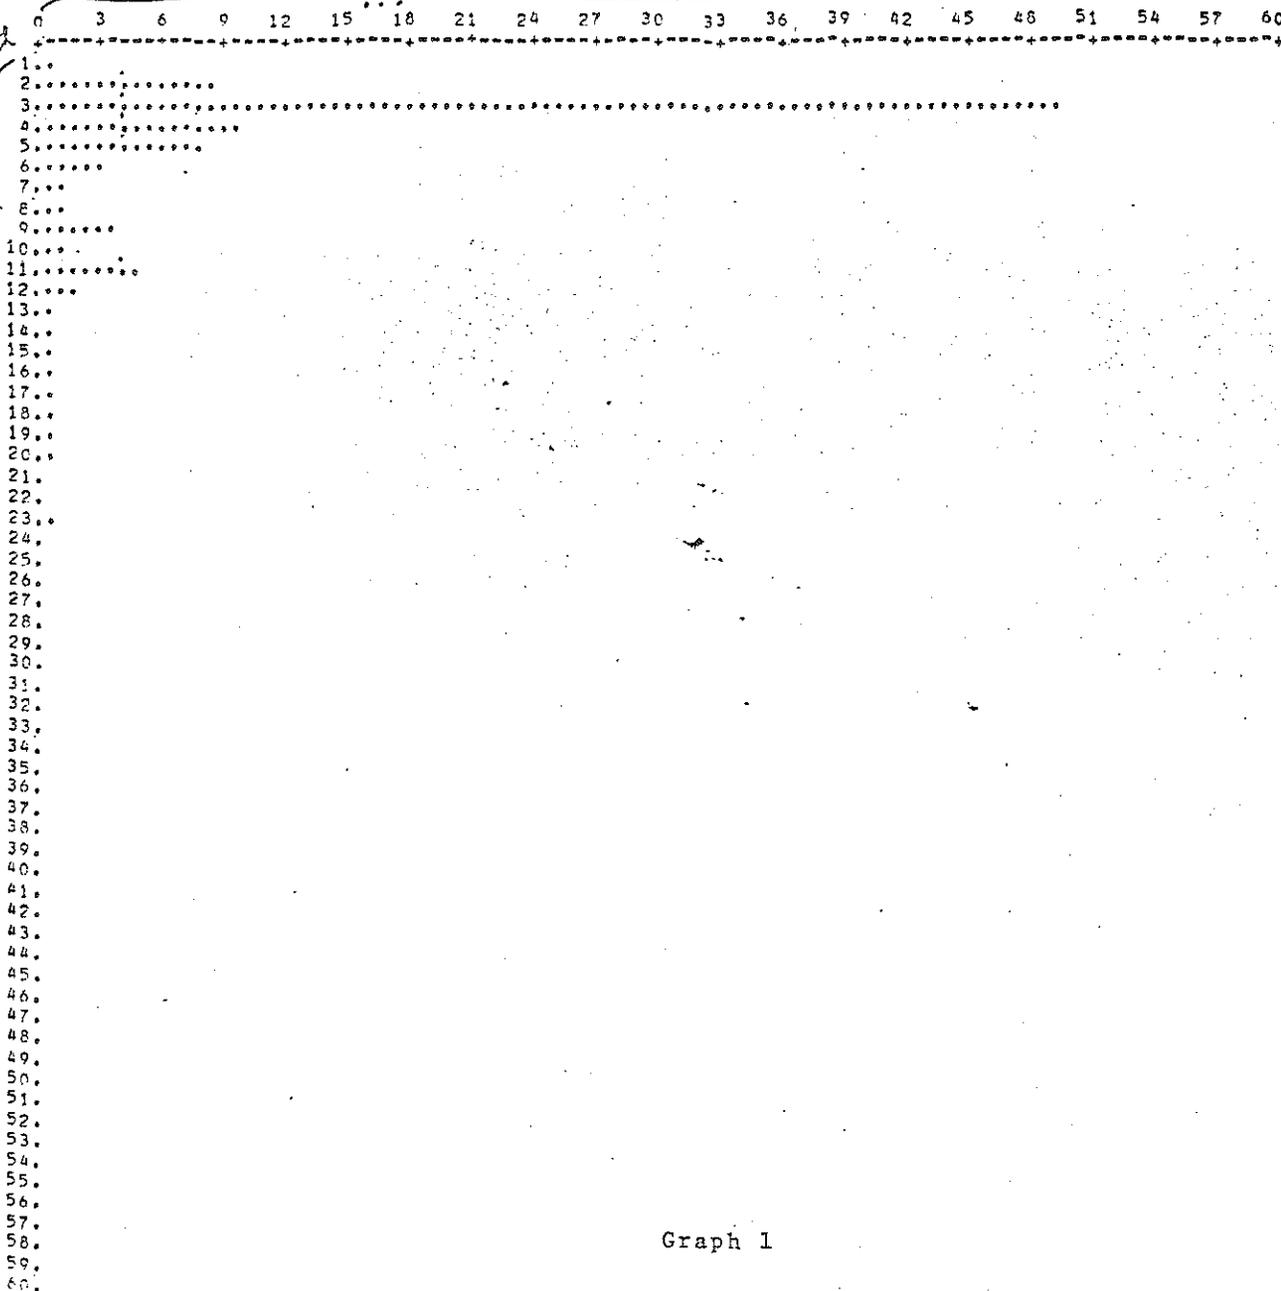

The numerical data from this program establishes the percentage of trips in specific travel time periods (See Graphs 1-6). The vertical axis, on the graphs, represents travel time in ten minute segments and the horizontal axis is the percentage of trips traveling in each specific time period.

Statistical information such as mean and standard deviation is printed at the end of graph. The average travel time of the total number of trips (See Graph 1) was 56 minutes.

1975 FRANKENMUTH AREA TRAFFIC COUNTS

In conjunction with the O & D Study, traffic volume counts were taken from Monday, June 7, 1975 through Wednesday, June 9, 1975. Traffic volume counting station locations and traffic volume counts are shown on Tables 18 and 19. (See Map 2 to find intersections where traffic volume counts were taken).

1975 FRANKENMUTH AREA TRAFFIC COUNTS

STATION LOCATIONS

<u>STATION</u>	<u>LOCATION</u>
3602	M-83, 100' S. of Genesee St.
3601	M-83, 100' N. of Genesee St.
3603	E. Genesee St., 100' E of M-83 (Main St.)
3604	W. Genesee St., 100' W of M-83 (Main St.)
118	M-54/M-83, .1 mile E. of Dehmel Rd. (1.3 mile E. of I-75)
95	M-54, .2 mile S. of Jct M-54/M-83 (Birch Run Rd.)
119	M-83, .2 mile N of Jct M-54/M-83 (Birch Run Rd.)
335	Birch Run Road, E. of Jct. M-54/M-83 (Birch Run Twp.)
3613	M-83 (Main St.), 100' S of Jefferson St.
3607	M-83 (Main St.), 100' N of Jefferson St.
3614	Jefferson St., W of M-83
3608	Weiss/Jefferson St., Cutoff between Weiss & Jefferson
3610	M-83 (Main St.) 100' S of Tuscola St.
3600	M-83 (Main St.) 100' N of Tuscola St.
3611	W. Tuscola St., 100' SW of M-83 (Main St.)
3612	W. Tuscola St., 100' NE of M-83 (Main St.)
97	M-83, .1 S of King Road
571	M-83 (Gera), .1 mile S of Bradley Rd.
576	King Road, W of M-83
577	King Road, E of M-83

FUTURE STUDY PLAN

The MDSH&T Region 7 Planning Unit in conjunction with the regional and local Frankenmuth area authorities, has undertaken the task of collecting material and data so a comprehensive area transportation plan can be developed. Part I of the Frankenmuth Area Transportation Plan consists of the 1975 Frankenmuth Origin and Destination Study.

Part II of the Frankenmuth Area Transportation Plan will include land use, population, highway capacity, and other related information and projections. This study will aid planning units in establishing priorities for future study needs.
