

MDOT PART NUMBER	<u>LIST OF MATERIALS</u>
M-01	Winged anchor assembly 2 1/4" x 36" - 2 1/2" x 18" for soil installation
M-02	Assembly, square post breakaway 2 3/16" 10 ga.
M-03	Post, inner 2 3/16" x 7' 10 ga.
M-04	Post, outer 2 1/2" x 14' 10 ga.
M-05	3/8"- 16 x 3", grade 5 hex head steel bolts with nuts (5 each)
M-07	Assembly, ball bearing plate
M-08	1/2"- 13 x 3" stainless steel hex head bolts with nuts & washers
M-11	5/16"- 18 grade 5 large corner bolt with nut
M-12	3/8" aluminum drive rivet (use with type iii signs only)
M-13	Assembly, square post breakaway 2 1/4" x 36", 12 ga. for concrete installation

#### NOTES:

- 1. Refer to the wind-load charts (sheet 11 of 14) for appropriate sign post installation.
- The anchor M-01 is used for soil and the m-13 is for concrete installation.
- M-12 rivets are used for Type III signs only. refer to installation instructions (sheet 9 of 11).
- Quantity of materials used for the single post installation will be increased according to the number of posts required for proper sign placement.

### INSTALLATION CHECKLIST Install the appropriate anchor assembly (a) into the ground and align with the traffic flow (see figure 1). $\hfill\Box$ a) For concrete installation (required in weak soil), a $32^{\prime\prime}$ deep and $8^{\prime\prime}$ minimum diameter hole is required for concrete footings. b) For standard soil installation, attach soil stabilizer (b) to the anchor (a) and fastened with two 3/8" corner bolts (M-11) and two 3/8" nuts (M-11a) through the 7th and 12th hole from the top of anchor (as shown). $\square$ 2. Install anchor assembly allowing only two holes above grade. ☐ 3. Slide 6" stub (c) of breakaway assembly into anchor assembly having the bolt location align with traffic flow(see figure 1) and fasten with two 3/8" $\times$ 3" bolts (M-05) and nuts (M-05a). ☐ 4. If breakaway assembly is pre-assembled, proceed to step $\square$ 5. Place the ball bearing assembly (M-07) on the 6" stub $\hfill\Box$ 6. Place the 18" stub (f) on top of the ball bearing (e) with the 3 hole side of (f) facing oncoming traffic. $\square$ 7. Align the 18" stub (f), the ball bearing (m-07) and the 6" stub (c). $\square$ 8. Slide each flat washer (M-08b) on each of the three inverted $1/2" \times 3"$ stainless steel bolts (M-08). M-08B Insert above bolt (M-08) with flat washer (M-08b) up through notched hole of assembly (c), (M-07) and (f). M-08 $\square$ 10. Place the second flat washer (M-08b) down on to the above bolts (M-08). $\square$ 11. Complete by fastening the stainless steel ny-lock nut (m-08a) to the stainless steel bolt (M-08) and tighten snugly down against the top flat washer (M-08b). □ 12. Repeat step 9, 10 & 11 on the two remaining notched holes of the triangular points. $\square$ 13. After fastening all hardware, torque the three 1/2" stainless steel ny-lock nuts (M-08a) in a circular pattern to 40 ft-lbs maximum. $\square$ 14. Slide appropriate upright post assembly (h), (refer to the allowable sign area per post/windload charts), on the 18" stub (f) of breakaway assembly and fasten with three $3/8" \times 3"$ bolts (M-05) and nuts (M-05a). TRAFFIC FLOW 1/8" Wel 1/8" Weld FIGURE 1. TO BE USED FOR MAINTENANCE PURPOSES ONLY NOT TO SCALE

#### INSTALLATION INSTRUCTIONS

- 1. Check with utility companies to mark anchor and post location
- Orientate anchor for correct sign placement (see figure 1, sheet 8 of 14).
- Use drive cap to install anchor half way, check for plumb.
- Continue to install anchor until two holes are remaining above surface level.
- Remove drive cap.
- Install sign on post using mdot approved hardware for Type II signs and aluminum rivets for Type III signs.
- 7. Insert post with sign into anchor six holes deep.
- See Sign-100-Series and Sign-120-Series for appropriate bottom height.
- Use corner bolt to fasten anchor and post.
- Following these procedures the post and anchor will be installed according to

#### PERFORATED STEEL SQUARE TUBE SIGN BREAKAWAY SYSTEM SPECIFICATIONS

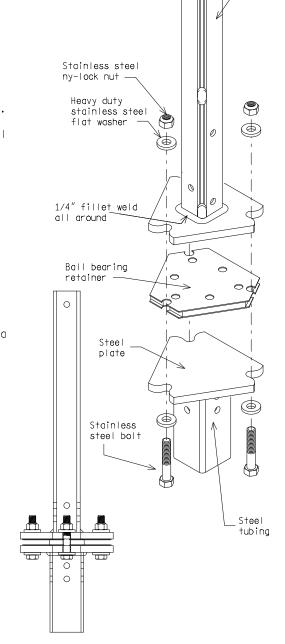

The breakaway system is designed to allow a traffic sign to breakaway near ground level upon impact by a vehicle. The breakaway system conforms to nchrp 350 standards for breakaway sign supports.

Basic Types: Triangular, three bolt base.

Basic Components:

Top coupling, middle ball bearing retainer, bottom coupling, and clamping bolts including nuts and flat washers.

- 1. Top coupling consists of a 1-1/2" square steel tube (12 ga. wall @ 18-1/4" long) and (2) 1-1/2" 12 ga formed steel angles @ 18" long welded to a 5/8" triangular steel plate.
- 2. Bottom coupling consists of a 2" square steel tube (1/4" wall @ 6" long) welded to a 5/8" triangular steel plate.
- 3. The top and bottom steel tubing are structural ASTM A500 Grade B with a minimum Yield Strength of 46,000 psi.
- The top and bottom 5/8" thick triangular steel plates are structural ASTM A572 Grade 50 with a minimum Yield strength of 50,000 psi.
- 5. Both top and bottom couplings are hot-dip galvanized (zinc coated) finished.
- Top and bottom triangular steel plates have a bolt circle diameter of 5-29/32".
- 7. Middle ball bearing retainer thickness: 1/2" maximum. Ball bearings are stainless steel and 7/32" diameter.
- 8. Clamping Bolt Type: 316 stainless steel with dry lubricant.
- Clamping Bolt Size: 1/2" diameter and 3" in length.
- 10. Steel nuts are 1/2" stainless steel ny-lock
- 11. Flat washers are 3/16" thick, 17/32"id,
- 12. Clamping Bolt Torque: 40 lbs-ft maximum.
- 13. No scheduled retorque is required.
- 14. Periodic inspection is recommended.

DESCRIPTION

# PERFORATED STEEL SQUARE TUBE SIGN BREAKAWAY SYSTEM FOR 90 MPH WIND SPEED

\*/\*\* The bottom height is defined as height from the near edge of the travel lane pavement to the bottom of the sign panel. See Sign-100-Series and Sign-120-Series for required minimum bottom height and support spacings.

#### NOTE:

For signs over 38 sq. ft use the charts on Sign-150-Series.

#### NOTES:

- 1. The materials and galvanized finish for the connection components (steel pipe, channels, square tube, stub & plate) shall be per the current MDOT Standard Specifications for Construction after fabrication.
- 2. All fastening hardware (bolts, nuts and washers) shall be galvanized to ASTM 153, full thread anchor bolt manufactured to ASTM A36 Mod55. Hex bolt manufactured to A307.
- 3. The adhesive anchoring system tested to ASTM E488.
- Pipe support suitable for a single sign connection with a maximum of 4 sq. ft. & a back to back sign connection with a maximum of 8 sq. ft.
- 5. Square tube support suitable for single sign connection with a maximum of 7.5 sq. ft. & a back to back sign connection with a maximum of 15 sq.ft.
- 6. Sign substrates shall be aluminum for ground mount and barrier connections per section 919 of the current Standard Specifications for Construction.
- 7. Concrete median barriers having a top width of 6" or wider shall use the concrete median barrier connection (square tube support).
- 8. Glare screen and barrier connections must be installed to ensure that either a pipe support or a square tube is plumb on the glare screen or concrete barrier wall.
