July 29, 1975

Mr. Sam F. Cryderman  
Deputy Director  
Bureau of Transportation Planning  
Department of State Highways  
and Transportation

Dear Mr. Cryderman:

The Highway Planning Division is pleased to present Volume XIV-B in the Statewide Transportation Modeling System Series. It documents an important addition to Michigan's planning data base: railroad commodity flow information.

The basic ingredient of transportation planning is the origin-destination survey. This report presents commodity O-D data for the Penn Central Railroad, summarized into a matrix of zone-to-zone flows. The zones used are those of Michigan's Statewide Transportation Modeling System. Thus, the potential has been created for railroad planning and analysis based on reliable O-D information, using the extensive capabilities of the Statewide System, which insures compatibility with previous and future highway and other-modal analyses performed on the Statewide System.

This report was prepared by Mr. Lawrence G. Scott of the Statewide Transportation Planning Procedures Section, under the supervision of Mr. Richard E. Esch.

Sincerely,

A handwritten signature in cursive ink that appears to read "R.J. Lilly".

R. J. Lilly, Administrator  
Highway Planning Division

# PREFACE

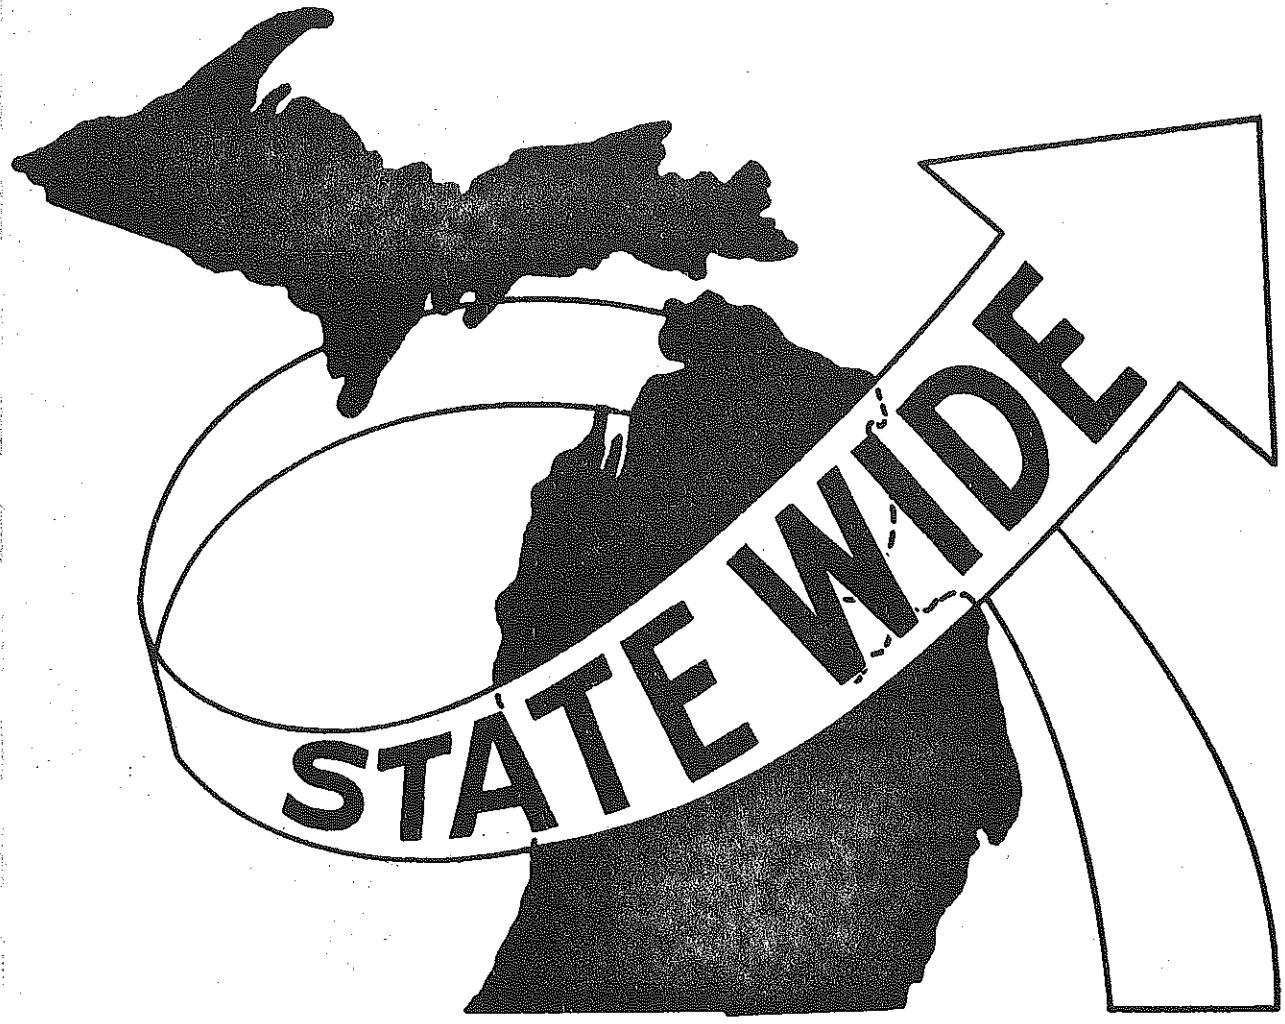

## PREFACE

In June 1970, the Penn Central Transportation Company, the nation's largest transportation company, filed for bankruptcy. Since that time, national attention has been focused on the plight of the entire rail system in the populous, industrial Northeast and Midwest region. Six other railroads have since filed for bankruptcy and in 1974, the federal government responded with the Regional Rail Reorganization Act of 1973. That law created the U.S. Railway Association, charged with developing a Final System Plan to reorganize rail service and dispose of bankrupt rail properties in the region.

The USRA Preliminary System Plan and public hearings generated considerable controversy in the affected states. Criticism has been leveled at the USRA analysis especially with regard to the analysis of lines labeled "potentially excess", and for good reason: if all such lines labeled potentially excess were abandoned, Michigan's entire ten-county northwest region would have no rail service.

Thus, the Michigan Department of State Highways and Transportation needs to develop its own planning capabilities and data base in the rail transport area at the systems level. This report signals an important step: a matrix of commodity flows for the bankrupt Penn Central Railroad.

# INTRODUCTION

# INTRODUCTION

Necessary to comprehensive rail planning at the systems level are three components:

- (1) a computer model of the rail network,
- (2) commodity flow data, and
- (3) passenger flow data.

Michigan's Statewide Transportation Modeling System already contains (1) a rail network, as described in Statewide reports, Michigan Goes Multi-Modal (Volume XIII) and 1972 Statewide Rail Network: Summary Tabulations.

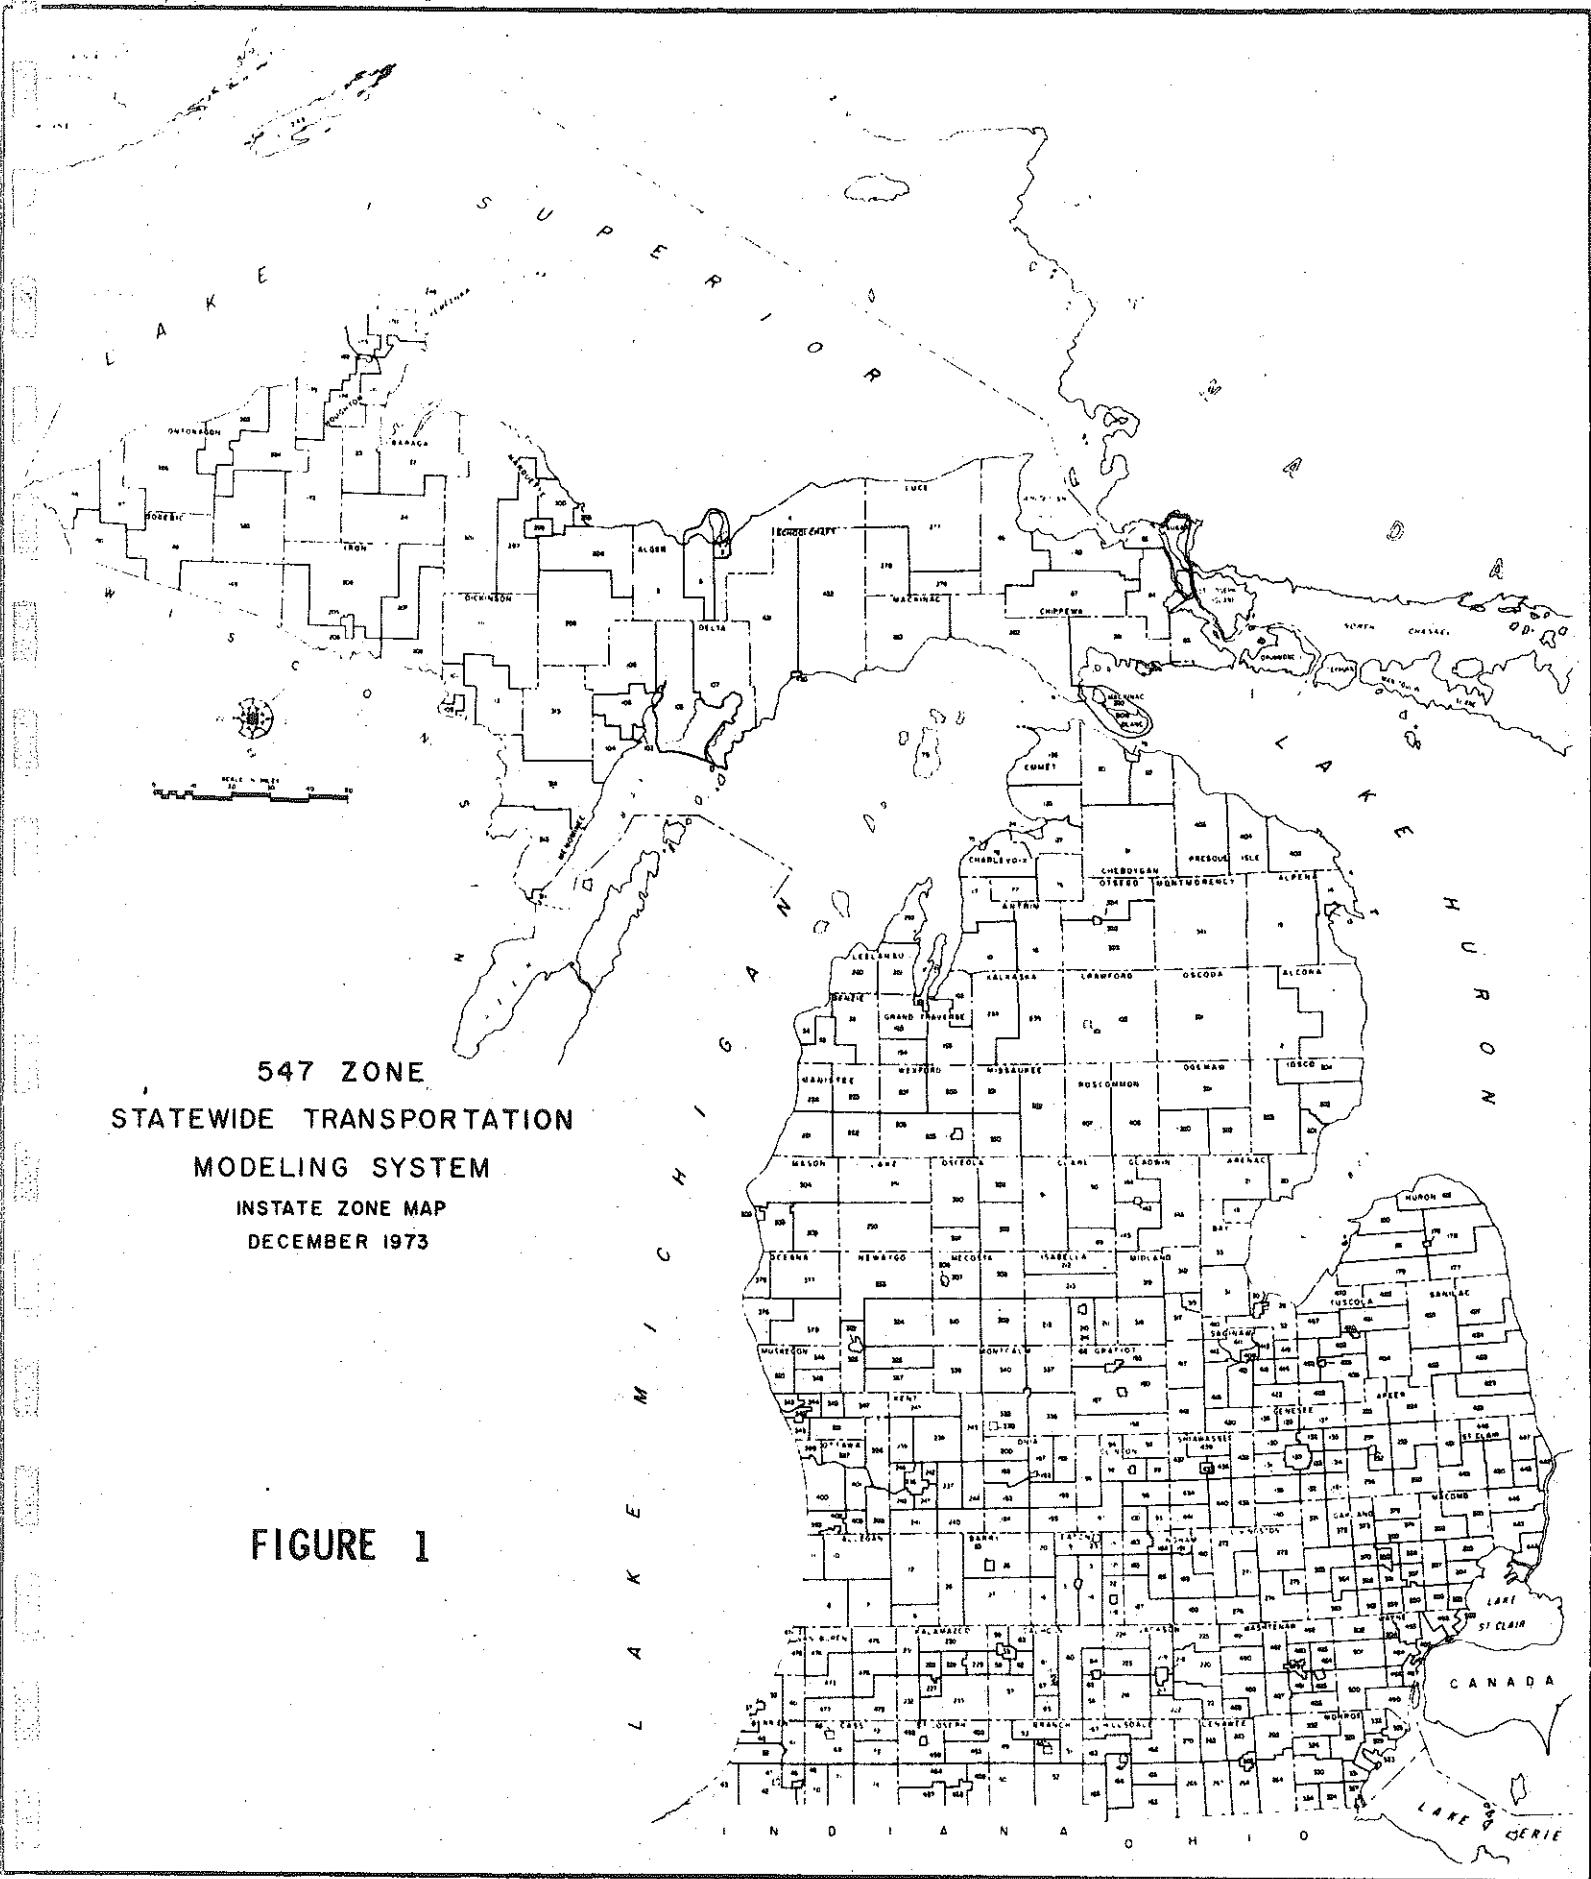

This report displays the addition to the Statewide System of (2) commodity flow data, for the Penn Central Railroad. The procedures described herein converted a 1973 100% waybill sample for the Penn Central line into a matrix of commodity flows from and to each of the 547 zones in Michigan's Statewide Transportation Modeling System (see Figures 1-3). This process produces commodity flow data for comprehensive rail planning, and insures that this and future railroad analysis will be compatible with analyses of highways and other modes and with the extensive socio-economic and facilities files contained on the Statewide System.

This report is Volume XIV-B in the Statewide Series of reports. Volumes XIV-A and XIV-C describe two other commodity flow matrices available on the Statewide System: XIV-A is a

# **COMMODITY FLOW MATRIX DEVELOPMENT**

# COMMODITY FLOW MATRIX DEVELOPMENT

The process for creating the commodity flow matrix occurred in three steps (illustrated in Figure 4):

- (1) building a file to match the SPLC (Standard Point Location Code) found on the waybill tapes to Michigan's 547 zone system;
- (2) matching the origin and destination SPLCs on the waybill file to zones, and
- (3) building the flow matrix.

The original SPLC master file contained: SPLC, a six-digit number; alphabetic place name, state, and county in the U.S.; and place name and province in Canada. The SPLC-to-zone file that was created included only Michigan, Wisconsin, Illinois, Indiana, and Ohio (see Figures 1 and 2). The Michigan SPLCs were matched by a FORTRAN program to the Statewide Auto-Coding Place File, and mismatches were corrected by hand. The four other states' zones are multi-county zones, so the FORTRAN routine simply matched county names to zones, requiring no manual correction.

The waybill file and the SPLC-to-zone file were matched by a second FORTRAN program. This routine assigned the distant out-of-state SPLCs to zones (see Figure 3) based on the first two digits of the SPLC. The Canadian zones were assigned by ranges of SPLCs (based on visual inspection of the Canadian portion of the original SPLC master file) in this program.

# FLOWCHART OF COMMODITY FLOW MATRIX DEVELOPMENT

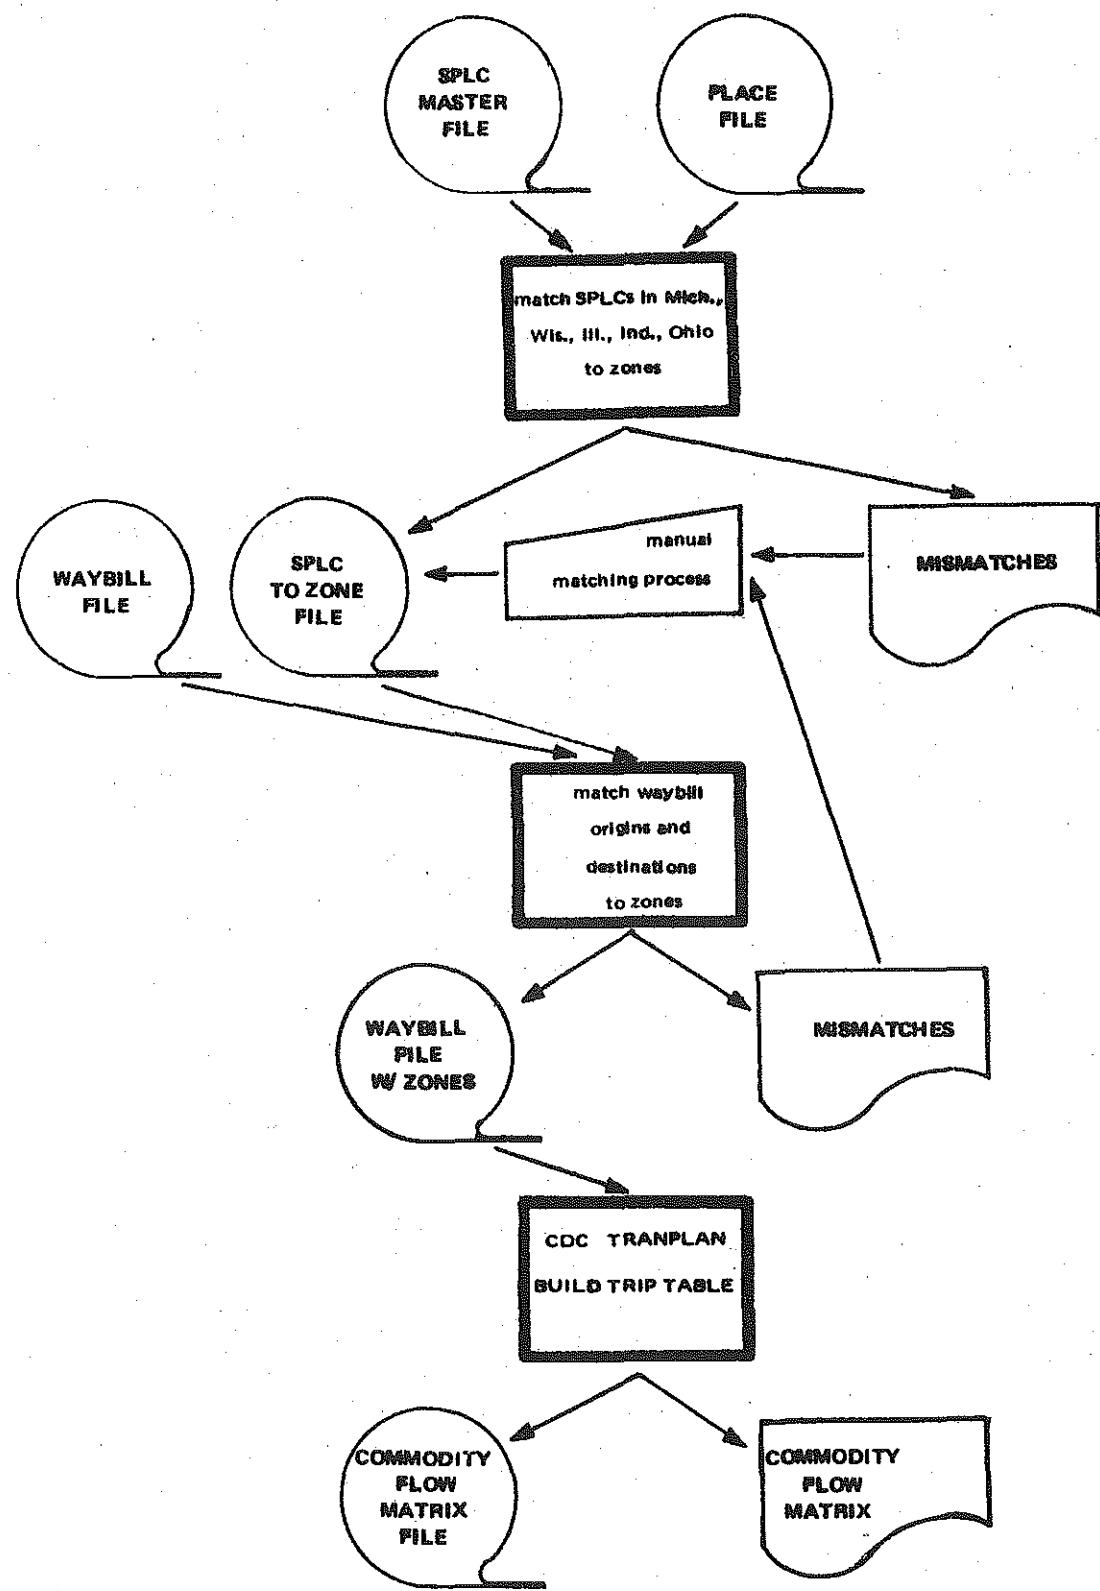

FIGURE 4

Entries for which SPLCs were missing were matched to zones manually utilizing a second place code on the waybill, the Freight Station Accounting Code (FSAC).

For the Penn Central railroad, the matching process was good: of the 627,325 entries on the waybill file, 2,050 could not be matched to statewide zones. Those entries, reproduced in Appendix III were missing SPLCs and could not be manually matched by FSAC.

To simplify data processing, zone-to-zone interchanges considered unlikely to move through Michigan were not included in the commodity flow matrix. The interchanges excluded are shown in Figure 5. The exclusion process eliminated 230,732 entries from the commodity flow matrix, but those entries are still available if needed for some future analysis.

Building the commodity flow matrix was accomplished using Control Data Corporation's DCO Tranplan Build Trip Table program. That program's output is presented in the following section.

## COMMODITY FLOW MATRIX

The matrix of commodity flows presented in Appendix I represents the movements of carloads of freight of all kinds from each zone to every other zone on the Penn Central Railroad in 1973, provided such movements impact Michigan. As such, it represents only a fragment of the data potential on the original waybill file. Other tables may be built to report tons, revenues, or short-line miles, rather than carloads. And any of the data items listed in Figure 6 may be used to sort out shipments by selected classes. For example, STCCs (Standard Transportation Commodity Codes) could be sorted on, to give an analysis of flows of commodities which are and are not transferable to truck.

Trip end summaries, such as that presented in Appendix II, may be generated from the commodity flow matrix to show the totals (cars, tons, revenues, short-line miles) originating and terminating at each zone.

Note the "PURPOSE 1" on the matrix and the trip end summary refers to the initial run, and represents all commodities.

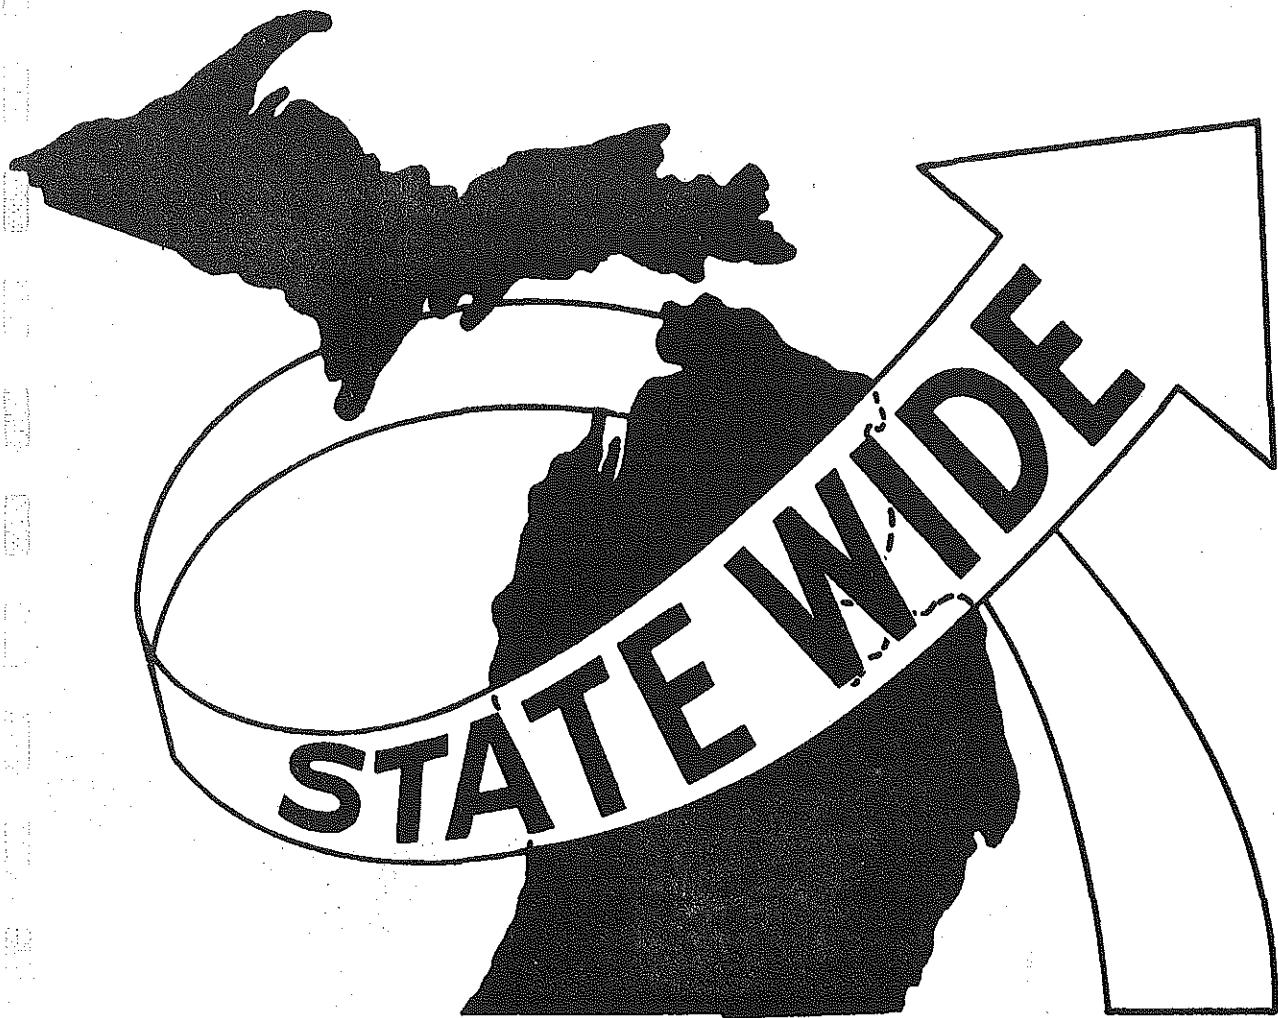

# DATA AVAILABLE FROM WAYBILL FILE

Penn Central Railroad 1973 100% Sample

1. Submitting railroad code (standard AAR code)
2. Special commodity class
  - 1 = farm, forest, and marine products
  - 2 = ores, minerals, and petroleum products
  - 3 = manufactured goods, except in 4
  - 4 = assembled transportation vehicles
  - 5 = misc. other
3. Traffic class
  - F = Forward
  - O = Overhead
  - L = Local
  - R = Received
4. Originating and terminating railroad code (standard AAR code)
5. Originating and terminating station (FSAC)
6. Originating and terminating SPLC
7. On and off junction (Rule 260)
8. On and off railroad code (standard AAR code)
9. Intermodal traffic indicator
  - O = Non - intermodal
  - I = Intermodal
10. Transit Indicator
  - O = Non - transit
  - I = Transit
11. Commodity (STCC)
12. Number of cars
13. Tons
14. Submitting railroad dollars
15. Shortline miles (submitting railroad)

FIGURE 6

# CONCLUSION

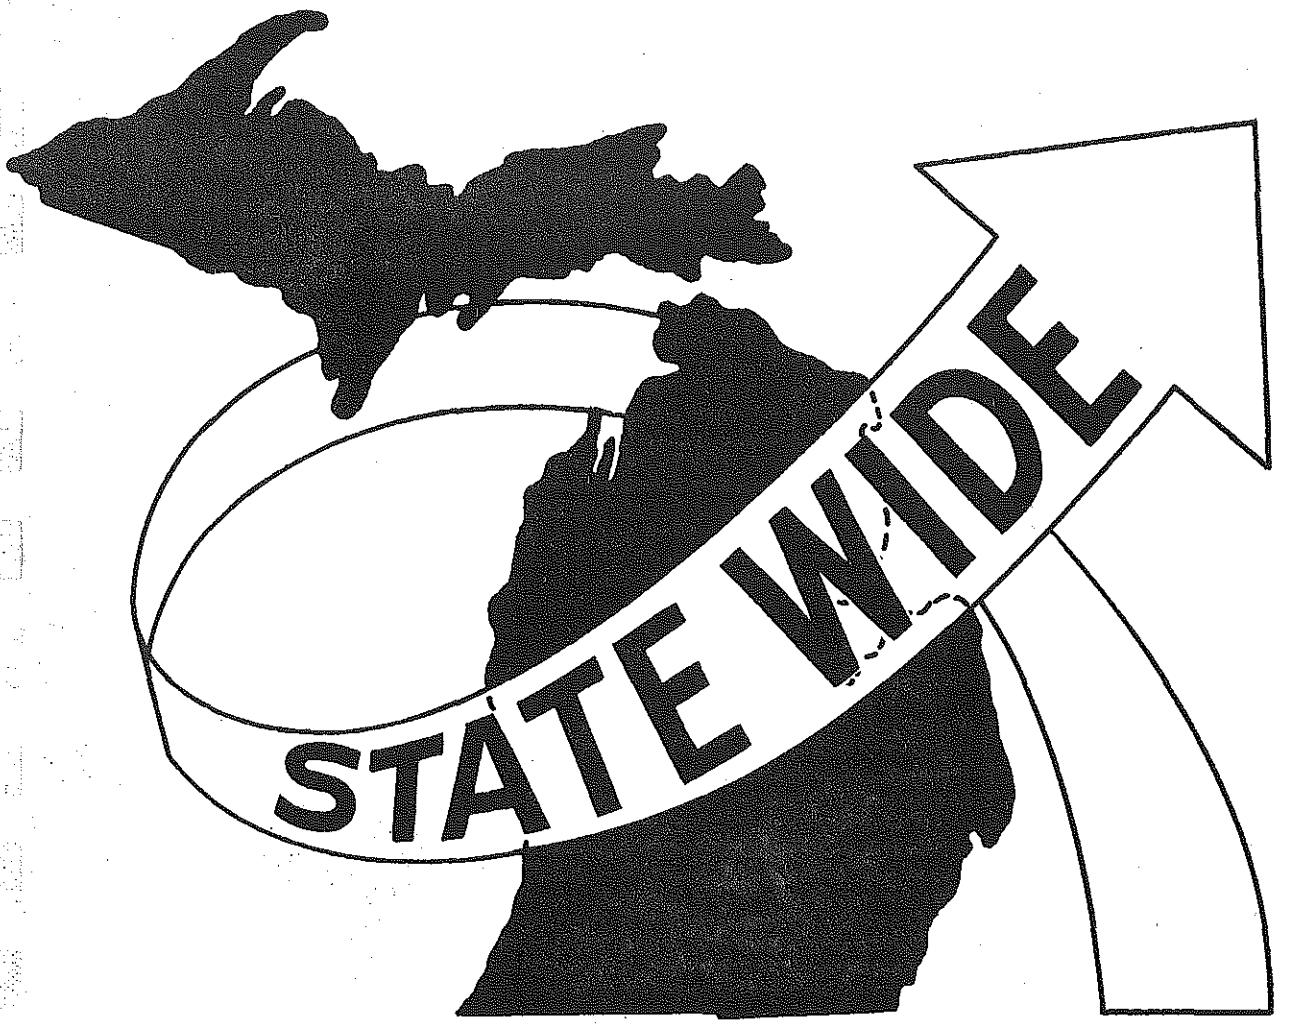

## CONCLUSION

A criticism of the USRA rail planning to date is that it has been done link by link, rather than at a system level. Michigan which stands to be greatly impacted economically and socially by the final outcome of the current rail reorganization, is moving toward a more comprehensive approach than that taken by USRA thus far.

Michigan's data base, as described in this series of reports, is quite good for rail commodity movements. When all commodity flow matrices are built, an accurate matrix of all commodity rail movements in Michigan will be available for assignment to the Statewide rail network. One of the first analyses to be performed with that data will likely be loading those commodities which are "truck transferable" and those which are not, to determine the impacts of rail abandonments. The viability analysis program developed by USRA to determine the economic viability of rail segments for its Preliminary System Plan, is also being implemented on the Statewide System. It will possibly be modified to better reflect Michigan's rail planning needs.

In short, Michigan's Department of State Highways and Transportation is rapidly building its planning capabilities and data base, to meet the challenge of providing planning information from Michigan to the Congress and the legislature to help structure a viable rail system.

## **APPENDIX III**

# DATA NOT INCLUDED IN COMMODITY FLOW MATRIX

PENN CENTRAL RAILROAD 1973 100% SAMPLE

1-243

Entries not included in the matrix:

(1) were missing origin or destination SPLC

AND

- (2) either (a) displayed a nonexistent railroad code  
or (b) displayed an FSAC outside the range of FSACs for the railroad displayed  
or (c) were missing FSAC  
for the trip end with missing SPLC.
