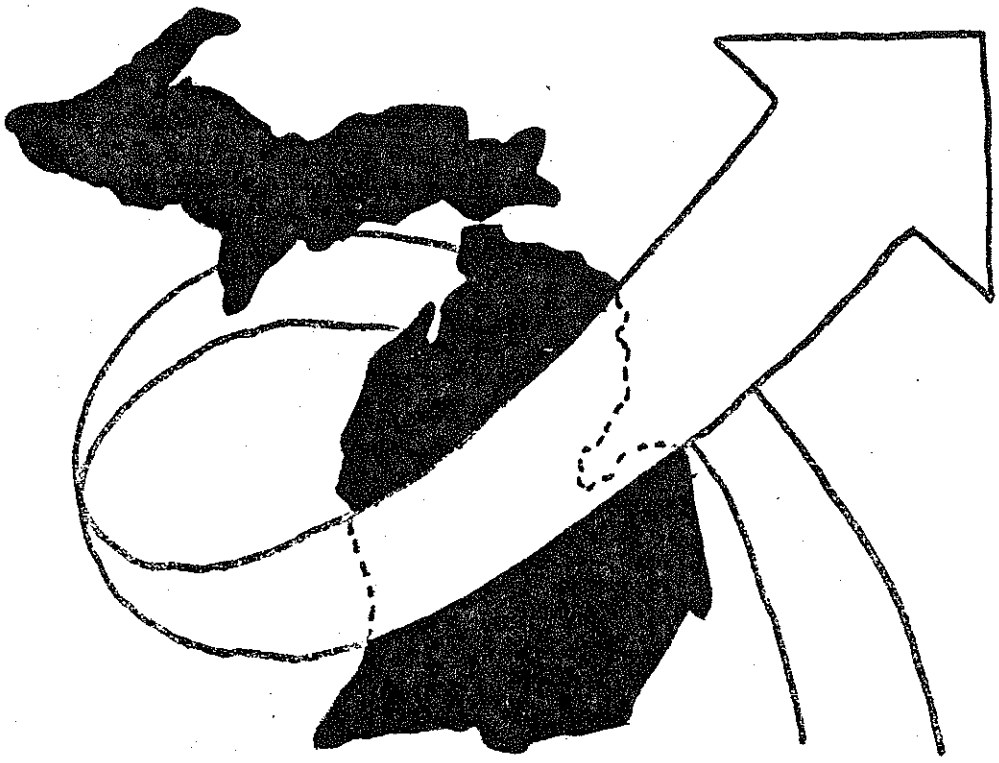
TABLE OF CONTENTS

PREFACE



PREFACE

This is the fifth in a series of reports dealing with the development of a statewide traffic forecasting model for the State of Michigan. The previous are as follows:

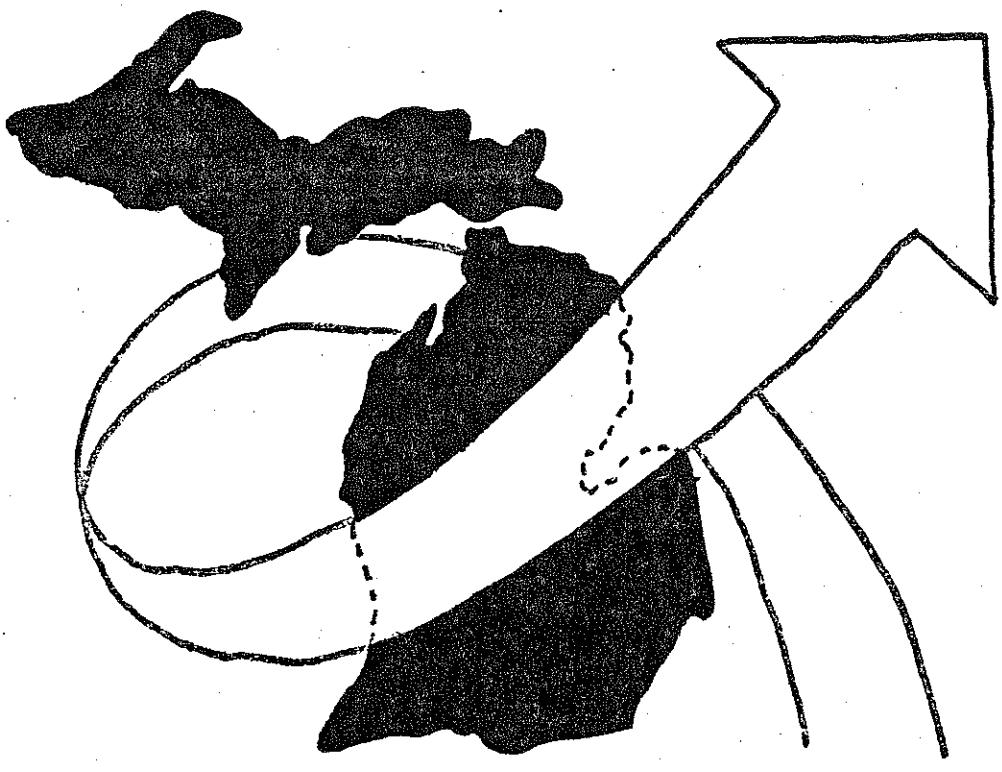
Volume I	Objectives and Work Programs
Volume II	Development of Network Models
Volume III	Multi-level Highway Network Generator-Segmental Model
Volume IV	Preliminary Model Calibration

Volume V will deal with the preparation of an origin-destination trip data bank, the development of a social-economic data bank, and the complex analysis process required to develop calibrated trip generation-distribution models at the statewide level. Because of the complexity of this process, Volume V will be sub-divided into the following five parts:

A. REFORMATION -- Trip Data Bank Preparation
B. Social - Economic Data Bank Development
C. Travel Characteristics' Analysis -- Preliminary Model Selection
D. Trip Generation Model Calibration
E. Trip Distribution Model Calibration

This report is Volume V - Part A. It will deal with the processes required to develop an origin-destination trip data bank. These processes are concerned with the selection of the data to be used, the preparation of correctly formated data, the problems incurred as the result of using multi-city urban data, and finally the reformation of the data for travel characteristics' analysis.

INTRODUCTION



INTRODUCTION

In July 1964, Arthur D. Little, Inc., Consultants, was retained to develop a highway requirements model for the State of Michigan. In latter 1966, the consultants completed a preliminary trip generation-distribution model for the Michigan Department of State Highways.

There are several approaches which might be used when obtaining travel information for use in developing a statewide traffic forecasting model. Listed below are a few of these approaches:

A. New external urban origin-destination data collection specifically for use in model development,

B. Use of previously collected single station rural origin-destination travel data,

C. New 1-2% statewide travel survey data, and

D. Use of previously collected urban origin-destination travel data.

Each of these approaches has its advantages and disadvantages. The method used depends directly on the condition of existing data resources and on each individual state's ability to collect new travel data. Michigan has chosen the latter approach, since origin-destination data has previously been collected for over forty urban areas in the state. This amounts to approximately 160 of the preliminary model's 540 analysis zones.

The data that Arthur D. Little used was obtained from ten Origin-Destination Studies (1960-1963) that had been

conducted by the Michigan Department of State Highways, and Detroit data obtained from the Detroit Area Transportation Study (1953). Since that time thirteen additional Major Origin-Destination Studies, three special studies (Tri-County, TALUS, Port Huron), and five Minor Origin-Destination Studies have been completed. The consultants had recommended that any new data be used to update and/or revise the preliminary trip generation-distribution model that Arthur D. Little had developed. "The first completed model must always be understood to represent the start of a new product, rather than the final version."[1]

The basic problem confronting any state using this approach is the fact that many of these studies often use different data collection formats and varying coding symbols from year to year. This report will deal with the basic data processing problems encountered while developing a standardized travel data bank for the State of Michigan's trip generation-distribution model calibration process.

All potential model users should note that the data collection or preparation process is often pushed aside as being one of the more insignificant tasks in the total model development. In reality this often becomes one of the most perplexing tasks in the total statewide model development process and in many situations becomes the single cause for a project falling behind schedule.

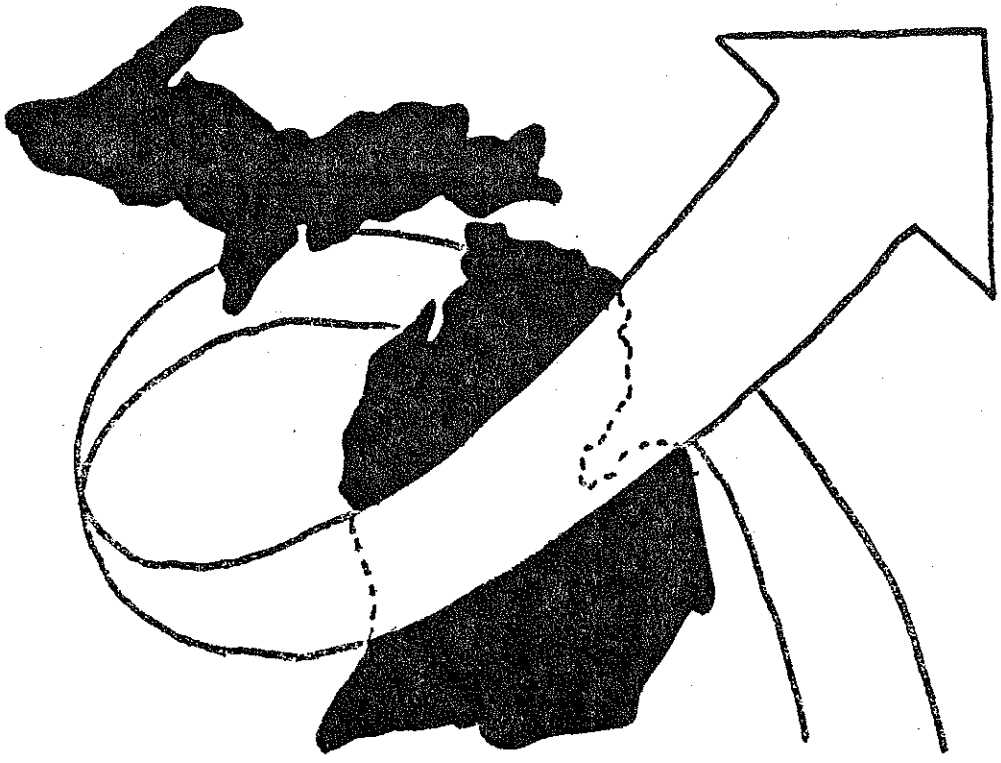
Development Costs



TRIP DATA BANK DEVELOPMENT COSTS

The development of this travel data bank began with a comprehensive survey of the amount and form of travel data available within the Michigan Department of State Highway. The results of this survey follows.

Ten study areas' data was available on 80 character hollorith cards. (500,000 RECORDS)

Thirteen study areas' data was available on magnetic tape. (1,500,000 RECORDS)

Ten minor study areas' data was available on magnetic tape. (100,000 RECORDS)

Three special study areas' data was available on magnetic tape each with different formats. (530,000 RECORDS)

Each of these basic trip data sources involved different data formats, and totally different coding symbols were used from year to year. All of the data was not even on magnetic tape which created additional problems. In the case of the special studies, the data had been created on computer equipment completely different from the department's seven track tape Burroughs machine..

A flow chart (Figure 1) of the process necessary to correct all of the various problems just mentioned appears on the following page. Before this project was completed it required the time of two highway transportation analysts and a computer programmer. One of the analysts worked full-time on the project for just under one year and the other two individuals spent more than a third of their time on

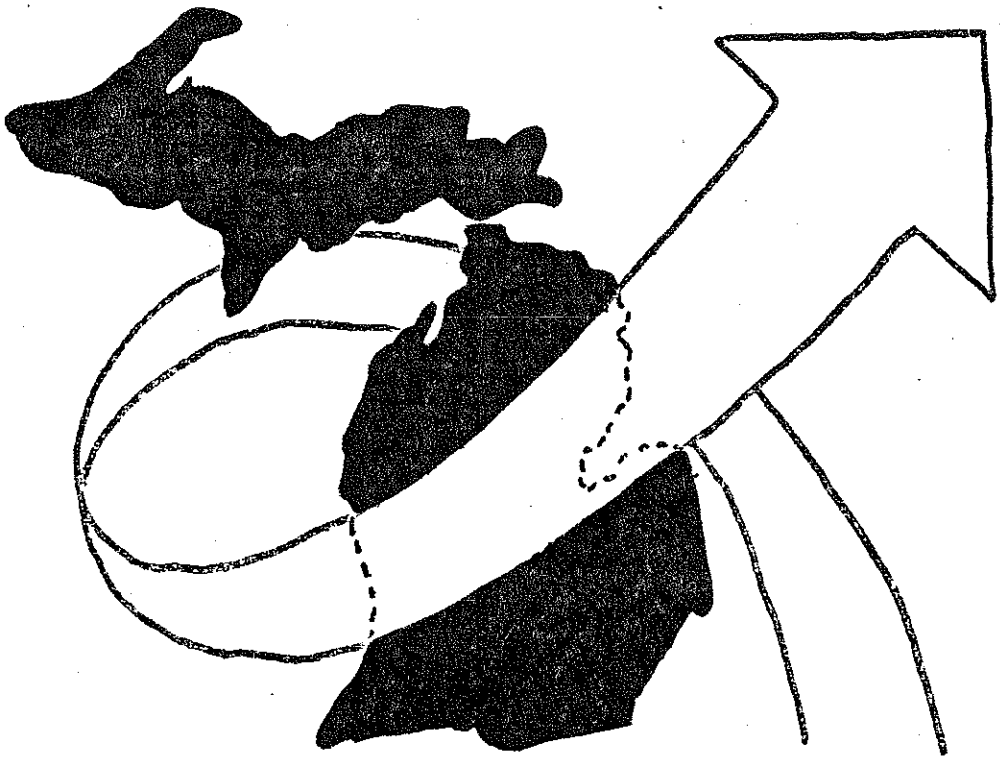
the project for just under one year and the other two individuals spent more than a third of their time on the project. Completion of the development of a reliable standardized travel data bank took fourteen months elapse time and approximately eighteen man-months of labor. The elapse time could have been shortened with additional man-power, but many of the problems encountered were of the type that just could not be planned for ahead of time.

The best use of time spent during the project was the initial familiarization with the data base and the development of a very thorough flow chart of each of the necessary steps required to standardized the data base. The following sections will deal with each individual step necessary to develop the standardized travel data base.

Data Selection & Preparation



DATA SELECTION AND PREPARATION

At the present time, there is data available from twenty-three Major Origin-Destination Studies, three Special Origin-Destination Studies, and five External Origin-Destination Studies. There is also the possibility of using Mississippi Valley Screen Data for five cities, which have a pseudo-cordon of Mississippi Valley Screenline Stations.

Because of data format differences, the Major Origin-Destination Studies must be divided into two groups -- those conducted from 1960 to 1963 and those conducted from 1964 to 1969. The cities involved in each of the five categories are listed below. Locations are illustrated on the following map. (Figure 2)

I. Major Origin-Destination Studies (1960-1963)

1. Ann Arbor - 1960
2. Ypsilanti - 1960
3. Benton Harbor-St. Joseph - 1960
4. Battle Creek - 1961
5. Allegan - 1961
6. Cadillac - 1961
7. Monroe - 1962
8. Alpena - 1962
9. Bay City - 1962
10. Niles - 1963

II. Major Origin-Destination Studies (1964-1969)

1. Sault Ste. Marie - 1964
2. Muskegon - 1964
3. Grand Rapids - 1965
4. Saginaw - 1965
5. Flint - 1966
6. Traverse City - 1966
7. Kalamazoo - 1966
8. Adrian-Tecumseh - 1967
9. Jackson - 1967

2. Dowagiac - 1966
3. Caro - 1966
4. Eaton Rapids - 1966
5. Grand Ledge - 1966

In data preparation the first obstacle to be overcome is the differences in data formats. Each category---and each city in catetory III---has its individual record form A standard format must be agreed upon and the data must be converted to this standard.

The 200-character combined format is used for all current Origin-Destination Studies. This format is compatible with computer programs used in the transportation planning area of the Michigan Department of State Highways.

This format was in use for the cities in the second category--Major Origin-Destination Studies (1964-1969)--which involves the most data. Therefore, the 200-character combined format (Figure 3a-3b) will be considered the standard.

Coding must also be standardized. Again the second category will be used as the standard. The standard coding for the external, internal, and truck-taxi records is included in Appendix A.

The first category--Major Origin-Destination Studies (1960-1963)--involves almost 500,000 external/internal/truck-taxi trip records. This trip data was originally on 80-column Hollerith cards. These cards had to be transferred to tape in the 80-column format (Figure 4a-4b-4c). A special computer program was written to reformat the data to the 200-character combined format and to standardize the coding. The only coding change was in Vehicle Type Code for the external records as follows:

Category I Code	Vehicle Type	Standard Code
1	Passenger Car	1
2	Single Unit-Single Rear Tire	2
3	Single Unit-Dual Rear Tire	3
4	Single Unit-3 Axle	4
5	TT-ST Combinations	5
6	TT-ST-TR or TK-TR Combinations	7
7	Bus (Not C.C.)	8
8	Taxi	9
9	Compact Cars	1
0	Small Cars	1

Code 6 in Vehicle Type of the Category I coding was a combination of code 6 (TK-TR Combinations) and code 7

Coded ________ Date ________ Checked ________ Date ________

(TT-ST-TR Combinations) of the standard codes for Vehicle Type. After reviewing vehicle classification counts, TT-ST-TR Combinations (code 7) were found to occur almost eight times to every one time for TK-TR Combinations (code 6). Therefore, standard code 7 was chosen to more accurately represent TT-ST-TR of TK-TR Combinations. Code 9 (compact cars) and code 0 (small cars) were both changed to standard code 1 passenger cars).

The second category--Major Origin-Destination Studies (1964-1969)--involves over 1,500,000 external/internal/ truck-taxi trip records. This trip data was relatively free of problems. The data was in the 200 character combined format, so no reformating was needed. The coding was standard for all cities except Sault Ste. Marie and Muskegon, which had the same coding change in the Vehicle Type Code for the external records as the data in Category 1 (see above). Other than this revision, the data for the second category was unchanged.

In Category III, each city had format and coding changes which had to be considered. A special computer program was written to convert the external trip records to the standard format and coding. This program had to be revised twice: once to handle the internal trip records, and once to convert the truck-taxi trip records for Tri-County, TALUS, and Port Huron.

The Tri-County Study involved 58,000 external trip records, 33,000 internal trip records, and 7,300 truck-taxi

trip records. Appendix B contains the tape formats and coding used by Tri-County for the external, internal, and truck-taxi records. All of these trip records had to be converted to the 200-character combined format and the standardized coding.

The external records were the first to be converted. Figures 5a - 5b are the 200-character format for the external trip records. Coding changes were made in Vehicle Type, Trip Purpose, and Land Use as follows:

Tri-County Code	VEHICLE TYPE	Standard Code
1	Passenger	1
2	Single Unit-Single Rear Tire	2
3	Single Unit-Dual Rear Tire	3
4	Single Unit-3 or 4 Axle	4
5	TT-ST Combinations	5
6	TT-ST-TR or TK-TR Comb.	7
7	Bus (not C.C.)	8
8	Taxi	9

This Vehicle Type coding change is the same as the Vehicle Type coding change for the data of Category I.

Tri-County	TRIP PURPOSE	Standard Code
1	Work	1
2	Shopping	3
3	Personal Business	2
4	School	6
5	Social, Recreation	5
6	Vacation	4
7	Change Mode of Travel	6
8	Eat Meal	6
9	Home	6
0	All Other	6

The standard codes for Trip Purpose consisted of six codes while the Tri-County codes for Trip Purpose included

SPECIAL INSTRUCTIONS:

10 codes. The four codes--School, Change Mode, Eat Meal, and Home--that did not agree with the standard codes were assigned standard Code 6 (All Other). This was the only possible solution because the remaining Tri-County codes matched the standard codes exactly.

Tri-County Code	LAND USE	Standard Code
1	Residential	10
2	Manufacturing I	20
3	Manufacturing II	30
4	Transportation, Comm. & Utilities	40
5	Trade	50
6	Services	60
7	Cultural, Entertainment, & Rec.	70
8	Resource Prod. & Extraction	80
9	Undeveloped Land & Water Areas	90

The standard land-use code consists of a two-digit code. The first digit signifies a major division of land-use. The second digit signifies a subdivision of the major category. For example, the code 12 represents residential-(1), group quarters-(2). The Tri-County code used only the major division codes 1-9. These codes were multiplied by ten to convert them to the standard land-use codes.

The Tri-County internal trip records were converted to the 200-character combined format (figures 6a-6b). The Tri-County internal trip record coding was converted to the standard coding.

Coding changes were made in Mode of Transportation, Trip Purpose, and Parking as follows:

SPECIAL INSTRUCTIONS:

Tri-County Code	MODE OF TRANSPORTATION	Standard Code
1	Auto Driver	1
2	Auto Passenger	2
3	Bus Passenger	3
4	School Bus	6
5	Taxi Passenger	4
6	Truck Passenger	5
7	Walk	0

The standard code and the Tri-County code consisted of the same modes of transportation, only the numbers assigned to each mode of travel were different.

Tri-County	TRIP PURPOSE	Standard Code
1	Work	1
2	Personal Business	2
3	Medical-Dental	8
4	School	4
5	Social-Eat	5
6	Change Mode	6
7	Shopping	3
8	Recreation	5
9	Home	0
0	Business	2

There existed some minor differences in trip purposes. The standard coding had a code Transact Business (2) which was a combination of Tri-County code Personal Business (2) and Business (0). Standard code 5 (Social, Recreation) replaced Tri-County - Social-Eat (5) and Recreation (8). There was a separate code for Eat Meal (7) in the standard coding, which was omitted.

Tri-County Code	PARKING	Standard Code
1	Street Free	1
2	Street Meter	2
3	Lot Free	3
4	Lot Paid	4
5	Garaged Free	6
6	Garaged Paid	6
7	Service or Repair	7
8	Resident Property	8
9	Cruising	Y
0	Not Parked	9

There were very few changes in the Parking codes. Tri-County code 5 (Garaged Free) and code 6 (Garaged Paid) were combined to concur with standard code 6 (Parking Garage). "Lot Municipal," standard code 5 was omitted because there was no comparable type of parking among the Tri-County codes. "Cruising" and "Not Parked" required only a change in the alphanumeric designations.

The last type of records to be converted to the standard format were the truck-taxi trip records. The 200-character combined format is illustrated in figures 7a-7b. The truck-taxi trip record coding had to be standardized.

Coding changes were made in only two areas, Vehicle Type and Trip Purpose as follows:

Tri-County	VEHICLE TYPE	Standard Code
1	Truck	See Truck Type
2	Taxi	9

Tri-County	TRUCK TYPE	Standard Code
1	Single Unit, Single Rear Tire	2
2	Single Unit, Dual Rear Tire	3
3	Single Unit, 3 Axle	4

SPECIAL INSTRUCTIONS:

4	TT-ST Combination	5
5	TT-ST-TR or TK-TR Comb.	7
6	Other	6

In the Tri-County coding scheme Vehicle Type consisted of two codes--Vehicle Type and Truck Type. If Vehicle Type was coded Truck (1), Truck Type had to be converted to the standard code. Tri-County code 5 (TT-ST-TR or TK-TR Combinations) was a combination of standard code 6 (TK-TR Combinations) and code 7 (TT-ST-TR Combinations). Standard code 7 was selected to represent Tri-County code 5 for reasons previously explained in Category I external Vehicle Type coding. Tri-County truck-taxi coding for Truck Type had a code 6 (Other). This code was arbitrarily assigned standard code 6 (TK-TR Combinations). This decision allowed the representation of all the standard truck codes. If Tri-County Vehicle Type was coded Taxi (2), this was converted to standard code 9 (Taxi).

Tri-County Code	TRIP PURPOSE	Standard Code
01	Work	1
02	Personal Business	3
03	Medical-Dental	3
04	School	3
05	Social-Eat Meal	3
06	Change Travel Mode	7
07	Shopping	2
08	Recreation and Ride	3
09	Home	3
10	Serve Passenger	3
11	Picking Up Goods	4
12	Delivering Goods	5
13	Pick Up and Deliver Goods	6
14	To Base of Operation	8
15	Service	7

Tri-County coding for trip purpose consisted of a more detailed breakdown than the standard coding. Tri-County codes 02,03,04,05,08,09, and 10 were combined to form standard code 3 (Personal Business). Tri-County codes 06 and 15 were converted to standard code 7 (Service and Other Work Connected). For the remaining Tri-County codes only numerical designations were changed to agree with the standard codes. The standard code 9 (Vacation) was omitted, because there was no realistic counterpart in the Tri-County coding.

The Detroit Regional Transportation and Land-Use Study (TALUS) involved 23,000 external trip records, 307,000 internal trip records and 39,000 truck-taxi trip records. Appendix C contains the tape formats and coding used by TALUS for the external, internal, and truck-taxi records. Port Huron Origin-Destination Study involved 28,000 external trip records, 23,000 internal trip records, and 4,000 truck-taxi trip records. These trip records had the same tape format and coding as the TALUS records (Appendix C).

The external records were converted to the 200-character combined format with three minor exceptions. The origin zone and destination zone were placed in the area designated origin tract-block and destination tract-block. This was done because TALUS zones contained 4 digits and the space provided for zone in the Standard format would accomodate

only 3 digits. TALUS and Port Huron used an 8-digit tract-block code. This origin and destination tract-block code was placed in a filler area of the 200-character combined format. The TALUS and Port Huron residence tract-block was omitted from the 200-character format because of space limitations. TALUS coding contained 8 digits and the standard format provided only 6 digits. Figures 8a-8b provide the new 200-character combined format for the TALUS and Port Huron external trip records.

The changes involved in converting the TALUS and Port Huron external records to the standard coding were more extensive than the coding changes in the previous cities. Coding changes were made in responses for Day of Week, Vehicle Type, Hour Period, Trip Purpose, and Stop Purpose as follows:

C.U.S. Code	DAY OF WEEK	Standard Code
1	Monday	2
2	Tuesday	3
3	Wednesday	4
4	Thursday	5
5	Friday	6
6	Saturday	7
7	Sunday	1

Only the numerical designations for the Day of Week had to be changed.

C.U.S. Code	VEHICLE TYPE	Standard Code
1	Passenger Car - Michigan	1
2	Passenger Car - Non-Michigan	1
3	Single Unit-Single Rear Tire	2
4	Single Unit - Dual Rear Tire	3
5	Single Unit - 3 or more axles	4
6	Combinations	5
7	Bus	8
8	Taxi	9

SPECIAL INSTRUCTIONS:

The Center for Urban Studies code 6 (combinations) is a combination of standard codes 5 (TT-ST combinations), 6 (TK-TR combinations) and 7 (TT-ST-TR combinations). Again vehicle classification counts were reviewed. Standard code 5 (TT-ST combinations) was the prevalent code - occurring 8 times as often as code 6 (TK-TR combinations) and code 7 (TT-ST-TR combinations) combined. For this reason, standard code 5 was selected to represent C.U.S. code 6 (combinations).

C.U.S. Code	Hour Period	Standard Code
12M - 01A	Midnight	01
01A - 02A		02
.		.
.		.
.		.
11A - 12N	Noon	12
12N - 01P		13
.		.
.		.
.		.
11P - 12M		24

The Center for Urban Studies coded Hour Period using a twelve-hour clock and A, P, N, and M to represent AM, PM, noon, and midnight. These codes had to be converted to the 24-hour clock-military time--which is used in the standard coding.

C.U.S. Code	Trip Purpose	Standard Code
1	Home	6
2	Work	1
3	Personal Business	2
4	Social-Recreation	4
5	Eat Meal	6
6	Shopping	3
7	School	6
8	Change Mode	6
9	Serve Passenger	6

The Center for Urban Studies used a more detailed classification of Trip Purpose for Port Huron and TALUS than the standard coding. Trip Purposes 1 (Home), 5 (Eat Meal), 7 (School), 8 (Change Mode), and 9 (Serve Passenger) were grouped together under standard code 6 (All Others). The Center for Urban Studies code for "Social-Recreation" (4) is a combination of two standard codes--"Vacation" (4) and "Other Social-Recreation" (5). At the present time, standard code 4 (Vacation) will represent "Social-Recreation." At a later date, trip length will determine the division of this category into "Vacation" (4) and "Other Social-Rec." (5). The remaining codes were identical to the standard codes, only the numerical designations had to be changed.

C.U.S. Code	Stop Purpose	Standard Code
1	Course of Work	1
2	Personal Business	2
3	Shopping	8
4	Vehicle Service	5
5	Secure Lodging	7
6	Serve Passenger	6
7	Eat Meal	4
8	Recreation	3

For the category Stop Purpose all of the Center of Urban Studies Codes corresponded to the standard codes. Only the numerical designations had to be changed.

The TALUS and Port Huron internal records were converted to the 200 character combined format with three minor exceptions. The origin zone and destination zone were placed in the area designated Origin Tract-Block, as

previously explained with the external records. As with the external records, the origin and destination tract-block was placed in a filler area of the 200-character combined format. The interview number was placed in the residence tract-block area. The TALUS and Port Huron internal records' format is given in figures 9a-9b.

The TALUS and Port Huron Internal Trip Record coding had to be converted to the standard internal coding (Appendix A). These coding changes involved Mode of Travel, Trip Purpose, Parking and Day of Week as follows:

C.U.S. Code	Mode Of Travel	Standard Code
1	Auto Driver	1
2	Auto Passenger	2
3	Truck Passenger	5
4	Taxi Passenger	4
5	Bus Passenger	3
6	School Bus Passenger	6
7	Railroad Passenger	
8	Air Passenger	
9	Other to Work	

The Center for Urban Studies codes 1-6 for Mode of Travel corresponded to standard codes 1-6, with a few differences in numerical designations. Center for Urban Studies codes 7-9 had no corresponding standard code. When these codes occurred, the standard code on the 200-character combined format was left blank.

C.U.S. Code	Trip Purpose	Standard Code
1	Home	0
2	Work	1
3	Personal Business-Medical	2
4	Social-Recreation	5
5	Eat Meal	7
6	Shopping	3
7	School	4
8	Change Mode	6
9	Serve Passenger	9

SPECIAL INSTRUCTIONS:

In the standard coding Center for Urban Studies code 3 (Personal Business-Medical) was divided into "Transact Business" (2) and "Medical-Dental) was divided into "Transact Business) was selected to represent Center for Urban Studies "Personal Business-Medical" (3). The remaining codes differed only in numerical representation.

C.U.S. Code	Parking	Standard Code
1	Free	1
2	Paid - Meter	2
3	Paid - Other	4

The standard coding consisted of twelve categories. (Lot Paid), Standard code 4, was selected to replace Center for Urban Studies code 3 (Paid-Other). The remaining two C.U.S. codes were exactly the same as the standard codes.

C.U.S. Code	Day of Week	Standard Code
1	Monday	2
2	Tuesday	3
3	Wednesday	4
4	Thursday	5
5	Friday	6

Only the numerical representation of the Day of Week had to be revised.

The TALUS and Port Huron Truck-Taxi records had to be converted to the 200-character combined format. The same exceptions were true for the Truck-Taxi Trip Records as were true for the Internal Trip Records. Figures 10a - 10b provide the new 200-character combined format for the TALUS and Port Huron Truck-Taxi Trip Records. Coding changes were needed in two categories -- Trip Purpose and Day of Week.

SPECIAL INSTRUCTIONS:

These coding changes are as follows:

C.U.S. Code	TRIP PURPOSE	Standard Code
1	Pick up Goods	4
2	Deliver Goods	5
3	Pick up and Deliver	6
4	Service	7
5	Garaging Address & Base of Oper.	1
6	Base of Operations Only	8
7	Garaging Address Only	1
8	Personal Business	3
9	Shopping	2
A	Recreation	9

Center for Urban Studies codes 5 (Garaging Address and Base of Operations) and 7 (Garaging Address Only) were assigned standard code 1 (To and From Work). The alphanumeric designations were changed for the remaining Center for Urban Studies codes.

C.U.S. Code	Day of Week	Standard Code
1	Monday	2
2	Tuesday	3
3	Wednesday	4
4	Thursday	5
5	Friday	6

The numerical representations had to be revised. This was the only change to Day of Week.

One problem was encountered in converting the TALUS trip description records had no Vehicle Type. The taxi trip records could be distinguished from the truck trip records by a deck number, but the type (light or heavy) of truck could not be determined. According to Arthur D. Little, Inc.'s preliminary travel analysis, a separate trip generation-distribution model was needed for heavy trucks.[2]

[2]Appendix I, A Computer Model for Determining Future Highway Requirements of the State of Michigan, Vol. I, ADL, Inc. 1966, Page 35.

Further breakdown of the truck trip records was necessary. This presented a definite problem which had to be solved. Total trip weight was available from the TALUS truck trip records. It was decided that trip weight would differentiate light trucks from heavy trucks. After reviewing Michigan Department of State Highways' weight studies, the division point was determined at five tons. Any truck whose total trip weight was less than 10,000 lbs. was considered a light truck. Light trucks could be considered either standard code 2 (Single Unit-Single Rear Tire) or standard code 3 (Single Unit-Dual Rear Tire). Light trucks were assigned standard code 2 for identification purposes. Any truck whose total trip weight was greater than five tons was considered a heavy truck. Again only for identification purposes, standard code 5 (TT-ST combinations) was assigned to represent heavy trucks.

Category IV - External Origin-Destination Studies - consists of external trip data for five cities. These cities did not have an internal or truck-taxi trip survey. This is the reason for considering them as a separate category. 80,000 external trip records are involved in Category IV. These five studies were already in the 200-character combined format. The coding used was also standard. No conversions were necessary for the data in Category IV.

The final category - Mississippi Valley Screen Stations consisted of travel data from five cities. Each of these

cities had a pseudo-cordon of at least four Mississippi Valley Screen Stations. Over 35,000 external trip interviews were involved in Category V. These interviews were taken using the Mississippi Valley Multiple Screenline Station interview forms (Figure 11). This data had never been edited. A computer program was written to edit and reformat this data. This program edited the Mississippi Valley data for invalid trip purpose, invalid vehicle type, invalid direction, etc. This program also replaced the origin-destination longitude and latitude with a statewide zone number through use of a place-code file. The data was reformated to a somewhat standard format. Figures 12a - 12b provide the new 200-character combined format for the Mississippi Valley data.

The only coding change for the Mississippi Valley data involved Vehicle Type as follows:

Category V Code	Vehicle Type	Standard Code
11	Passenger Car - Local	
12	Passenger Car - Other	1
13	Passenger Car - Out-of-State	1
21	Single Unit Truck - Single Rear	2
22	Single Unit Truck - Dual Real	3
23	Single Unit Truck - 3 Axles	4
33	TT-ST -3 Axles	5
34	TT-ST - 4 Axles	5
45	TT-ST-TR - 5 Axles	7
46	TT-ST-TR - 6 Axles	7
54	TK-TR - 4 Axles	6
55	TK-TR - 5 Axles	6
62	Regular Bus - 2 Axles	8
63	Regular Bus - 3 Axles	8
64	School Bus	8

The only difference between the Category V codes and the Standard codes were concerned with numerical designations.

SPECIAL INSTRUCTIONS:

After using the computer program written to edit and reformat the Mississippi Valley data, records that did not pass the edit had to be reviewed and corrected. In some cases, this review included going back to the original interview forms to correct the data. Figure 13 is an example of a single page of the error listing obtained from the edit program. This sheet also shows the corrections made to the trip records. All records that have an *(asterisk) on the right side had to be changed. Most of these records did not pass the edit because of origin/destination longitude and/or latitude even though they were valid trips through the original station. The only way to use these records was to change the station to allow the longitude and/or latitude to pass the edit. Therefore, the trip records for Category V are valid for analysis of trip exchange to/from the study city from/to other areas. These records can never be analyzed accurately by station of exit or entrance. The records on the example sheet that are crossed out were not corrected, because they are through trip records -- the study city is neither the origin or destination. At this time we are not concerned with through trips.

After these corrections, the data was ready for the next work phase -- the reformation of all the data for travel characteristics analysis.

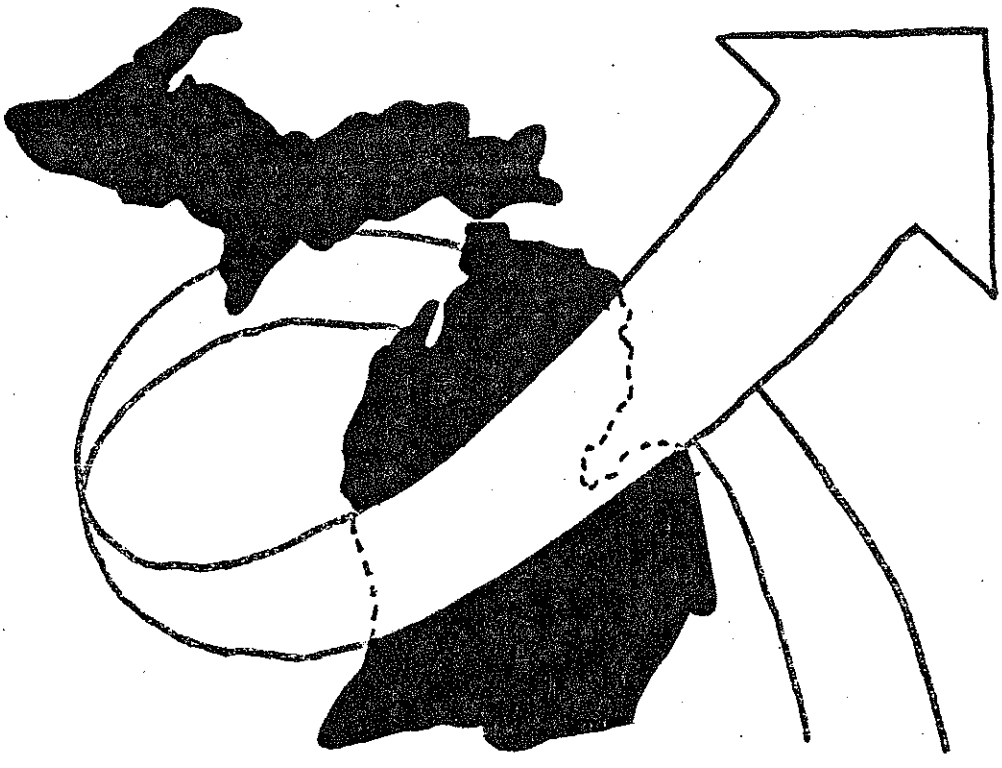
Relevant Data



RELEVANT DATA

The travel data bank of external/internal/truck-taxi trip records is now complete for the available study data. The coding has been standardized for all of the studies involved. All of the trip data is in the standard 200-character format with minor format changes in the TALUS, Port Huron, Tri-County, and Mississippi Valley Screenline Station data, which have been previously explained.

When Arthur D. Little, Inc., began analysis of their data bank, they used only the external non-through trip data. It has been decided that the internal and truck-taxi records should be used to adjust the cordon lines of the origin-destination studies to the statewide zonal system (figure 14). This method will allow more accurate analysis and comparison of the trip data to the zonal system and generated trip tables. The final trip records to be used in the analysis phase of the trip generation-trip distribution update will consist of all external non-through trip records, all internal auto driver and pick-up driver trip records, and all truck-taxi trip records.

In addition to the primary task of creating a travel survey analysis data bank the secondary goal of the reformation process was the creation of a unified trip data bank for the State of Michigan. This type of data bank

could be used for many types of research projects. To these ends, a few more modifications had to be made in the data format. Since all of the information available from the 200-character combined format O-D record is not pertinent to the structuring of a statewide trip data bank--and hence a statewide model--the usable data was transferred and the 200-character record was compressed to an 80-character record. The choice of an 80-character record was made for two reasons: the size of the trip data necessitated saving as much tape space as possible, and the 80-character record is required by a recently developed, sophisticated package of transportation planning computer programs.

Arthur D. Little, Inc. selected direction, where garaged, vehicle type, and trip purpose as the relevant data for analysis.[3] In addition to these pertinent bits of data, we decided to include station of exit or entrance for analysis purposes. There are two reasons for this decision. The first reason is to enable analysis of travel on only highways and county roads which are included in the network of the statewide model (Figure 15). The second reason is to allow seasonal adjustment on various road types.

Before the process of reformation begins, the external trip records have to be edited for the elimination of through-trips. A through-trip is a record which has neither origin nor destination within the study area. At the present time,

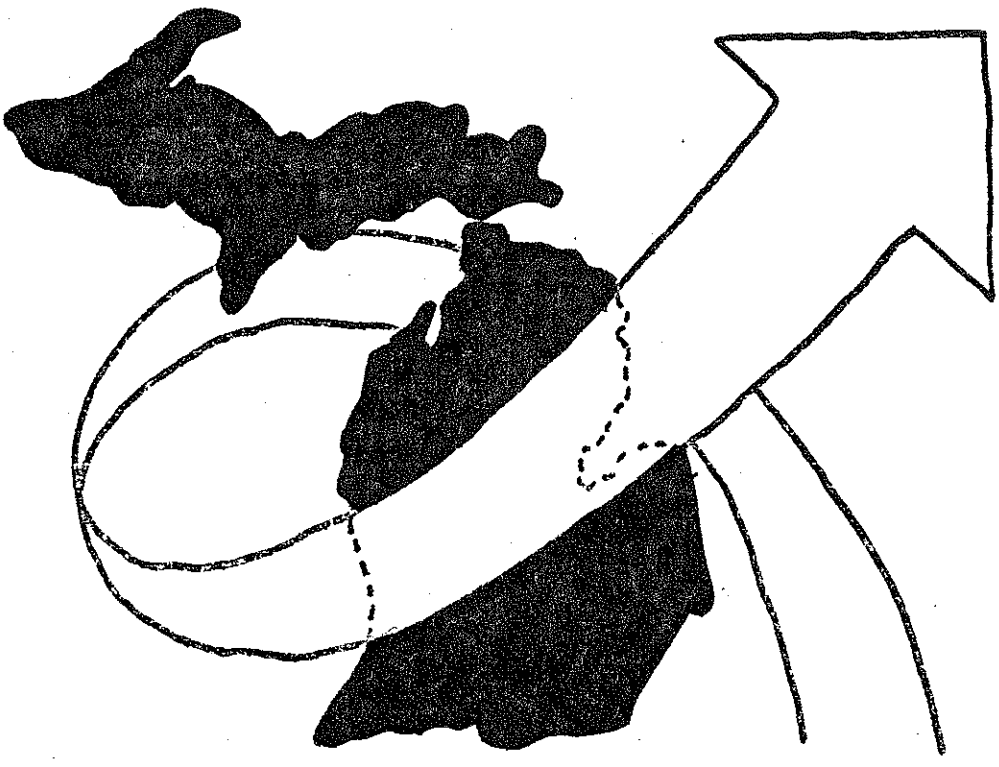
these records are not useful to the development of the trip generation-trip distribution model. The through-trips records were eliminated from the trip data bank and saved. They will be available, if necessary, for travel path analysis at some future date.

REFORMATION PROCESS



THE REFORMATION PROCESS

Now that the relevant data has been decided upon, the next step is the conversion of the original origin and destination of each trip record to the statewide zones used in the model. For each trip record, the statewide zones were recorded for the internal and external trip ends and the direction--i.e., into the origin-destination study area or out of it--was noted. Intrazonal trip records were rejected.

Trip records having identical combinations of form number, vehicle type, trip purpose, direction, where garaged, station of exit or entrance, and internal and external statewide zones (see trip vector tape description in Appendix D) were combined into a single trip record. These records will be used along with the skim trees of the statewide network to produce a set of vectors for each origin-destination study. These vectors will be used for trip-length frequency distribution in the travel characteristics analysis phase.

One other problem had to be solved. Some external trip records had external ends that specified only a county in Michigan. These county-level trip records had to be apportioned among the statewide zones making up a county. This apportionment was based only on zonal population as no additional variables were available at this time.

A computer program was specially written to convert the origin and the destination to statewide zones,

condense the relevant data, sum identical records and split county-level records. This program accomplishes the entire Reformation process. The inputs to the program are as follows for each origin-destination study area:

1. A file of external cordon trips (on tape);
2. A file of internal and truck-taxi trips (on tape);
3. A file of origin-destination study zone numbers paired with their corresponding statewide zone number (on Hollorith cards);
4. A file detailing for each county the population percentages of the statewide zones comprising that county (on Hollorith cards).

The first two inputs have already been discussed; the last three need some elaboration.

A. Zone-to-Zone Conversion Cards

The area within an origin-destination survey is divided into O-D zones. In these areas, the Statewide zones have been constructed so that each O-D zone within the cordon lies in one and only one Statewide zone (Figure 16). This deck is an equivalence table whereby the program finds the Statewide zone corresponding to the internal O-D zone of external records and for both origin and destination zones in internal or truck-taxi records. Note that there is an option which allows the program to use the Statewide zone corresponding to the central business district as the internal end of all external trips (see Appendix D). This will be discussed more fully in the section entitled "Single-Zone Reformation."

As an example of how the equivalences are obtained, refer briefly to the area base map of the Alpena study area

(Figure 16). A sample set of equivalences would be the following:

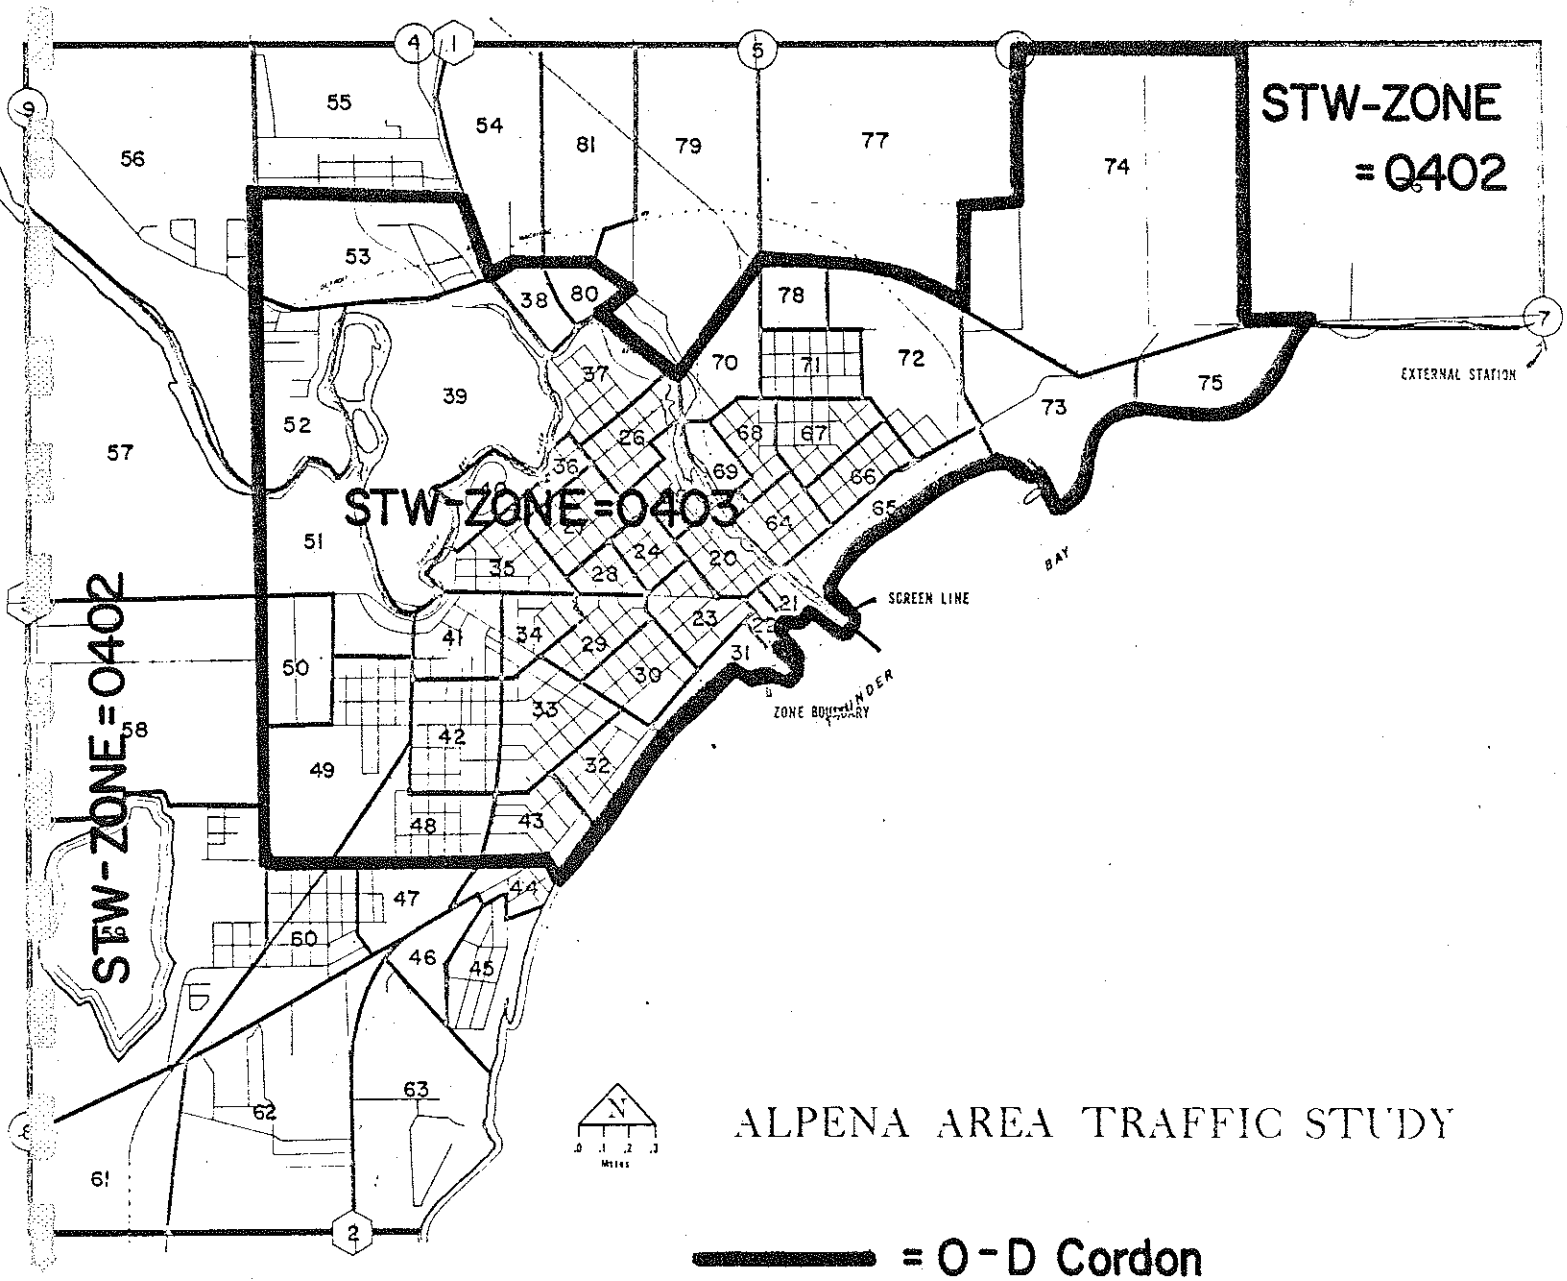
O-D ZONE NUMBER	STATEWIDE ZONE NUMBER
20	0403
21	0403
.	.
.	.
.	.
43	0403
44	0402
45	0402
46	0402
47	0402
48	0403
etc.	

B. Tract-block Conversion Cards

The external tract-block coding for all of the studies except TALUS, Port Huron, and the Mississippi Valley Screenline Stations consisted of a six-digit code. The first digit of the tract-block code was a seven, eight or nine with the exception of the Ann Arbor and Ypsilanti studies where zero, one, and two were external codes for Ann Arbor and three, four, and five were external codes for Ypsilanti. A seven signified that the external end of the trip was in the adjacent ring of Michigan counties. An eight signified that the external end of the trip was outside the adjacent counties but still in Michigan. A nine signified an out-of-state trip end. The TALUS and Port Huron external coding consisted of the same system except eight-digit codes were used. The Mississippi Valley Screenline Stations used longitude and latitude for the origin and destination coding. This was converted to statewide zones when these

FIGURE 16

AREA BASE MAP



records were reformatted as previously explained.

For the "7" codes, the remaining five digits pinpoint the county, township, and city or village. The statewide zonal equivalences can then be determined just as they are within the cordon for the zone-to-zone conversion. To get the equivalences, it was necessary to go to the master coding manual of tract-block codes for each study. This gave the city or village and township for contiguous counties; the Statewide zone equivalents were then found from a county map using a Statewide zone boundary overlay. On the next two pages are a copy of a portion of the coding supplement for the Alpena study (Figure 17) and a map of Alcona County (Figure 18). Alpena County, in this example is the county in which the study was originally taken and Alcona County is a county adjacent to the study county; therefore, all trips that had an origin or destination in Alcona County would originally have received a "7" code A sample set of tract-block to statewide zone equivalences derived from the sample page would be:

TRACT-BLOCK	STATEWIDE ZONE
701021	0101
701071	0101
701092	0102
701093	0102

The procedure for coding an origin or destination lying outside the ring of contiguous states is basically the same whether it lies in Michigan (an "8" code) or outside

Figure 17

FIGURE 18

Michigan (a "9" code). The coder must find the county of origin or destination from a map and then go to a master county-code list to obtain the six-digit O-D code. A sample of such a master list for out-of-state counties appears on the following page (Figure 19). For example, suppose a trip has its destination in Sandusky, Ohio; the coder would determine from a map that the county of destination was Sandusky County, which has county code 94172X. The corresponding statewide zone is 9441. So in the tract-block equivalence, tract-block 94172X is equivalent to statewide zone 9441. Fo an in-state non-adjacent county, the statewide equivalent is the number (1-83) of the county; followed by "00". For instance the statewide code for Alcona County is 0100; that for Wexford County, 8300. These in-state trips which ocntain "00" in the last two positions of the statewide zone will be the only trip records that enter the county-split routine in the reformation program.

Since the model is, by nature, Michigan-oriented, and in order to reduce complexity as much as possible, it was decided to use data only for trips having both origin or destination either in Michigan or in the surrounding ring of states and provinces. Any other trips are not permitted to go through Reformation; the computer program prints out records belonging to such trips, but they are not written on the reformed tape. A sample of a reformation program listing of these trips appears in figure 20a - 20b.

Figure 20b

C. County-Split Cards

For out-of-state counties, no information is lost in coding the statewide equivalents at the county level: out-of-state statewide zones are multi-county in nature. However, an in-state county contains many zones. Therefore the program needs some method of assigning a trip end with a county-level equivalence to one of the statewide zones within the county. Based on the theory that most trips are generated by a zone in direct proportion to the population of that zone, the program apportions county-level trip ends to the various Statewide zones within the county in accordance with the ratio of the 1965 population of the zone to the 1965 population of the county.[1] As an illustration, suppose that in the Alpena study it was found that 250 trips went from statewide zone 0403 (central business district of Alpena) to Clare county. Clare county contains three zones (1801, 1802, 1803). Zone 1801 has 30.9% of the county population zone 1802 contains 38.9% of the population, and zone 1803 contains the remaining 30.2%. Therefore, zone 1801 would be assigned 30.9% of the 250 trips, or 77.25 trips; zone 1802 would get 97.25 trips, and 75.50 trips would be assigned to zone 1803.

[1] Interpolated, using Preliminary Projections for Small Areas in Michigan: Working Paper No. 9, State Resource Planning Program, Michigan Dept. of Commerce, November, 1966.

Unlike the zone-to-zone conversion deck or the tract-block conversion decks, the same county split deck may be used for every run, with one caution: although no trip end in the county of the study should be coded with a county-level code "00", occasionally it does happen. If the O-D coder knows that a trip end lies within the county of the study but for some reason does not know the precise O-D zone involved, he may use a special code for "unknown"; this code is obviously county-level in nature. Therefore, it is necessary to insure that the county-split routine sends no trips to the central business district of the study area. This is accomplished by modifying the population card for the county of the study to appear as though the CBD has no population. The process is referred to as re-normalization -- i.e., making the factors add to 1 even though we treat the CBD as vacant -- and the actual formula used for each state-wide zone in the study county (except the zone containing the CBD, of course) is

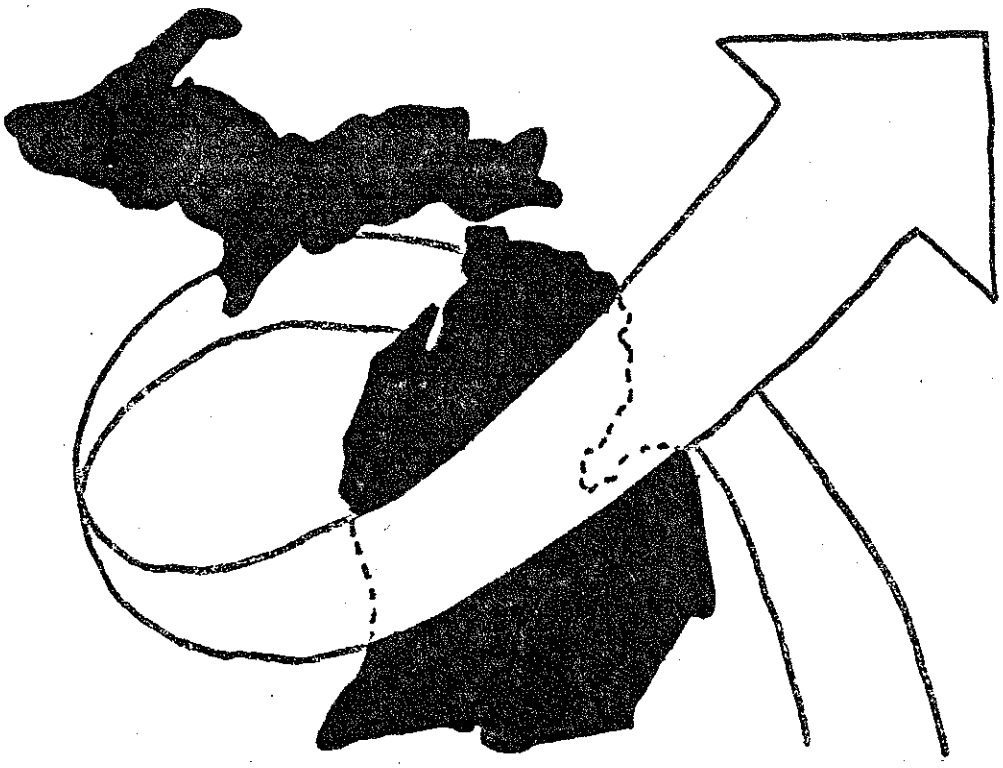
$$\text{new factor} = \frac{\text{old factor}}{1 - (\text{factor of CBD Zone})}$$

As an illustration, consider Alpena County. The CBD of the Alpena O-D Study has statewide zone number 0403. In running the Alpena reformation, then, the following changes would have to be made in the county-split deck on the card for county 04 (Alpena):

ZONE	OLD FACTOR	NEW FACTOR	
0401	.215 (21.5%)	.215/(1 - .475)	= .410
0402	.310 (31.0%)	.310/(1 - .475)	= .590
0403	.475 (47.5%)	set to	.000
		TOTAL	1.000

TYPES OF
REFORMATION

A. SINGLE-ZONE
B. MULTI-ZONE
C. MODIFIED



SINGLE ZONE, MULTI-ZONE, AND MODIFIED REFORMATIONS

The travel data analysis process used to develop a statewide traffic forecasting model was approached from two directions.

1. Treating each individual origin-destination study as a single zone in the proposed statewide zonal structure even though the actual study area may have included several statewide model zones.

2. Sub-dividing the original origin-destination study data in sub-sets that coinsided exactly with the actual statewide model zonal structure.

For example Figure 21 is a map of Saginaw County showing the study area for the Saginaw O-D. Note that there is no one-to-one match between the model zone system and the study area but with the first approach the whole region would be treated as a single model zone (7301).

In Figure 22 the Saginaw O-D study area has been subdivided in parts which coinside exactly with model zones. Only study data for model zones that are completely contained within the study area would be returned for analysis purposes.

With the first approach (Single Zone Reformation) only the external cordon trip records are necessary during the analysis phase. The second approach (Multi-Zone Reformation) requires that the analyst also use the internal and truck and taxi records in order to obtain travel data between zones 7301, 7303, 7304 and 7307 in Figure 22.

The single zone reformation was used to obtain a preliminary review of trip data file and as a check on the tract-block coding errors.

A. SINGLE-ZONE REFORMATION

To get a preliminary look at the data, each O-D study area was initially treated as a single zone; that is, the internal end of every external trip was assumed to be the statewide zone containing the CBD (referred to as the "city-zone"). In this form of the Reformation, there is no need to use internal trips records (since intra-zonal trips are not considered). Moreover, since the internal end of each trip is pre-set, a zone-to-zone conversion deck is not needed; the user must, however, supply the necessary control card in the deck set-up just as if he were including a zone-to-zone deck.

In this single-zone reformation process, many coding errors were discovered which had to be eliminated before the final multi-zone reformation could be run. Foremost among these were errors in the tract-block codes in the original O-D records. When the program reads a tract-block code, it searches the tract-block equivalence file for a matching code; is no such code is found, the record is printed out in error. Figure 23 is such an error listing. All "7" and "8" tract-block errors must be corrected in order for the reformation program to run. A new tract-block conversion card must be made and included with the original tract-block conversion cards. This new card must have the incorrect tract-block code and the statewide zone for the correct tract-block code. The analyst must determine what the tract-block code

should have been and make up new conversion cards. For example the new cards for the first few errors on Figure 15 would be:

TRACT-BLOCK	STATEWIDE ZONE
705 W	0500
705001	0501
705063	0503
705092	0503

The correct tract-block code as determined by the analyst was written on the listing for reference (Figure 23) and the error listing saved.

In order to keep a check on the number of trips included in each data file both before and after reformation, control totals (number of cordon trips) were monitored and recorded. The control totals of each file were checked for reasonableness before the file was designated as having completed reformation.

B. MULTI-ZONE REFORMATION

In multi-zone reformation, different statewide zones lying within the same O-D cordon could be distinguished. This made possible the use of internal and truck-taxi data as well as external records. The resulting file of trip vectors is then able to include data for trips between parts of the study area.

Here again, coding errors caused trouble. Sometimes the coder assigned an O-D zone which did not appear in the original coding manual; this necessitated the creation of

Figure 23

a new equivalence card using the new O-D zone and the appropriate statewide zone. Sometimes an equivalence card was inadvertently omitted. In either case, the program prints out "INVALID OD-ZONE ON ZONE-TO-ZONE CARDS))))))))))0000000000."

On the next three pages are examples of three possible multi-zone reformation printer outputs. Figure 24 is an example, of a restart in phase 2; this would occur, for example, after the error described above. Figure 25 is an example of a Fatal error message in phase 3. The remedy is to resort the county-split cards and restart at phase 3 (see Appendix D). Figure 26 is an example of a completed run. The data for Cadillac would then go into the trip data bank.

Again, control totals were monitored for each study area and their reasonableness checked. On no occasion did investigation of the control totals indicate a program malfunction.

C. MODIFIED REFORMATION

In a previous section of this report dealing with the reformating of trip tape files and ths standardization of codes not all of the travel data bank discrepancies could be resolved. Because of this, the "Reformation" computer program had been written in one standard version plus five modifications of the standard. These programs were labeled Q01099 A, B, C, D, E. The trip data from the following cities was acceptable to the standard reformation program Q01099:

```
* 001099 * DD STATEWIDE * REFORMATION      :001099 RESTART:PHASE 2      ADRIAN 20 1967                21528

Reformation program Q01099A was defined to handle the tract-block and zonal coding problems for TALUS. As previously explained TALUS's external tract-block codes were eight digits long and could not be reformatted to the standard 200-character records. The same type of problem was involved with TALUS's internal zones: The zone numbers were too large for the area defined in the standard 200-character format. Therefore the external tract-block and internal zone for each TALUS record were assigned to areas of the 200-character record which were not usually used. This change required a modification of the standard reformation program to accept the TALUS non-standard 200-character format. The standard reformation program accepted origin-destination internal zones numbered from 1-420. This also had to be modified since TALUS had 1446 internal zones.

Reformation program Q01099B was very similar to Q01099A. Port Huron had the same tract-block coding problem as TALUS.

With the Port Huron records, only the eight-digit tract-block code was moved to a non-standard area on the 200-character record format. The standard reformation program was modified to accept the Port Huron non-standard record.

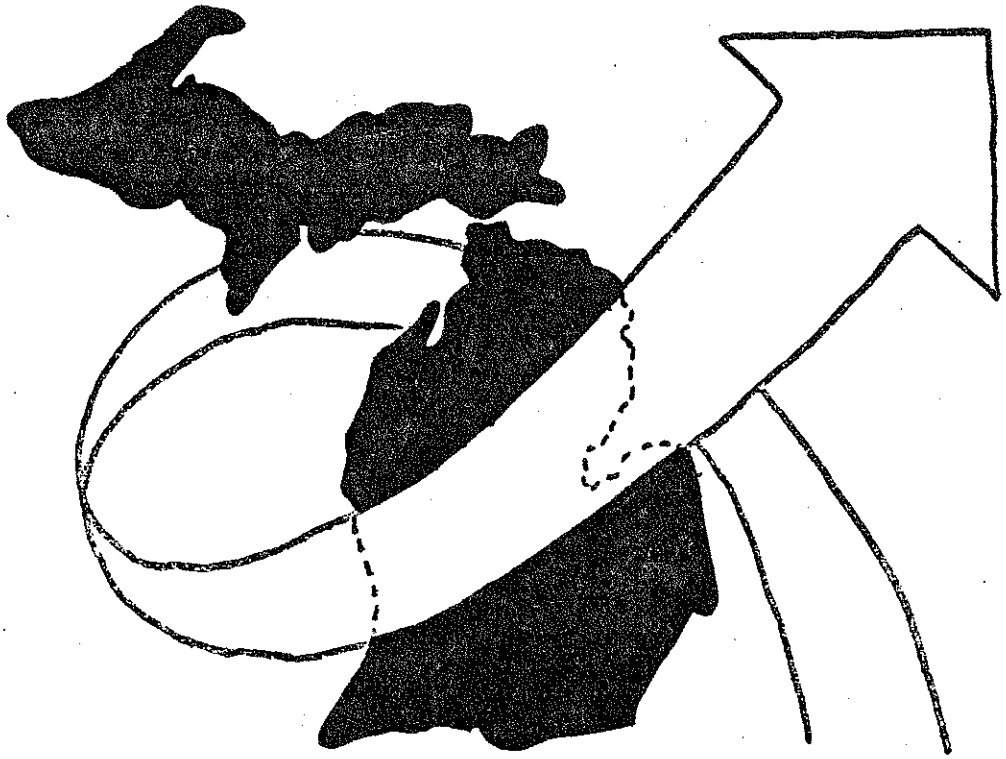
Reformation program Q01099C and Q01099D were the same type of modification of the standard reformation program. The original program required a "7", "8", or "9" in the first position of the tract-block code for the external end of a trip. As previously explained, Ann Arbor and Ypsilanti had other codes denoting an external end. Q01099C was a modification for Ann Arbor which accepted "0", "1", "2", "7", "8", and "9" as external tract-block codes. Q01099D was the modification for Ypsilanti which accepted "3", "4", "5", "7", "8", and "9" as external tract-block codes.

Reformation program Q01099E was a modification of the original reformation program which was required for the Mississippi Valley Screen Stations data. When the data for the Mississippi Valley Screen Station was standardized and reformatted to the 200-character record format, the latitude and longitude were replaced by a six-digit tract-block code for the origin and the destination in the standard places of the 200-character format and a statewide zone for the origin and the destination in the standard places of the 200-character format and a statewide zone for the origin and the destination was placed in a non-standard area of the 200-character format (see figure 12a - 12b When these records were used in the reformation program, the origin and the

destination did not have to be converted to statewide zones, since this information was already available on the record. Only those records which had a specified statewide zone (the zone of the study area) as either the origin or the destination were allowed to go through the reformation process. The reformation process for the Mississippi Valley Screen Station data was considerably shorter than the reformation process. The reformation process for the Mississippi Valley Screen Station data was considerably shorter than the reformation process for the other data. The modification Q01099E only had to compress the relevant data and sum identical records.

This completes the reformation process for all of the study areas' data. We now have a complete trip data bank. All of the data has been standardized and is in a workable form.

Conclusion



CONCLUSION

With a complete trip data bank, a large portion of the preliminary work for Travel Model Development has been accomplished. The next phase of preliminary work to be completed is the Social-Economic Data Bank Development which will be discussed in Volume V - Part B. With both data banks complete, thorough analysis of travel characteristics can be completed and a preliminary travel model or models selected. This will be discussed in Volume V - Part C. Once a preliminary model(s) has been selected, the final phases of the project will be underway -- the calibration of the trip generation and trip distribution model. The calibration process will be covered in two separate reports -- Volume V - Part D and Part E.

EXTERNAL CODING

CODING INSTRUCTIONS AND MASTER CODES

Metropolitan Area Traffic Study

SECTION III

EXTERNAL INTERVIEW - FORM 1599 O-D & CARD NO. 3

General

The coding spaces across the top of this form are for coding that information which applies to all of the trips recorded on the form. This includes City, Form Number, Hour Period Ending, Direction of Travel, Station Number, and Day of Travel. (as much coding as possible will be done by the interviewers)

The body of the form contains numbered inquiries and coding spaces for six individual trips.

The coding spaces on the form are numbered to correspond to the proper columns on the tabulating card. These numbers appear beneath the coding spaces and across the bottom of the form.

Following are the complete coding instructions for the External Interview Form, identified by column numbers and field headings as they appear on the tabulating card. The complete codes to be used are either included in the proper paragraphs of this Section, or listed in the Local Geographic Code, Section VII.

Reviewing

Before any coding of the External Interview Form is done, the following operation must be performed:

a. Remove the forms from the Hourly Summary Envelope and check each form against the envelope. The City, Hour Period, the External Station Number, must correspond to those listed on the envelope, and the Day of week listed on the envelope must correspond to the day as entered on the form.

b. Call to the attention of the supervisor any errors or omissions, and have them corrected by him.

c. Number in consecutive order the trips recorded for the hour period, beginning with one. (Inbound starting with one and Outbound starting with one) The serial number is subsequently coded as described under Inquiry 1, coding Cols. 10-12.

d. List on the left hand side on the front of envelope the actual number of trips recorded, (interviews) for that hour. After the coding is completed list on the envelope the number of interviews thrown out. The difference would be the number coded for that hour.

Cols. 1-2; City Number

The City code is a two place code and is printed on the form in code columns 1 and 2.

Col. 3; Form Number

The Form number (or code) "4" is printed on the form in code column 3.

Cols. 4-5; Interview Period

This is the hour period recorded on the first line of the form; the hour of ending of this period is coded in the spaces provided on this form, according to the following complete code.

This code is based on the twenty-four hour system of timekeeping, which means that the designation A.M. and P.M. are dropped and the hours are numbered consecutively from one to twenty-four; thus 1:00 P.M. becomes 13:00, etc.

HOUR PERIOD			CODE (COLS. 4-5)
12 PM (Midnight)	to	1 AM	01
1 AM	"	2 "	02
2 "	"	3 "	03
3 "	"	4 "	04
4 "	"	5 "	05
5 "	"	6 "	06
6 "	"	7 "	07
7 "	"	8 "	08
8 "	"	9 "	09
9 "	"	10 "	10
10 "	"	11 "	11
11"	"	12 Noon	12
12"	"	1 PM	13
1 PM	"	2 "	14
2 "	"	3 "	15
3 "	"	4 "	16
4 "	"	5 "	17
5 "	"	6 "	18
6 "	"	7 "	19
7 "	"	8 "	20
8 "	"	9 "	21
9 "	"	10 "	22
10 "	"	11 "	23
11"	"	12 Midnight	24

For Classification code 12 Midnight to 1 AM 00 - 01

Col. 6: Direction of Travel

The direction of travel "INBOUND" - Code 1 and "OUTBOUND" - Code 2 is printed on the form.

Cols. 7-8: Station Number

The station number is entered in this space by the interviewer. Check the station number and make sure that this number corresponds to the number on the envelope.

Enter in the coding columns 7 and 8 the proper station number and prefix a zero in front of all numbers from 1 to 9 inclusive.

A complete code showing number and location of all external interview stations for the current study will be found in the Local Geographic Code, Section VII.

Col. 9: Day of Travel

The day of travel will be determined from the date of interview as recorded on the first line of the form, and coded as follows:

Day of Week	Code (Col. 9)
Sunday	1
Monday	2
Tuesday	3
Wednesday	4
Thursday	5
Friday	6
Saturday	7

Cols. 10-11-12: Interview Number

The interviews for each hour period (by directions) will be consecutively numbered; prefix two zeros to numbers 1 to 9 inclusive, and prefix one zero to number 10 to 99 inclusive.

Complete Code as follows:

Interview Number	Code (Cols. 10-11-12)
1	001
2	002
3	003
etc.	
10	010
11	011
12	012
etc.	
100	100
101	101
102	102
etc.	

Col. 13; State of Registration

Enter in the coding space the number circled by the interviewer under Inquiry 2.

State of Registration	Code Col. 13
Michigan	1
*Other	2
Not Stated	X

*Includes all other states, District of Columbia, U. S. Government, Canada, Mexico, etc.

Col. 14; Vehicle Type

Enter in the coding space the number listed by the interviewer under Inquiry 3. The code is as follows:

Vehicle Types	Code Col. 14
Passenger Car	1
Single Unit-Single Rear Tire	2
Single Unit-Dual Rear Tire	3
Single Unit-3 or 4 Axle	4
TT-ST Combinations	5
TK-TR Combinations	6
TT-ST-TR Combinations	7
Bus (not C.C.)	8
Taxi	9

Cols. 15-16; Number in Vehicle

This information is coded by the interviewer under inquiry 4; he will prefix a zero to numbers from 1 to 9 inclusive. Code "XX" if no number is given.

Number in Vehicle	Code Cols. 15-16
1	01
2	02
3	03
etc.	
10	10
11	11
12	12
etc.	

Cols. 17-18-19-20-21-22; Trip Origin

Cols. 25-26-27-28-29-30; Trip Destination

For coding instructions and explanation of coding procedure see Section II, item numbered (1) and (2); for complete codes see Local Geographic Code, Section VII in this manual.

Cols. 23-24; Land Use

The Land Use Code for through trips (trips starting and ending outside the area) will always be "YY". The Land Use Code applies to inbound trips with destination within the area or outbound trips with origins within the area. For complete codes see "Land Use" Section V, revised January, 1966.

Col. 31; Where the Vehicle is Garaged

Inquiry 8 is where the vehicle is normally kept or garaged. If the interviewer circles the 5 it is garaged at the origin, and if 7 is circled, it is garaged at the destination. "Other" means that the vehicle is garaged at neither the origin nor the destination and the interviewer will note the address under "Other" in the space allowed in inquiry 8. Complete code follows:

Vehicle Garaged At	Code Col. 31
Within the Cordon	1
Outside the Cordon at Origin	2
Outside the Cordon at Destination	3
Outside the Cordon at Neither the Origin nor Destination	4

Col. 32; Purpose of Trip

This information is coded by the interviewer under inquiry 9.

Complete code is as follows:

Purpose	Code Col. 32
Work	1
Personal Business	2
Shopping	3
Vacation	4
Other Social or Recreation	5
All Others	6

Col. 33; Screen

See complete code and instructions in Section III, item number (4). The code for "Non-driver trips" will not apply to the External Interview form and therefore Col. 33 can never be coded "0".

Cols. 34-35; Route of Exit or Entrance

Under inquiry 11, "Route of Exit or Entrance" will be listed in one of the following ways:

a. For through traffic interviewed when inbound, the intended route of exit, by route number or road name.

b. For through traffic interviewed when outbound, the actual route of entrance by route number or road name.

c. For traffic with one terminus within the area the word "None".

Coding will be done by entering in the proper spaces the number of the external station which is located on the designated route, for conditions "a" and "b", or the symbols "XX" for condition "c". Where the route of exit or entrance is not stated by the interviewer, the coding supervisor will determine a logical route by referring to the Origin, Destination and Station. The Route so determined will be coded.

The external station number will be determined by referring to the Area Base Map and Supplement to this manual.

For condition "a", the route of exit taken in conjunction with the destination of the trip, will indicate the station of exit.

For condition "b", the route of entrance taken in conjunction with the origin of the trip, will indicate the station of entrance.

The station of exit or entrance can never be the same as the station of interview on the second line of the interview form.

The complete code for external stations will be found in the Local Geographic Code, Section VII.

Station of Exit or Entrance	Code (Cols. 34-35)
1	01
2	02
etc.	
10	10
11	11
etc.	
None	XX

If code columns 34-35 are coded "XX", columns 36 thru 43 will be left blank.

Col. 36; Stops in Area

Enter in the coding space the number the number circled by the interviewer under this inquiry; if no number is circled code "X".

If the numeral "1" is circled, check the "Intermediate Stop" inquiry to make sure that an intermediate stop has been recorded. An intermediate stop should be listed only if the numeral "1" is circled; in all cases where this rule is violated consult the coding supervisor.

When a numeral other than "1" is circled under this inquiry, the remaining

inquiries on the form should be blank and no coding will be necessary.

Stops in Area	Code Col. 36
Yes	1
No	2
Not Stated	X

Intermediate Stop

The inquiries for purpose and location of intermediate stop should contain entries only when the numeral "1" under "Stops in Area" is circled.

Only intermediate stops within the Study Area should be listed. If stops are listed which lie outside the Study Area, refer the matter to the coding supervisor. No intermediate stops outside the Study Area will be coded.

Col. 37; Intermediate Stop Purpose

Enter in the coding space the number listed by the interviewer under Inquiry 13.

Purpose of Stop	Code Col. 37
Course of Work	1
Transact Business	2
Social-Recreation	3
Eating	4
Gas-Oil-Service	5
Serve Passenger	6
Secure Lodging	7
Shopping	8
Unknown or not stated	X

Cols. 38-39-40-41-42-43; Intermediate Stop Location

The location of intermediate stop as recorded on the form should always be within the limits of the Study Area. The location will be coded according to the instructions given in Section II, item numbered (1) and (2). The complete code for locations will be found on the Area Base Map and in the Local Geographic Code, Section VII in this manual.

INTERNAL CODING

CODING INSTRUCTIONS AND MASTER CODES

Metropolitan Area Traffic Study

SECTION II

INTERNAL TRIP REPORT - FORM 1599 - O-D 3 & CARD NO. 2

General

Across the top of the form are numbered coding spaces for information which applies to all trips recorded on the sheet. This includes City Number, Form Number, Tract Number, Block Number and Sample Number.

The body of the form contains numbered inquiries for five individual trips. As many sheets are used as are needed to record all trips and the sheets are numbered consecutively in the upper right corner.

The coding spaces on the form are numbered to correspond to the proper columns on the tabulating card. These numbers appear beneath the coding spaces and across the bottom of the form.

Following are the complete coding instructions identified by column numbers and field headings as they appear on the tabulating card. Each paragraph or item of the instructions is numbered for reference.

The complete codes are either included in the proper paragraphs of this Section, or listed in the local geographic code, Section VII, as noted.

(1) Cols. 1-2: City Number

The City Code is a two place code and is printed on the form in code column 1 and 2.

Col. 3: Form number

The Form Number (or code) "3" is printed on the form in code column 3.

Cols. 4-5-6-7-8-9: Residence Tract and Block

This will be transcribed from the Interview Address Summary. See Section I, item 4, for explanation and the local geographic code, Section VII for the complete code.

Cols. 10-11: Sample Number

This will be transcribed from the Interview Address Summary. See Section I, item 5 for code and explanation.

Cols. 12-13: Person Number

The person number has been transcribed by the interviewer from the Interview Address Summary. Code the number in the coding spaces provided, prefixing a zero to all numbers from 1 to 9 inclusive. See Section I, item 2 and 18 for the nineth person.

Person Number	Code Cols. 12-13		One Summary Sheet (form OD-2) code box 4 blank
1	01		one sheet
2	02		" "
3	03		" "
		etc.	Two Summary Sheets (form OD-2) with Code Col. 4 coded "1"
9	09		two sheets
10	10		" "
		etc.	Three Summary Sheets (form OD-2) with Code Col. 4 coded "2"
17	17		Three sheets
18	18		" "

Cols. 14-15; Person's Trip Number

The trips for each person must be numbered individually, beginning with number 1 for each person. Code the recorded trip number in the proper spaces and prefix a zero to all numbers from 1 to 9 inclusive.

Person's Trip No.	Code Cols. 14-15
1	01
2	02
3	03
etc.	
10	10
11	11
12	12
etc.	

Col. 16; Mode of Travel

Enter in the coding space the number listed by the interviewer under Inquiry 3. This may be coded by the interviewer in the field. The complete code is as follows:

Mode of Travel	Code Col. 16
Walk to Work	0
Auto Driver	1
Auto Passenger	2
Bus Passenger	3
Taxi Passenger	4
Truck Passenger	5
School Bus Passenger	6

Cols. 17-18-19-20-21-22; Trip Origin

Cols. 25-26-27-28-29-30; Trip Destination

The coding of places of origin and destination involves the use of five codes, as follows:

1. Tract and Block code for the Study Area.
2. Township, City and Village Code for the surrounding counties.
3. County Code for Michigan
4. County Code for all other States.
5. Country Code

(2) Coding Procedure for Origins and Destinations

1. The Study Area

For coding locations within the Study Area, the Area Base Map, the local telephone and city directories, and the complete Tract and Block Code will be needed for reference.

If the origin or destination is listed as "Home" ("H" circled by the interviewer) code cols. 17 thru 22 or code cols. 25 thru 30 will be left blank.

If the location is listed by house number and street, or by the names of intersecting streets, find the indicated location on the Area Base Map and enter in the coding spaces the Tract and Block numbers for that location.

When the location is indicated by the name of a bank, store, or other large building or well known place, it will be necessary to refer to the directory for the street address, and then to the map for Tract and Block numbers.

2. The County

For coding locations within the county or counties surrounding the Study Area, the County Base Map and the complete Township, City and Village Code will be needed for reference.

When the location is indicated by city or village, enter the proper code numbers directly from the Township, City and Village Code. When the location is indicated by the name of a small inhabited place not listed in the code, locate the place on the County Base Map and enter the code for the township in which it is located.

When location is given by road name or route number and mileage from a city or village, fix the location by the same method and enter the code for the township in which it lies.

3. The State of Michigan

Required references will be an adequate map of the State and the complete County Code.

From the map, find the county in which the given location lies, and enter the code for that county from the complete County Code in the Supplement to this manual.

4 & 5 Outside of the State

Required references will be adequate maps of all the States.

Locations outside the State of Michigan will be given by city and state, or city and country. All locations will be coded by state and county. From the map find the county in which location lies and enter the code for that state and county.

Cols. 23-24; Land Use at the Origin

Cols. 31-32; Land Use at the Destination

If the origin or destination is listed as "Home" ("H" is circled by the interviewer) code cols. 23-24 or code cols. 31-32 will be left blank.

Land Use applies to origins and destinations within the study area, origins and destinations outside the study area will be coded "YY". For complete codes see "Land Use Section" revised January 1966.

(3) Cols. 33-34-35-36; Time of Leaving

Cols. 37-38-39-40; Time of Arrival

All times as listed by the interviewer must be converted to the twenty-four consecutively numbered hours, instead of twelve-hour A.M. period and a twelve-hour P.M. period.

A.M. times and 12 Noon - 1 P.M. are coded directly except that a zero is prefixed where necessary to complete a four column code.

P.M. times beginning with 1 P.M. are converted for coding by adding 1200 to the time listed.

The first minute after midnight which is the first minute of the new day is coded 0001, and midnight which is the last minute of the day, is coded 2400. The complete code follows:

Time	Code (Cols. 33-36; 37-40)
12 Mid. to 12:59 AM	2400 to 0059
1:00 AM to 1:59 AM	0100 to 0159
2:00 AM to 2:59 AM	0200 to 0259
3:00 AM to 3:59 AM	0300 to 0359
4:00 AM to 4:59 AM	0400 to 0459
5:00 AM to 5:59 AM	0500 to 0559
6:00 AM to 6:59 AM	0600 to 0659
7:00 AM to 7:59 AM	0700 to 0759
8:00 AM to 8:59 AM	0800 to 0859
9:00 AM to 9:59 AM	0900 to 0959
10:00 AM to 10:59 AM	1000 to 1059
11:00 AM to 11:59 AM	1100 to 1159
12 Noon to 12:59 PM	1200 to 1259
1:00 PM to 1:59 PM	1300 to 1359
2:00 PM to 2:59 PM	1400 to 1459
3:00 PM to 3:59 PM	1500 to 1559
4:00 PM to 4:59 PM	1600 to 1659
5:00 PM to 5:59 PM	1700 to 1759
6:00 PM to 6:59 PM	1800 to 1859
7:00 PM to 7:59 PM	1900 to 1959
8:00 PM to 8:59 PM	2000 to 2059
9:00 PM to 9:59 PM	2100 to 2159
10:00 PM to 10:59 PM	2200 to 2259
11:00 PM to 11:59 PM	2300 to 2359

Cols. 41-42: Purpose of Trip - From-To

Enter in coding spaces 41 and 42 the numbers listed by the interviewer under Inquiry 9. (This may be coded by the interviewers). The exact purpose of the trip is indicated by the two numbers in terms of trip origin (Col. 41) and trip destination (Col. 42). There are ninety-nine possible trip combinations that may appear in this two-column code. The hundredth combination, "00" or Home to Home is impossible for the reason that such a round trip must be broken up and recorded as two trips.

All of the possible trip combinations may be decided by referring to the following key:

From Code (Col. 41)	Purpose	To Code (Col. 42)
1	Work	1
2	Transact Business	2
3	Shopping	3
4	School	4
5	Social, Recreation	5
6	Change Mode of Travel	6
7	Eat Meal	7
8	Medical - Dental	8
9	Serve Passenger	9
0	Home	0
X	Unknown	X

Examples:

Code	Translation
40	From School to Home
55	From Social to Social
71	From Eating Meal to Work
03	From Home to Shopping

Inquiries 10-11-12: For Drivers Only

All passenger trips and "Walk to Work" trips, will be coded "0" by the interviewer in the coding spaces for Cols. 43, 44 and 45.

In cases where trip reports are incorrect in this respect, submit them to the supervisor for correction.

When Inquiry 3, Col. 16, is coded "1", Cols., 43, 44 and 45 cannot be coded "0"'s.

Col. 43, Person in Car

For passenger trips and "Walk to Work" trips code "0" in the coding space; for driver trips enter in the coding space the number listed, if less than nine; if the number is nine or more, code "9". The complete code is as follows:

No. of Persons in Car	Code (Col. 43)
1	1
2	2
3	3
4	4
5	5
6	6
7	7
8	8
9 or more	9
Non-driver Trips	0
Unknown	X

Col. 44; Parking

Enter in the coding space the number listed by the interviewer under Inquiry 11. For passenger trips and "Walk to Work", code "0". The code for kind of parking is as follows:

Kind of Parking	Code (Col. 44)
Street Free	1
Street Metered	2
Lot Free	3
Lot Paid	4
Lot Municipal	5
Parking Garage	6
Service or Repair	7
Residence Property	8
Not Parked	9
Cruising	Y
Unknown	X
Non-Driver Trips	0

(4) Col. 45: Screen

No entry is made by the interviewer under Inquiry 12. The purpose of the inquiry is as follows:

Certain tests must be applied to the interview data to determine if representative results are being obtained from the study.

One of these tests is made by means of a screen line, which is a line established through the study area in such a way that all of the actual traffic passing from one part of the area to the other crosses the screen line and may readily be counted and classified.

If it can be determined also how many trips of the designated sample have passed across the screen, this figure can be expanded by the proper factor and the accuracy of the sampling method can be tested by comparing this total with the actual counts obtained in the manner above described.

The operation of measuring the number of trips across the screen line is performed as follows:

The established screen line is shown upon the Area Base Map. The origin and destination of each "Auto Driver" trip is then located on the map by the coders, and if origin and destination lie on opposite sides of the screen line then that trip is coded as passing the screen.

All passenger trips are coded "0" in the coding space for Col. 45; driver trips passing the screen are coded "1" and driver trips not passing the screen are coded "X", according to the following code:

Screen	Code (Col. 45)
Passing Screen	1
Not Passing Screen	X
Non-driver Trips	0

Col. 46: Car Pool

Code "1" for car pool trips (driver or auto passenger trips only).

Code "2" for non car pool trips (also "walk to work", bus, taxi and truck passenger trips).

Enter in coding box number 46 the number listed by the interviewer under Inquiry 13. If unknown code "X".

TRUCK-TAXI CODING

CODING INSTRUCTIONS AND MASTER CODES

Metropolitan Area Traffic Study

SECTION IV

Trip Report For Trucks & Taxis - Form 1599 O-D 8 & Card No. 4

General:

The Trip Report for Trucks and Taxis presents in tabular form the information as recorded by the interviewers or as logged by the vehicle operators. This form lists in order all travel performed by the sample vehicle for the specified day.

This information must first be reduced to usable form and then transcribed to an intermediate coding sheet for use by the key-punch operator.

The intermediate coding sheet Form O-D 8, illustrated herewith, contains coding boxes arranged under the same field headings and column numbers as appear on the tabulating card.

Pre-Coding Operations on Form O-D 7

Before the information on the Trip Report form can be transcribed to the coding sheet, certain operations must be performed to make the data usable as follows:

1. Serial numbering(interview number) of Truck Reports and Taxi Reports separately
2. Assignment of trips and trip numbers
3. Checking trips across the screen line.

Interview Number

Arrange the Taxi Trip Reports by ownership; that is, group together the taxis operated by each company. Number the Trip Reports consecutively, beginning with one.

Arrange the Truck Trip Reports by ownership; that is group together all trucks owned and operated by one firm or one individual. Number the Trip Reports consecutively beginning with one.

Assigning Trip Terminals and Trip Numbers

Delivery trucks for dairies, laundries, department stores, wholesale dealers and many other businesses and occupations travel more or less regular and roundabout routes, making stops in nearly every block or possibly several stops in certain blocks.

It is obviously not practical to consider each of these stops as the ending of one trip and the beginning of another; on the other hand, round trips do not lend themselves to study and analysis. Therefore it becomes necessary to break down these roundabout trips into a series of individual trips of reasonable length and directness.

The following general rules for such adjustments apply also to taxi trips, which usually consist of roundabout circuits with many stops.

a. All truck and taxi trips shall be traced out from point to point on the Area Base Map. By this means it will be possible to determine which points represent logical trip terminals.

b. Choose these points logically and consistently; each individual trip as selected should be reasonably direct. A definite change in direction usually should be chosen as the ending of one trip and the beginning of another.

c. For comparatively short round trips, choose the point farthest from the starting point as the destination of one trip and the origin of another.

d. In general try to maintain a length of trip of approximately one-half mile, if other conditions permit.

e. On Form OD-7, draw heavy red lines across the sheet to indicate the terminals chosen for each trip.

f. Number the trips consecutively down the right margin of Form OD-7 and on the last sheet for the vehicle in question enter the total trips in the space provided at the lower right corner.

Screen Line

Locate on the Area Base Map the origin and destination of each trip as finally determined. If origin and destination lie on opposite sides of the screen line indicated on the map, then the trip crossed the screen and this fact should be indicated by writing "Yes" in the column on Form OD-7 headed "For Office Use".

If origin and destination of the trip lie on the same side of the screen line, the trip did not cross the screen, and this is indicated by writing "No" in the same column.

Coding from Form OD-7 to Form OD-8

The information listed in the upper left portion of Form OD-7 is transferred by coding to the upper part of Form OD-8.

The information in the upper right portion of Form OD-7 is for the use of the interviewer only, and is not coded.

The trip information in the body of Form OD-7 is transferred by coding to the body of Form OD-8, with exception of "Total Trips", which is coded into the upper line of Form OD-8.

A new code sheet is started for each vehicle, and all the trips for that vehicle are coded in order on succeeding lines in the body of the form. When the number of trips for one vehicle exceeds the number of lines on the sheets, a second sheet is used, or as many as are necessary to record all the trips. The heading (Cols. 1 through 25) is duplicated on each sheet, and the sheets are numbered in the upper right corner. If three sheets are used for one vehicle they are numbered "Sheet 1 of 3 sheets; Sheet 2 of 3 sheets; and Sheet 3 of 3 sheets".

Each vehicle must be represented by a code sheet, whether or not any trips were made; in the case of no trips, or trips unknown only the heading and the Trip Number (Cols. 1 through 28) are coded as explained later.

Coding shall be done according to the following instructions and complete codes.

Cols. 1-2; City Number

The City Code is a two-place code and has been printed on the form.

EXAMPLES:

City Number	Code Cols. 1-2
Grand Rapids	14
Saginaw	15
Detroit	16
Flint	17
Traverse City	18
Kalamazoo	19
Adrian	20
Jackson	21
Iron Mountain	22
etc.	

Col. 3; Form Number

The Form Number (or code) "8" is printed on the form in code column 3.

Col. 4; Miles Driven per Year

From Truck and Taxi Interview Form OD-7 "Miles Driven per Year" (actual miles driven) code in code column 4 (Form OD-8) the miles driven per year as follows:

Miles Driven per Year	Code Col. 4
Under 5,000 Miles	1
5,001 to 7,500 Miles	2
7,501 to 10,000 Miles	3
10,001 to 15,000 Miles	4
15,001 to 20,000 Miles	5
20,001 to 30,000 Miles	6
30,001 to 50,000 Miles	7
50,001 to 75,000 Miles	8
75,001 to 100,000 Miles	9
Over 100,000 Miles	0
Unknown or not Reported	X

Cols. 5-6-7-8; Interview Number

The interview number is coded directly from Form OD-7. For trucks, prefix sufficient zeros to fill all coding spaces; for taxis, code "X": in column 5 and code "0" in the intervening spaces.

Interview Number	Code Cols. 5-6-7-8
"Trucks"	
1	0001
2	0002
3	0003
etc.	
10	0010
11	0011
12	0012
etc.	
"Taxis"	
1	X001
2	X002
3	X003
etc.	
10	X010
11	X011
12	X012
etc.	

Cols. 9-10-11-12-13-14; Owned or Garaged At

All vehicles normally will be garaged within the Study Area, with the possible exception of interstate or intrastate highway freight vehicles, which may have permanent termini within the Study Area although owned or garaged elsewhere.

Coding garage addresses will be done as describe in Section 11, items numbered (2). The complete codes for location will be found in the Local Geographic Code, Section VII.

Cols. 15-16-17; Industry and Business

Both industry and business shall be coded. Where the industry only or the business only is recorded on the Trip Report, it will be a simple matter in most cases to determine the nature of the of the other classification from a study of the attached code or by checking with the recored owner of the vehicle.

The industry classification of the following code is identical with the industry classification of the Industry and Occupation Code contained in Section 1, paragraphs 19 and 20. It is a broad general classification

designed to cover all phases of industrial activity within a limited number of categories.

The business classification gives a more detailed breakdown of the various activities embraced within the industry classifications. Due to the general nature of all such codes, certain specific activities may not be represented by code numbers. In this case the activity in question shall be coded under the most nearly comparable classification. It is important that this be done in a consistent manner, always assigning the same activity, where it recurs, to the same classification.

This is a three-column code, with the first column representing industry and the other two columns representing business. The codes for the two classifications, industry and business can be used only in the groupings shown in the code. Industry code "0" can be used only with Industry code. Business codes "00" and "01" through "04"; "1" can be used only with Business codes "05" through "09", etc.

Industry and Business Code

Code (Col. 15)	Industry	Code (Cols. 16-17)	Business
0	Agriculture, Forestry Fishing	00	Farming and Truck Gardening
		01	Commercial Fishing
		02	Fruit Growing
		03	Tree Nurseries
		04	Not Otherwise Classified
1	Mining and Mineral Extraction	05	Stone, Sand and Gravel
		06	Salt and Brine
		07	Petroleum, Natural Gas
		08	Metallic Ores
		09	Not Otherwise Classified

Code (Col. 15)	Industry	Code (Cols. 16-17)	Business
2	Construction & Related Maintenance	10	General Contractors-Bldg., Highway, etc.
		11	Carpentering
		12	Concreting, Excavating and Grading
		13	Electrical
		14	Heating, Plumbing, Ventilation & Well Drilling
		15	Plastering, Lathing, and Insulation
		16	Painting, Paper Hanging & Decorating
		17	Roofing, Eavestroughing & Sheet Metal
		18	Flooring, Masonry, Tile, Weather Stripping, Glass & Glazing
		19	Not Otherwise Classified
3	Manufacturing & Processing	20	Food and Kindred Products - Candy Popcorn, Soft Drinks, etc.
		21	Beer, Wine, Liquor, Malt, etc.
		22	Textile Mill Products and Other Fiber Manufactures - Wadding, Rugs, Twine, Felt Goods, Hosiery, Knitted Underwear and Gloves
		23	Apparel and Finished Materials Made from Fabrics and Similar Materials
		24	Furniture and Finished Lumber Products; Mattresses, Bedsprings, Boxes, Posts, Barrels
		25	Paper, Pulp and Allied Products
		26	Printing, Publishing and Allied Manufactures - Bookbinding, Engraving
		27	Chemicals and Allied Products-Tallow, Compressed Gas, Cosmetics, Soap, Glycerin, Paint, etc.
		28	Petroleum and Coal Products; Fuel Oil
		29	Leather and Leather Products
		30	Stone, Clay and Glass Products
		31	Metals and Metal Products-except Machinery; includes stoves, Furnaces, Castings, etc.
		32	Electrical Machinery and Products
		33	Machinery (except Electrical); Refrigerating and Air-Conditioning Equipment, Machine Tools, etc.

Code (Col. 15)	Industry	Code (Cols. 16-17)	Business
3	Manufacturing and Processing	34	Automobiles and Transportation Equipment, Motorcycles, Railroad and Street Car Equipment
		35	Salt, Chlorides, Bromides
		39	Not Otherwise Classified
4	Transportation, Communication and Other Public Utilities	40	General Trucking
		41	Moving and Furniture Storage
		42	Railway Express
		43	Postal Service
		44	Railroad and Street-Railway
		45	Telephone and Telegraph
		46	Gas and Electricity
		47	Contract Hauling, Common Carrier Trucks, Highway Freight
		48	Taxicabs
		49	Not Otherwise Classified
5	Wholesale and Retail Trade	50	Groceries, Meats, Poultry and Egg Dealers
		51	Dairy Products
		52	Fruits and Vegetables
		53	Other Food Products; Candy, Soft Drinks, etc.
		54	Tobacco and Tobacco Products
		55	General Merchandise and Apparel: Dept. and Variety Stores, Clothing, Millinery, Shoes, Sporting Goods, etc.
		56	Furniture (Household), Radio, Includes Curtains, Draperies, China, Glass, Musical Instruments, Carpets, Rugs, Appliances
		57	Motor Vehicles, Motorcycles, Motorboats, Accessories, Parts, Tires, Batteries. Includes New and Used.
		58	Filling Stations, Dealers in Petroleum Products, Except Fuel Oil
		59	Lumber Building, Includes Heating and Plumbing Equipment, Paint, Glass, Wallpaper, Electrical Wiring, etc.
		60	Hardware and Machinery, Power Tools, Fencing, etc.
		61	Eating and Drinking Places; Includes Restaurants, Ice Cream Stands, Taverns, etc.
		62	Drugstores, Liquor Stores, Beer and Wine Dealers
		63	Fuel, Ice, Fuel Oil, Bottled Gas
		64	Hay, Grain and Feeds, Farm and Garden Supplies

Code (Col. 15)	Industry	Code (Cols. 16-17)	Business
5	Wholesale and Retail Trade	65	Florists
		66	Office, Store and School Supplies; Books, Photographic Supplies, Luggage, Paper Products
		67	Chemicals and Allied Products- Soap, Oxygen, Acetylene, etc.
		68	Junk and Salvage Dealers; Second Hand Stores
		69	Not Otherwise Classified
6	Personal Service	70	Cleaning, Dyeing, Pressing and Alterations
		71	Laundries, Towel Service, Linen Supply
		72	Hotels, Hospitals, Funeral Directors, Cemeteries
		74	Miscellaneous - Shoe Repair Barber shops, Beauty Parlors, etc.
7	Amusement Recreation and Related Serviced	75	Amusement Parks, Bowling Alleys, Pool Parlors, Race Tracks, Sight-Seeing, Theaters, Motion-Picture Houses, Ball Parks, etc.
8	Professional and Related Service	76	Educational, Religious and Social Welfare Organizations, Research & Technical Laboratories, etc.
		77	Business Services - Coin Operated Machine Rental & Repair, Advertising Agencies, Sign Painting Shops, Window Cleaning Service, etc.
		78	Automotive - Storage Garages, Parking Lots, Service Garages, Radiator Repair, Tire Repair, etc.
		79	Radio Repair Shops
		80	Upholstering and Furniture Repair
		81	Other Repair Services - Electrical Appliances, Refrigerator Service, Piano Tuning, etc.
9	Government	82	Federal, State, County or Municipal Agencies, Except Postal Service and Government Owned Utilities
X	Industry not Otherwise Classified	83	Miscellaneous Services, Warehousing, Landscape Gardening, etc.
		90	Business not Otherwise Classified
Y	Industry not Reported	95	Business not Reported
Y	Personal Transportation	YY	Trucks not used in any Business "To and from Work", "Shopping", "Personal Business" and "Vacation"

Cols. 19-20-21: Capacity

The capacity shall be coded according to the following tabulation, to form a three-column code. Taxis shall be coded "XXX".

Capacity in Tons	Code (Cols. 19-20-21)	Capacity in Tons	Code (Cols. 19-20-21)
1/4	001	5 1/2	052
1/2	002	5 3/4	053
3/4	003	6	060
1	010	6 1/4	061
1 1/4	011	6 1/2	062
1 1/2	012	6 3/4	063
1 3/4	013	7	070

4 3/4	043	10	100
5	050	etc.	
5 1/4	051	Not Given	XXX
		Taxi	XXX

Col. 22: Day of Week

Code as follows:

Day of Travel	Code (Col. 22)
Sunday	1
Monday	2
Tuesday	3
Wednesday	4
Thursday	5
Friday	6
Saturday	7
Not Stated	X

Col. 18: Types of Trucks

The truck types as listed on the Trip Report Form shall be classified under five general headings for coding, in order to correspond to the classifications used on the External Interview form. The five classifications, with their code numbers are:

2. Single unit trucks with single rear tire.
   Consists of all single unit trucks, panel, pickups, refrigerator and tank trucks with 2 axles.

3. Other single unit trucks with dual rear tire.
   Consists of all single unit trucks other than those listed under (2) above, including refrigerator and tank trucks with 2 axles.

4. All single units with 3 or 4 axles.

5. Combinations of tractor-truck and semi-trailers.

6. Combinations of trucks and trailers.

7. Combinations of tractor-trucks, semi-trailers and trailers.

9. Taxicabs will be coded "9".

   The other classifications in vehicle types do not apply, passenger cars and buses.

Truck Type	Code Col. 18
Single Unit - Single Rear Tire	2
Single Unit - Dual Rear Tire	3
Single Unit - 3 or 4 Axle	4
TT-ST Combinations	5
TK-TR Combinations	6
TT-ST-TR Combinations	7
Taxi	9

Cols. 23-24-25; Total Trips

The total trips for the truck or taxi for the specified day will be the number listed at the bottom of the last Trip Report sheet for the vehicle in question. The coder shall check this total against the last trip number before coding.

Prefix two zeros to numbers 1 to 9 inclusive and prefix one zero to numbers 10 to 99 inclusive to complete a three column code; code "000" for no trips, and code "XXX" for trips unknown or incomplete.

Total Trips	Code (Cols. 23-24-25)
None	000
1	001
2	002
3	003
etc.	
10	010
11	011
12	012
etc.	
100	100
101	101
102	102
etc.	
Unknown	XXX

Cols. 26-27-28; Trip Number

The trips performed by the truck or taxi are numbered consecutively on the Trip Report form, and shall be coded as shown in the tabulation below. Note carefully the use of "X" which is explained below; in all cases, prefix sufficient zeros to complete a three-column code.

Trip Number	Code (Cols. 26-27-28)
Trips Unknown	XXX
No Trips	X00
1	X01
2	002
3	003
etc.	
10	010
11	011
12	012
etc.	
100	100
101	101
102	102
etc.	

When it is unknown whether the vehicle made trips, columns 26, 27 and 28 shall be coded "XXX" and the balance of the line and sheet shall be left blank.

When no trips have been made by the vehicle, code "X00" in columns 26, 27 and 28 and leave the balance of line and sheet blank.

The first trip of each vehicle making trips shall be coded "X01" followed by the coding of all other data for that trip; succeeding trips shall be coded "002", "003", etc.

When Cols. 23-25 are coded "000" cols. 26-28 must be coded "X00".

Col. 29: Trip Purpose

Enter in the coding space Col. 29 the number listed under "Trip Purpose" by the interviewer on form OD-7.

The complete code is as follows:

Trip Purpose	Code Col. 29
To & from Work	1
Shopping	2
Personal Business	3
Pick up Goods	4
Deliver Goods	5
Pick up and Deliver Goods	6
Service & Other Work Connected	7
To Base of Operation	8
Vacation	9

Cols. 30-31-32-33-34-35; Origin

Cols. 38-39-40-41-42-43; Destination

For coding instructions and explanation of coding procedure see Section II, item numbered (1) and (2).

Cols. 36-37; Land Use at the Origin

Cols. 44-45; Land Use at the Destination

Land Use applies to origins and destinations within the study area, origins and destinations outside the study area will be coded "YY". For complete codes see "Land Use Manual" revised January 1966.

Cols. 46-47-48-49; Time of Leaving

Cols. 50-51-52-53; Time of Arrival

See Section II, item numbered (3).

Col. 54; Screen

See Section II, item numbered (4). The code term "0" for non-driver trips will not apply.

RECORD LENGTH: _____ BLOCKING: _____

PAPER FORMS: _____ NO OF COPIES: _____

COLOR OF CARDS _____ LINED or UNLINED: _____

[illegible] OF DATA _____

Be sure to initial every interview form.

The shoulders of the highway are very narrow at some locations. Safety is the first consideration. Therefore each interviewer should be on the alert to prevent accidents. At such locations all interviews shall be made on the right side of the vehicle and not on the driver's side, in order that the interviewer will not be in the traffic lane.

External Interview Form O-D 4 (See Appendix III)

Before actual operations begin, the date and station number should be entered on almost as many forms as are estimated to be required for the operation of a station. The other items on line 1 of the form can be filled in by the interviewer.

1. Interview Number: This number will be filled in by coders.

2. State of Registration: If a vehicle carries a Michigan license, circle number (1); if Michigan license is not carried, circle number (2) for "other" and write the name of the State in which the vehicle is licensed in the space provided. For vehicles licensed in Canada, circle (2) and enter the word "Canada."

3. Type of Vehicle: At the bottom of column 3 is a description of vehicle types. Insert in the space the number that corresponds to the vehicle type.

4. Number of Persons in Vehicle: Enter number of persons including the driver. This applies to commercial vehicles, as well as passenger cars.

5. & 6. Origin and Destination: For places outside of Michigan, the name of the city and State should be entered. For places inside Michigan enter the name of city or town, or if rural, the highway number and distance from the nearest town. For nearby places outside the internal survey area, enter highway number or road name and

the distance from the city limits. For those inside the area, the exact street address must be secured. A round trip shall be considered as two trips, and therefore the places of beginning and ending should never be the same In cases where several places could be considered the place of beginning or ending, the farthest from the interview station should be used.

7. Trip Purpose: From the list at the bottom of the form enter the number which describes the major purpose for making the trip. However, it will be noted on the external trip report form that "From" and "To" with regard to trip purpose. are not included and that "Home" is not shown as a trip purpose. This departure from the method of recording trip purpose in the internal survey should be carefully noted.

   In the external survey, the purpose for each trip is recorded on the "To" basis only, with the exception of those trips made to get home, which should be classified according to the purpose from which they originate. For example, a person enroute home is interviewed at an external station after having been shopping. The trip purpose, in this case, should be recorded "Shopping" (Item 8). Likewise, if a person were returning home from work, the trip purpose should be recorded as "Work" and the numeral 1 would be inserted in the space provided.

8. Where is This Vehicle Owned or Regularly Garaged?: Where the address of the vehicle owned or garaged corresponds with either address in "5" or "6", circle the corresponding address. If other than the addresses given at "5" or "6", write in the correct address. In the case of commercial vehicles the place where the vehicle is garaged shall be entered.

   (a) In cases where the area being studied embraces two or more incorporated places, and for vehicles owned or garaged within the area, include the name of the city as part of the home address.

   (b) For those owned or garaged close to but outside of the area of the study, enter the name of the city, village or township.

(c) For other locations within the State, enter the name of the county.

(d) For locations outside of the State the name of the city or town and the state or country.

9. Screen: Data in this column not to be entered by interviewer.

10. Route of Exit or Entrance: This inquiry applies to "through" traffic only. For outbound vehicles, enter the name or number of the route by which the vehicle entered the survey area. For inbound vehicles, enter the name or number of the route by which the vehicle will leave the area. Do not enter the word "none" unless you are positive that the vehicle does not leave the area. If in doubt as to whether the address given by the driver is inside or outside of the study area do not guess at a designated route of exit or entrance but leave the inquiry space blank. The office checker will fill in the missing information by reference to the map of the area.

11. Stops in Area: This inquiry also applies only to through traffic. If one or more stops within the area were made by an outbound vehicle, or are contemplated for an inbound vehicle, circle "1" in this column. If no stops were made by an outbound vehicle, or are contemplated for an inbound vehicle, circle "1" in this column. If no stops were made or are contemplated, circle "2". If no definite answer can be obtained circle "x".

12. Intermediate Stop:

(a) Purpose: Insert the number which indicates the purpose of the intermediate stop from the code which appears at the bottom of the form.

(b) Location: The location of the intermediate stop shall be entered by street name and number or by name of some well known building or landmark.

Instructions to Traffic Recorder

The traffic recorder shall be located off the highway, at a distance and in a

FORM NUMBER

INTERNAL CODING

FORMAT OF HOME SURVEY TRIP TAPE RECORD

Column Number	Description of Data	Codes
Identification Data		
1-2	Survey Number	Cols. 1-2 contain the following codes: 02-Trip made by household resident 22-Trip made by group quarters resident
3-7	Household Number	Actual number in cols. 3-6; col. 7 contains the following codes: 1-A 2-B 3-C 0-No letter given
Location Data		
8-10	Census Tract Number of Residence	Col. 8 contains following codes: 0-Ingham County 2-Eaton County 1,4-Clinton County Cols. 9-10 contain actual census tract number assigned by the Bureau of the Census for the tracted area; for the untracted area the accompanying "Jurisdiction Code List" applies.
11-12	Governmental Unit of Residence	See "Jurisdiction Code List."
13-15	Traffic Zone of Residence	Code must be "001-411."
16-23	Grid Coordinates of Residence	Actual coordinates coded.
Household Data		
24	Number of Cars Owned	Actual number.
25	Actual or Estimated	Col. 25 contains the following codes: Blank-Cars owned reported by respondent 1-Cars owned estimated by interviewer
26	Income (Respondent's Estimate)	Col. 26 contains the following codes: 1-Without income 2-Under $3,000 3-$3,000 - $4,999 4-$5,000 - $6,999 5-$7,000 - $9,999 6-$10,000 - $14,999 7-$15,000 - $24,999 8-$25,000 & over 9-Not given

27	Actual or Estimated	Col. 27 contains the following codes: Blank-Income reported by respondent 1-Income estimated by interviewer
28	Kind of Building Lived in by Respondent	Col. 28 contains the following codes: 1-Single family 2-Two family 3-Three and over family 4-Rooming house 5-Hotel/motel 6-Institution 7-Trailer 8-Row house 9-Residential and other 0-Other +-Not given
29-30	Total Persons in Household	Cols. 29-30 contain actual number of persons living in that housing unit.
Person Data		
31-32	Person Number	Cols. 31-32 contain a unique person number for each person living in that housing unit.
33-34	Age of Respondent	Cols. 33-34 contain actual age or 00 which indicates age was not given.
35	Sex	Col. 35 contains the following codes: 1-Male 2-Female 0-Not given
36	Race	Col. 36 contains the following codes: 1-White 2-Other 0-Not given
37-38	Occupation of Respondent	Cols. 37-38 contain the following codes: 00-Professional, technical and kindred workers 01-Farmers, and farm managers 02-Managers, officials and proprietors, except farm 03-Clerical and kindred workers 04-Sales workers 05-Craftsmen, foremen and kindred workers 06-Operatives and kindred workers 07-Private household workers 08-Other service workers

		09-Farm laborers and foremen 10-Laborers, other than farm 90-Not in the labor force; unemployed, retired, housewife, student, not applicable 99-No answer
39-41	Educational Level Attained by Respondent	Col. 39 contains the following codes: 1-8-Elementary grade level attained 9-Not in this column Col. 40 contains the following codes: 1-4-High school level attained 9-Not in this column Col. 41 contains the following codes: 1-5-College level attained 9-Not in this column 000-Not given, does not apply 099-No schooling
42	Marital Status	Col. 42 contains the following codes: 1-Married 2-Widowed 3-Divorced 4-Separated 5-Never married 9-Not applicable, not household head 0-Not given
43	Relationship of Respondent to Head of Household	Col. 43 contains the following codes: 1-Head of household 2-Spouse 3-Son 4-Daughter 5-Other male, related (father, son-in-law) 6-Other female, related 7-Other male, not related 8-Other female, not related 0-Relationship not given
44	Is the Respondent a Driver of a Car or Truck?	Col. 44 contains the following codes: 1-Yes 2-No 9-Not applicable (under 5 years of age) 0-Not given
45	Is the Respondent Employed?	Col. 45 contains the following codes: 1-Full-time employment 2-Part-time employment

		3-Not employed 4-Student 9-Not applicable (under 18 years of age) 0-Not given
46-47	Land Use Code of Industry Where Respondent Works	Cols. 46-47 contain the codes presented in the Standard Land Use Coding Manual, published by HUD and BPR in 1965, or "00" which indicates land use was not given or not applicable. (See table, abstracted from Manual, entitled "Standard Land Use Classifications.")
48-50	Traffic Zone In Which Industry Is Located	Cols. 48-50 contain "001-411" industry is located in the Region; if industry is outside the Region, cols. 49-50 contain the county code indicated on the accompanying list entitled "Complete County Code for Michigan" and Col. 48 contains the following codes: 7-Ten counties surrounding Region 8-Counties in remainder of State or the three counties in the Tri-County Region 9-States other than Michigan Cols. 48-50 contain blanks or "0" if no data was available.
Trip Data		
51-52	Trip Number	Cols. 51-52 contain a number for each trip made by each individual. Coded by a two digit consecutive number for purposes of identification (01=first trip, 02=second trip).
53-55	Zone of Trip Origin	Cols. 53-55 contain "001-411" if trip origin is in the Region; if trip origin is outside the Region, cols. 54-55 contain the county code indicated in the accompanying list entitled "County Code for Michigan" if col. 53 contains the following codes: 7-Ten counties surrounding Region 8-Counties in remainder of State or the three counties in the Tri-County Region If col. 53 contains a "9," which indicates a state other than Michigan, then cols. 54-55 contain the state code indicated in the accompanying list entitled "State Code for the United States," or the country code indicated in the accompanying list entitled "Country Code."
56-58	Zone of Trip Destination	Cols. 56-58 contain "001-411" if trip destination is in the Region; if trip destination is outside the Region, cols. 57-58 contain the county code indicated in the accompanying list entitled

		"County Code for Michigan" if col. 56 contains the following codes: 7-Ten counties surrounding Region 8-Counties in remainder of State or the three counties in the Tri-County Region If col. 56 contains a "9," which indicates a state other than Michigan, then cols. 57-58 contain the state code indicated in the accompanying list entitled "State Code for the United States," or the country code indicated in the accompanying list entitled "Country Code."
59-61	Start Time	Cols. 59-61 contain the time that the trip began from zone of origin; cols. 59-60 contain the hour (military time) and col. 61 contains tenths of hours. For example, 1:06 p.m. would be coded 131 in cols. 59-61.
62-64	Arrival Time	Cols. 62-64 contain the time that the trip ended at the zone of destination; cols. 62-63 contain the hour (military time) and col. 64 contains tenths of hours.
65-66	Land Use of Trip Origin	Cols. 65-66 contain the codes presented in the Standard Land Use Coding Manual, published by HUD and BPR in 1965. (See table, abstracted from Manual, entitled "Standard Land Use Classifications.")
67-68	Land Use of Trip Destination	Cols. 67-68 contain same codes as cols. 65-66.
69	Purpose Trip Origin	Col. 69 contains the following codes: 1-Work 2-Personal business 3-Medical-Dental 4-School 5-Social-Eat meal 6-Change travel mode 7-Shopping 8-Recreation and ride 9-Home 0-Business +-Serve passenger
70	Purpose of Trip Destination	Col. 70 contains same codes as col. 69.
71	Mode of Transportation	Col. 71 contains the following codes:

		1-Auto driver 2-Auto passenger 3-Bus passenger 4-School bus passenger 5-Taxi passenger 6-Truck passenger 7-Walk to work 8-No answer
72	Car Available	Col. 72 contains the following codes: 1-Yes 2-No 3-Not given 0-Not applicable
73-74	Car Occupancy	Cols. 73-74 contain the actual number of people in the car including the driver or the following codes: -- -Not given ++ -Not applicable
75	Parking	Col. 75 contains following codes concerning type of parking facility used: 1-Street free 2-Street meter 3-Lot free 4-Lot paid 5-Garaged free 6-Garage paid 7-Service or repairs 8-Residential property 9-Cruised 0-Not parked -- -Not given ++ -Not applicable
76	Day of Travel	Col. 76 contains the following codes: 1-Sunday 7-Saturday 8-Weekday
77	Month of Travel	Col. 77 contains the following codes: 4-April 5-May 6-June 7-July
Factor 78-80	Expansion Factor	Cols. 78-80 contain the number, to nearest tenth, which expands the sample data to 100%.

81 Record Mark Record Mark

In addition, the Home Survey Trip Tape has the following characteristics which the user needs to know:

1. Tape recording density (high-556 BPI)
2. Tape blocking factor (10)
3. Sort sequence (by survey number, household number, person number, trip number)
4. Record count excluding padding (44288)
5. Header and trailer labels (none)
6. Padding characters (all 9's)

TRUCK-TAXI CODING

FORMAT OF TRUCK-TAXI SURVEY TAPE RECORD

Column Number	Description of Data	Codes
Identification Data		
1-2	Survey Number	Each record has a "1" in col. 1 and "0" in col. 2.
3-6	Sample Number	Actual number in cols. 3-6.
7	Vehicle Type	Col. 7 contains the following codes: 1-Truck 2-Taxi
8-13	Zone Garaged	Cols. 9-10 contain the county code indicated on the accompanying list entitled "County Code for Michigan" and col. 8 contains the following codes: 7-Ten counties surrounding Region 8-Counties in remainder of State or the three counties in Tri-County Region Cols. 11-13 contain "001-411" if truck or taxi is garaged in the Tri-County Region; if garaged outside the Region, cols. 11-12 contain the township code or "00" and col. 13 contains the city, village or place code.
14	Truck Type	Col. 14 contains the following codes: 1-Single unit, single rear tire 2-Single unit, dual rear tire 3-Single unit, three axle 4-TT-ST-combination 5-TT-ST-TR or TK-TR 6-Other 0-Not given (not applicable if taxi)
15	Day of Travel	Col. 15 contains the following codes: 2-Monday 3-Tuesday 4-Wednesday 5-Thursday 6-Friday 0-Not given, question not applicable
16-18	Total Mileage	Cols. 16-18 contain the actual number of miles or the following codes: 000-No mileage this day, no mileage in this area 001-One mile (or less than one mile) 998-Mileage not given 999-Not applicable

19	Actual or Estimated Mileage	Col. 19 contains the following codes: 1-Actual 2-Estimated 0-Not given, not applicable
20	Status of Interview	Col. 20 contains the following codes: 1-Complete 2-Refusal 3-Vehicle sold, replaced 4-Vehicle sold, not replaced 5-Vehicle junked, not replaced 6-Out of service 7-Moved 8-Garaged out of Region 9-Incomplete - everything but mileage is given +-No contact - tried 3 or 4 times, but could not reach the person 0-Location of truck unknown
21-23	Trip Number	Cols. 21-23 contain the following codes: 001-First trip 002-Second trip, etc. 000-No trips, this vehicle
24-26	Zone of Trip Origin	Cols. 24-26 contain "001-411" if trip origin is in the Region; if trip origin is outside the Region, cols. 25-26 contain the county code indicated in the accompanying list entitled "County Code for Michigan" if col. 24 contains the following codes: 7-Ten counties surrounding Region 8-Counties in remainder of State or the three counties in the Tri-County Region If col. 24 contains "9," which indicates a state other than Michigan, then cols. 25-26 contain the state code indicated in the accompanying list entitled "State Code for the United States," or the country code indicated in the accompanying list entitled "Country Code."
27-28	Land Use at Trip Origin	Cols. 27-28 contain the codes presented in the Standard Land Use Coding Manual, published by HUD and BPR in 1965. (See table, abstracted from Manual, entitled "Standard Land Use Classifications.") 00-Not given or not applicable

29-31	Zone of Trip Destination	Cols. 29-31 contain "001-411" if trip destination is in the Region; if trip destination is outside the Region, cols. 30-31 contain the county code indicated in the accompanying list entitled "County Code for Michigan" if col. 29 contains the following codes: 7-Ten counties surrounding Region 8-Counties in remainder of State or the three counties in the Tri-County Region. If col. 29 contains "9," which indicates a state other than Michigan, then cols. 30-31 contain the state code indicated in the accompanying list entitled "State Code for the United States," or the country code indicated in the accompanying list entitled "Country Code."
32-33	Land Use at Trip Destination	Cols. 32-33 contain the same codes as cols. 27-28.
34-35	Purpose of Trip Origin	Cols. 34-35 contain following codes: 01-Work 02-Personal business 03-Medical-dental 04-School 05-Social-Eat Meal 06-Change travel mode 07-Shopping 08-Recreation and ride 09-Home 10-Serve passenger 11-Picking up goods 12-Delivering goods 13-Picking up and delivering goods 14-To base of operation 15-Service and other work-connected business 00-Not given
36-37	Purpose of Trip Destination	Cols. 36-37 contain same codes as cols. 34-35.
38-40	Start Time	Cols. 38-40 contain the time that the trip began from zone of origin; cols. 38-39 contain the hour (military time) and col. 40 contains tenths of hours. For example, 1:06 p.m. would be coded "131" in cols. 38-40.

Detroit Regional Transportation
and Land Use Study
File Description
Linked Internal Trip Record

Position	Field	Code
(1-3)	Deck Identification	Constant 835 for this file.
(4-9)	Interview No.	Identifies (together with position 77 a unique household, the unit of the travel survey sample). Records from the Ann Arbor update are coded "v" in position 4.
(10-11)	Person Number	Persons interviewed within a household are numbered beginning with "01" for the household head. May not be a dense set due to linking.
(12-13)	Trip Number	Trips recorded for each person are numbered in sequence of occurance beginning with "01". May not be a dense set due to linking.
(14)	Mode of Travel	1. Auto Driver 2. Auto Passenger 3. Truck Passenger 4. Taxi Passenger 5. Bus Passenger 6. School Bus Passenger 7. Railroad Passenger 8. Air Passenger 9. Other to work -. N.A.
(15)	Persons in Car	Actual number of persons in car coded only for auto driver trips - mode "1".
(16)	Parking Code.	Coded for auto driver trips only - mode "1". 1. Free 2. Paid-Meter 3. Paid-Other +. Inappropriate (Other than auto driver) -. N.A.

Position	Field	Code
(17-21)	Time Trip began	The respondents report on the time this trip began, converted to a 24 hour clock basis. Records with times unknown are coded 0059 in this field.
(17-18)	Hour	Coded: Actual hour on a 24 hour clock.
(19-20)	Hundredths of an hour	Integeral minutes from original interview schedule converted to hundredths of an hour.
(21)	Time Code	Coded: A. AM P. PM N. Noon M. Midnight
(22-26)	Time Arrived	See positions 17-21
(27-30)	Date of Travel	Month, week, and day on which this trip was mode.
(27-28)	Month	Coded: 08. August, 1965 09. September, 1965 10. October, 1965 11. November, 1965 12. December, 1965 01. January, 1966 02. February, 1966
(29)	Week	Coded: Actual sequence number of week defined as Monday through Sunday. Numbers 1-6 are possible.

Position	Field	Code
(30)	Day	Coded: 1. Monday 2. Tuesday 3. Wednesday 4. Thursday 5. Friday
(31-38)	1960 Tract and Block of Trip Origin	The first column is a county area code: 1. Wayne County 2. Oakland County 3. Macomb County *4. Washtenaw County 5. Monroe County 6. St. Clair County Columns two through five contain the census tract and the last three columns contain the block. Locations outside the cordon line are identified by a 7, 8, or 9 in the first column. The remaining columns do not contain a census tract and block, but rather contain a code for the civil division of the location. For a full explanation of this coding see: External Location Coding, Dearborn: Center for Urban Studies, November, 1966. *The borderline sections of Livingston County within the Cordon Line are coded "45" in the first two columns.
(39-42)	TALUS Analysis Zone of Trip Origin	County — First Column Super District — First Two Columns District — First Three Columns Zone — All Four Columns

Position	Field	Code
(43)	Origin Screenline Code	Area of trip origin in relation to screenlines coded: 1. South of 14 Mile and east of Merriman - Orchard Lake screenlines. 2. South of 14 Mile and west of Merriman - Orchard Lake screenlines. 3. North of 14 Mile screenline. 4. Outside of cordon line.
(45)	Common Vehicle Type	This code is common to all travel survey files. Coded: 1. Auto Driver 2. Truck Driver 3. Taxi Driver 4. Auto Passenger 5. Truck Passenger 6. Taxi Passenger 7. Bus Passenger 8. School Bus Passenger 9. Rail, Air Passenger 0. Walk to work -. N.A.
(46)	Type of Trip	1. Cordon trip - one trip end inside study area and one outside. 2. Through trip - both ends of the trip are outside the study area. 3. Internal - both ends of a trip are within the study area.
(47-50)	TALUS Analysis Zone of Residence	See positions 39-42.

Position	Field	Code
(51)	Origin Purpose	1. Home 2. Work 3. Personal Business-Med. 4. Social-Recreation 5. Eat Meal 6. Shopping 7. School 8. Change Mode 9. Serve Passenger
(52-53)	Origin Land Use	See Appendix 1
(54-61)	1960 Tract and Block of Destination	See code for positions 31-38.
(62-65)	TALUS Analysis Zone of Trip Destination	See code for positions 39-42.
(66-71)	Blank	
(72)	General Purpose	1. Home based work 2. Home based personal business 3. Home based social recreation 4. Home based shopping 5. Home based school 6. Non home based
(73)	Home Based Flag	Blank. Non-Home based trip. 1. Trip origins is zone of residence. 2. Trip destination is zone of residence.
(74)	Destination Purpose	See code for position 51.
(75-76)	Destination Land Use	See Appendix 1.
(77)	Interview Tag	See code for positions (4-9)
(78-80)	Expansion Factor	The value by which each trip is multiplied to obtain a representation of the total universe.

External Location Coding

An eight digit location code analogous to the eight digit census tract-block code has been devised for use in coding trip terminals outside the Travel Survey cordon line.

The code is divided into three distinct segments:

1. A one digit area code (7, 8, or 9) denoting proximity to the study area.

2. A three digit code indicating county or state.

3. A four digit code indicating a more precise location within county or state.

"7" Area Codes

A location coded to the "7" area is in a county immediately adjacent to or within the TALUS seven county region. In addition to Michigan counties, this area also includes the Counties of Essex, Kent, and Lambton in Ontario. Locations within this area are coded with as much detail as possible. A three digit IBM numerical county code* follows the initial "7" area code. The fifth and sixth digits indicate the township, while the last two indicate the city, village, or unincorporated place of the trip terminal.

Example:	Area	County	Township	Village
	7	147	02	02

The interpretation of this code is: a location within an adjacent county (7); the county is St. Clair (147); the terminal is located within Brockway Township (02); and more precisely, within the village of Yale (02).

"8" Area Codes

A location coded to the "8" area is within Michigan, but not in a "7" area Michigan county. Like the "7" area code, the second through fourth digits indicate the county by means of the IBM code. Within the "8" area, however, the last four digits are considered as a unit and represent the city generating the trip. This city code is an expanded version of the four digit IBM numerical city code.

Example:	Area	County	City
	8	141	1530

This code indicates that the trip-end being coded is within Michigan, but not near the study area (8). It is in Presque Isle County (141), at or near Rogers City (1530).

"9" Area Codes

All trip terminals not coded to the "7" or "8" areas are put in the "9" area. Codes have been developed for all major locations in the United States and Canada. Any trip-ends to or from locations in Mexico will receive a single code. The three digits following the "9" area designation indicate the location's state, while the remaining four digits represent it's county.

Example:	Area	State	County
	9	035	0143

This code indicates the trip-end is outside of Michigan (9); it is in the state of Oklahoma (035); in Tulsa County (0143).

* IBM Corp., Reference Manual Numerical Code for States, Counties and Cities of the United States, (1961).

COMMENTS:

Detroit Regional Transportation
and Land Use Study
File Description
Commercial Vehcile Trip Record

Pos	Field	Code
(1-3)	Deck Identification	Coded: 537. Record is from the truck and special vehicle inventory. 539. Record is from the taxi inventory.
(4-8)	Interview Number	Identifies a unique vehicle, the unit of this sample.
(9-11)	Trip Number	Trips recorded for each vehicle are numbered in sequence of occurance beginning with "01".
(12-14)	Commodity	For trucks the type of commodity transported is recorded as a three digit code. See Appendix 5.
(15-16)	Total Trip Weight	For each vehicle trip the total weight of commodity and vehicle is coded to the nearest 1000 pounds, e.g., 11250 would be coded "11".
(17-21	Time Trip Started at Origin	The five column field for each time is coded exactly in hours and minutes with leading zeros. The first two columns are hour and the next two are minutes. The fifth column contains an A for AM, P for PM, N for noon, or M for midnight. Examples: 12:01 AM Coded — 1 2 0 1 A 2:30 PM coded — 0 2 3 0 P 12 Midnight coded — 1 2 0 0 M ++++ = Unknown
(22-26)	Time Trip arrived at Destination	See Code for Pos. 17-21.
(27-30)	Date of Travel	Month, Day, and Week on Which This Trip was made.
(27-28)	Month	Coded: 08. August, 1965 09. September, 1965 10. October, 1965 11. November, 1965 12. December, 1965 01. January, 1966 12. February, 1966

Pos	Field	Code
(29)	Week	Coded: Actual sequence number of week in month defined as Monday through Sunday. Numbers 1-6 are possible.
(30)	Day	Coded: 1. Monday 2. Tuesday 3. Wednesday 4. Thursday 5. Friday
(31-38)	1960 Tract and Block of Trip Origin	The first column is a county area code: 1. Wayne County 2. Oakland County 3. Macomb County *4. Washtenaw County 5. Monroe County 6. St. Clair County Columns two through five contain the census tract and the last three columns contain the block. Locations outside the cordon line are identified by a 7, 8, or 9 in the first column. The remaining columns do not contain a census tract and block, but rather contain a code for the civil division of the location. For a full explanation of this coding see: Appendix 6. *The borderline sections of Livingston County within the Cordon Line are coded "45" in the first two columns.
(39-42)	TALUS Analysis Zone of Trip Origin	County — First Column Super District — First Two Columns District — First Three Columns Zone — All Four Columns ++++ = Area outside of Cordon Line.
(43)	Origin Screenline Code	Area of Trip Origin in relation to screenlines coded: 1. South of 14 mile and east of Merriman - Orchard Lake screenlines.

Pos	Field	Code
		2. South of 14 Mile and West of Merriman - Orchard Lake Screenlines. 3. North of 14 Mile Screenline. 4. Outside of Cordon Line.
(44)	Destination Screenline Code	See Position 43.
(45)	Common Vehicle Type	This code is common to all travel survey files. Coded: 1. Auto Driver 2. Truck Driver 3. Taxi Driver 4. Auto Passenger 5. Truck Passenger 6. Taxi Passenger 7. Bus Passenger 8. School Bus Passenger 9. Rail, Air Passenger 0. Walk to Work -. N.A.
(46-50)	Blank	Not Used.
(51)	Origin Purpose	Coded: 1. Pick up Goods 2. Deliver Goods 3. Pick up and Deliver Goods 4. Service and Other Work Connected Business 5. Garaging Address and Base of Operations 6. Base of Operations Only 7. Garaging Address Only 8. Personal Business 9. Shopping A. Recreation (including Vacation)
(52-53)	Origin Land Use	See Appendix 1.
(54-61)	1960 Tract and Block of Destination	See Code for Positions 31-38.
(62-65)	TALUS Analysis Zone of Trip Destination	See Code for Positions 39-42.
(66-73)	Blank	Not Used.
(74)	Destination Purpose	See Code for Position 51.

Pos	Field	Code
(75-76)	Destination Land Use	See Appendix I.
(77)	Blank	Not Used.
(78-80)	24 Hour Expansion Factor	The value by which each trip is multiplied to obtain a representation of the total universe of trips.

Land Use

Residential	Where Used	
	Deck No.	Col. No.
11. Single-family residing (except mobile home)	513	57-58
12. Two-family residing	514	38-39, 70-71
13. Multiple-family residing - walk-up	515	48-49, 70-71
14. Multiple-family residing - elevator	517	57-58
15. Group quarter residing	519	57-58
16. Residential hotels	526	52-53, 75-76
17. Mobile home residing	533	52-53, 75-76
18. Transient residing	534	52-53, 75-76
19. Residing, N.E.C.	535	52-53, 75-76
	537	52-53, 75-76
Manufacturing	539	52-53, 75-76
20. Food and kindred products - manufacturing		
21. Tobacco products - manufacturing		
22. Textile mill products - manufacturing		
23. Apparel and other finished products made from fabrics (excluding leather) and similar materials - manufacturing		
24. Lumber and wood products (except furniture) - manufacturing		
25. Furniture and fixtures - manufacturing		
26. Paper and allied products - manufacturing		
27. Printing, publishing, and allied industries		
28. Chemicals and allied products - manufacturing (paints, cosmetics and drugs)		
29. Petroleum refining and related industries		
30. Rubber and miscellaneous plastic products - manufacturing		
31. Leather and leather products - manufacturing		
32. Stone, clay and glass products - manufacturing		
33. Primary metals industries		
34. Fabricated metals products - manufacturing (excluding ordinance)		
35. Non-electrical machinery - manufacturing (tool & die)		
36. Electrical machinery, equipment & supplies - manufacturing		
37. Transportation equipment & supplies - manufacturing		
38. Professional, scientific & controlling instruments; photographic & optical goods; watches & clocks - manufacturing		
39. Miscellaneous manufacturing (including ordinance, excluding tobacco products)		
Trade Activity		
50. Wholesale trade - food		
51. Wholesale trade - non-food (scrap metal)		

52. Retail trade - building materials and hardware (excluding farm equipment)
53. Retail trade - general merchandise (department store, dime store)
54. Retail trade - food (grocery store)
55. Retail trade - automotive, marine craft, aircraft and accessories
56. Retail trade - apparel and accessories
57. Retail trade - furniture, home furnishings, and equipment
58. Retail trade - eating activity (restaurant)
59. Other retail trade (drug store, liquor, bookstore, sporting goods, garden, flower shop, jewelry, camera shop.) If shopping center and store NA, code to predominant store; if none, code to grocery.
5A. Retail trade - farm equipment
5B. Retail trade - drinking activity (bars)

Services

60. Mixed service - no predominance (general office building)
61. Finance, insurance, and real estate
62. Personal services (barber shop, beauty parlor)
63. Administrative service activities (Ford Central Office Administrative Building, City Hall)
64. Installation and repair service activities
65. Consulting service activities
66. Medical service activities
67. Public safety activities (police, firemen)
68. Custom service (creative industries, auto body design, metal plating, heat treating)
69. Miscellaneous services (including Post Office)

Cultural & Education

70. Educational services
71. Museum, library and public display
72. Public assembly, miscellaneous purposes
73. Social-political organization activities
77. Worship activities
78. Cemeterial activity
79. Other cultural and educational activities

Recreational and Entertainment

A1. Natural outdoor recreational activities, low intensity development (except water)
A2. Casual outdoor recreational activity (except water) - parks, picnicking
A3. Highly organized outdoor sports activity (except water and golf courses) - baseball or football games
A4. Amusement park activities

A5. Golf course activities
A6. Outdoor water recreation activities (water surface only - swimming, boating)
A7. Outdoor recreation, N.E.C.
A8. Indoor sports and games (hockey game)
A9. Indoor entertainment assembly (movies, theater)

Transportation, Communication and Utilities

40. Railroad transportation right-of-way
41. Mass transit right-of-way (except railroad)
42. Highway and street right-of-way
43. Motor vehicle facility - including truck and bus terminal parking - excluding freight terminal
44. Automobile parking activities
45. Aircraft transportation (except freight terminals)
(46) Marine craft right-of-way (navigable waterways)
47. Marine craft transportation (excluding right-of-way and freight terminals) All boats.
48. Communication right-of-way
49. Communication (excluding right-of-way) - telephone company
4A. Utility right-of-way
4B. Gas and electric utility (except right-of-way)
4C. Water & waste utility (except right-of-way)
4D. Other transportation, communication, and utilities right-of-way, N.E.C.
4E. Other transportation, communication, and utilities, N.E.C. (excluding right-of-way and sanitary land fill)

Resource Production and Extraction

81. Agricultural activities
82. Agricultural related services (including animal husbandry)
83. Commercial forestry and related services
84. Commercial fishing activities
85. Strip mining and/or quarrying
86. Subterranean mining
87. Fluid resource extraction
89. Resource production and extraction, N.E.C.

Unused Land and Water

91. Unused land - excluding developed with structure and non-commercial forest
92. Non-commercial forest development
93. Unused water areas, N.E.C.
94. Unused land - developed with structure for residing
95. Unused land - developed with structure for manufacturing
96. Unused land - developed with structure for transportation, communication, and utilities
97. Unused land - developed with structure for trade
98. Unused land - developed with structure for service

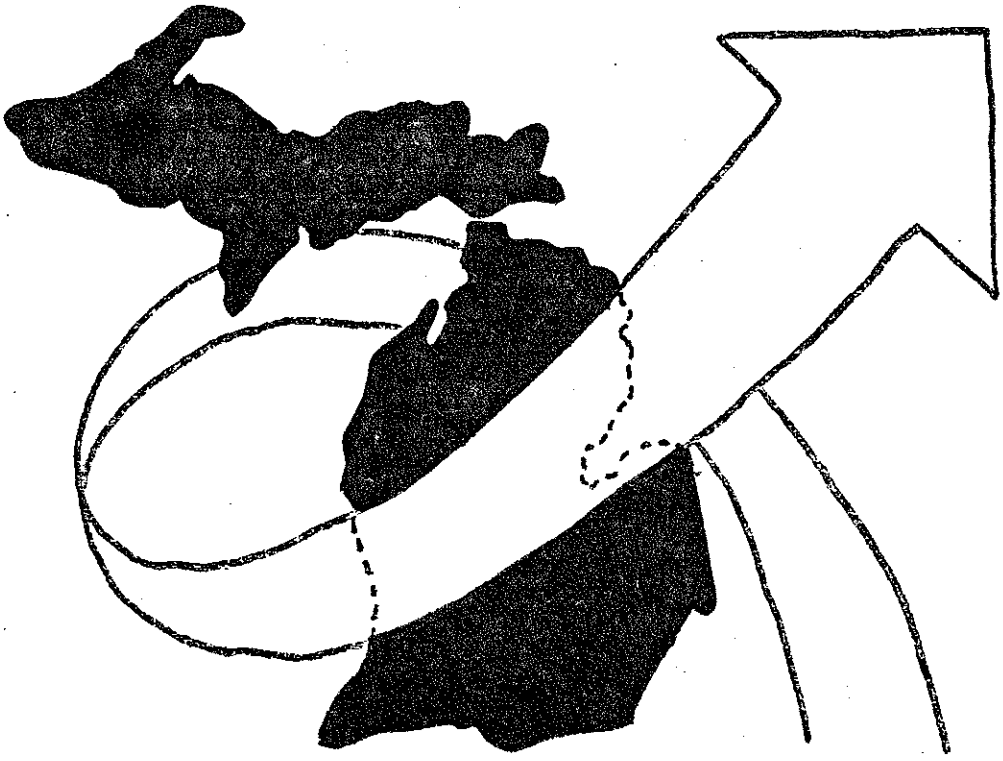
99. Unused land - developed with structure for cultural and educational activity
9A. Unused land - developed with structure for resource production and extraction
9B. Unused land - developed with structure for storage, distribution, and contract construction
9C. Unused land - developed with structure for recreation
9D. Unused land - developed with structure, N.E.C.

Storage, Distribution and Contract Construction

01. Closed storage activity
02. Open storage activity
03. Junk yard and/or demolition activity
04. Rail freight terminal activity
05. Truck freight terminal activity
06. Marine freight terminal activity
07. Air freight terminal activity
08. General contract construction
09. Sanitary land fill activity
0A. Storage, distribution, and contract construction, N.E.C.

APPENDIX D

OPERATION OF REFORMATION PROGRAM



OD STATEWIDE REFORMATION
Q01099

This program will use origin-destination trip information to create an 80-character trip record for use in the statewide model (510 zone or 2300 zone). There are three main phases:

Phase 1

Read external-cordon trips, convert to statewide zones, and reformat.

Phase 2

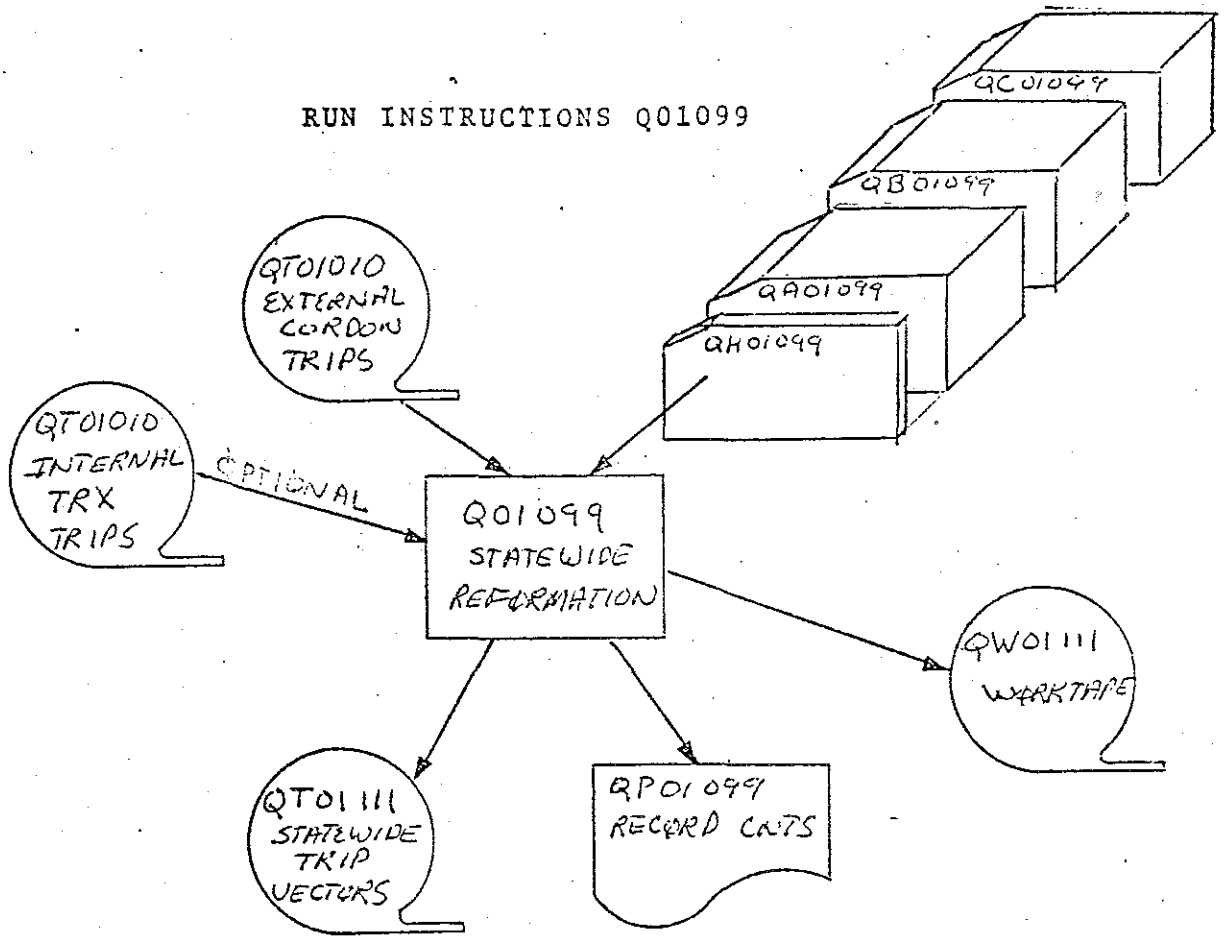
Read internal and truck-taxi records, convert to statewide zones, and reformat.

Phase 3

Read all reformated records, sum like records, and write to a final tape. Any records with a county-level statewide zone are split according to user-supplied criteria.

Program may be restarted at Phase 2 or Phase 3. An option exists to skip Phase 2.

Conversion tables for converting OD zone or OD tract-bloc to statewide zones are supplied by user.



All input cards and tape labels will be supplied by user. Card files must be in order as shown above, and should be run from psuedo-reader.

If two input tapes are used, the external cordon trips should be mounted first. Tapes are used one at a time.

Printer output will be forced to printer back-up disk by program.

Save work tape QW01111.

Program Failure

There are two restart points. A SPO message will indicate when restart points have been reached. If Phase 1 has not been completed, the job must be re-executed from the beginning. See attached for restart at Phase 2 or Phase 3. Save printer disk output is possible.

or
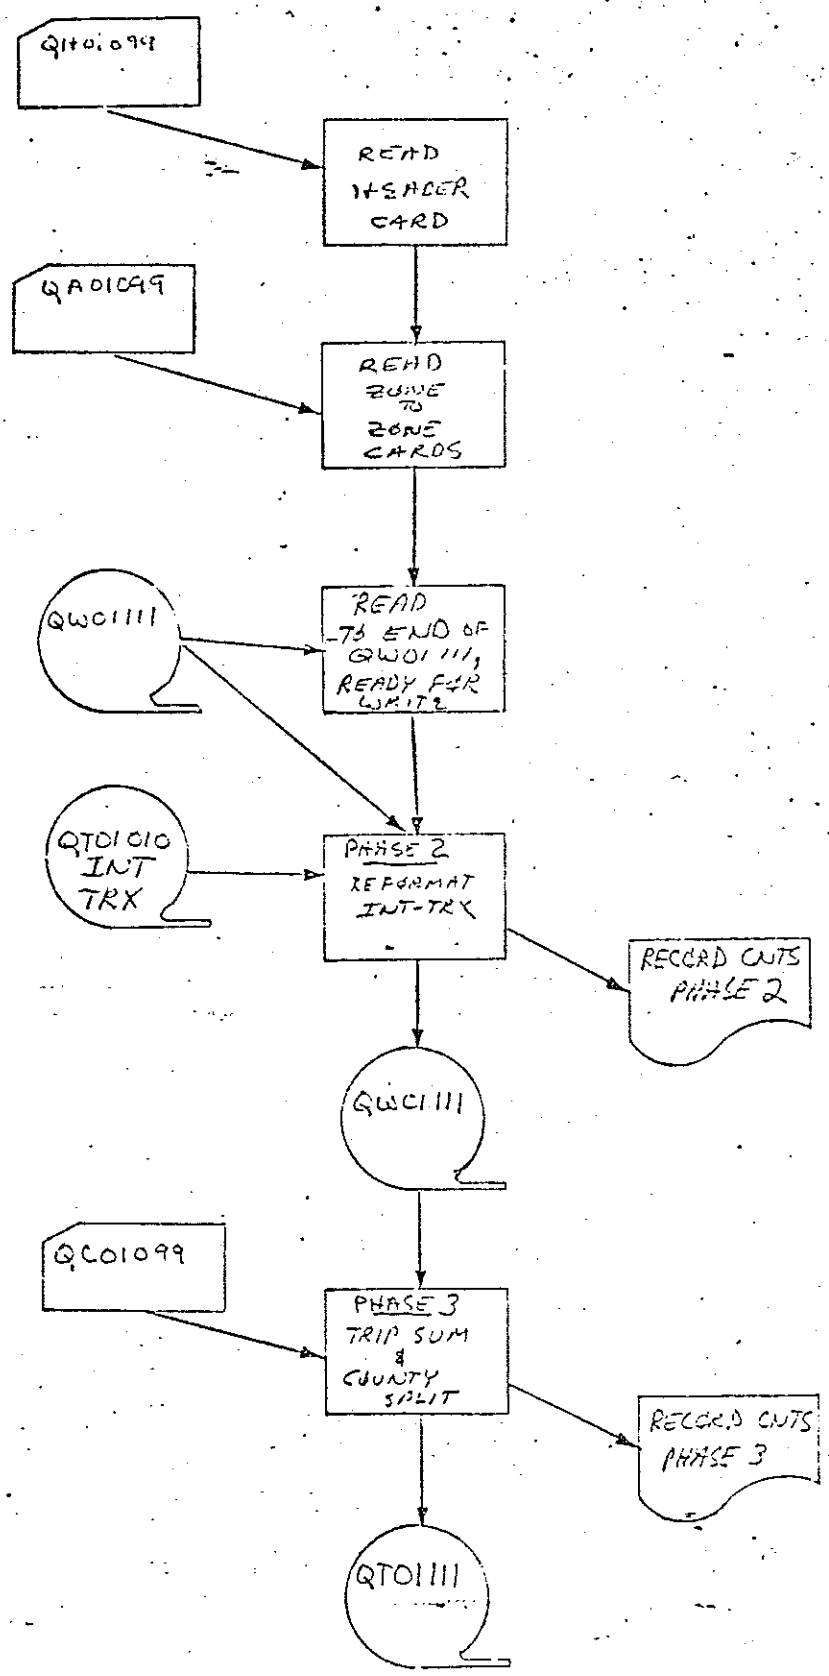
Ø (to complete Phase 2)

QUIUTT.

RESTART: PHASE 2



Program Q01099

INSTRUCTIONS - RESTART: PHASE 2

Input:	Work Tape	QW01111	
	Header Card	QH01099	
	Cards	QA01099	
	Cards	QC01099	
	Tape	QT01010	INT & TRX Records

For Phase 2 restart there must be two changes made in header card (QH01099):

Col. 8-23 = "RESTART:PHASEØ2Ø"

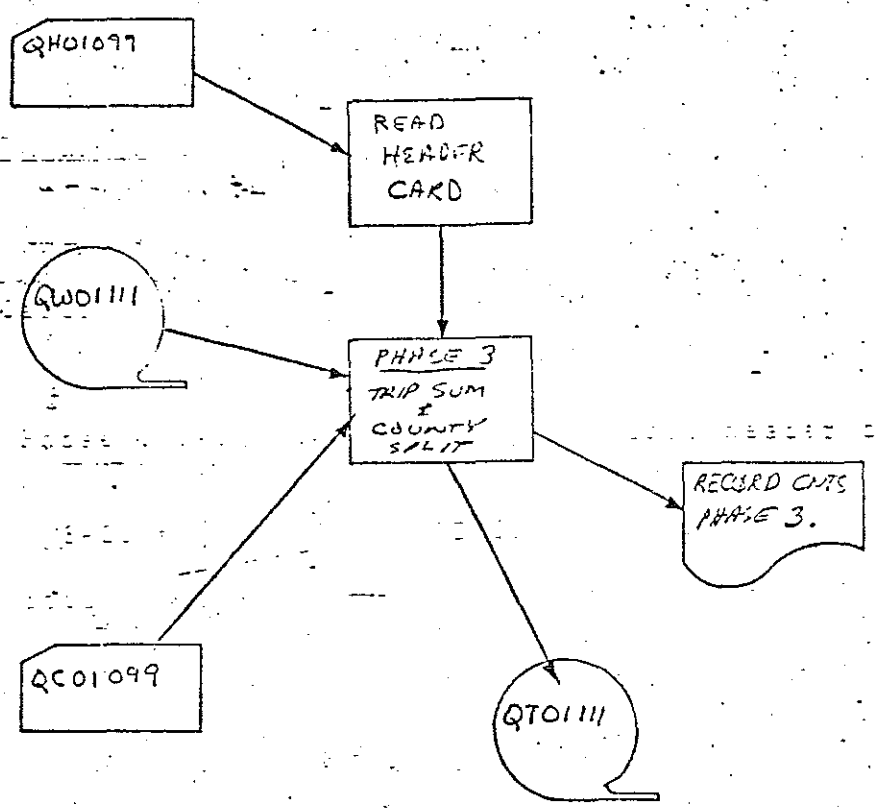
72-76 = Number of records indicated in SPO message.

All other columns should be the same as the original header card.

See attached flowchart.

QTC177

RESTART : PHASE 3



PORGRAM Q01099

INSTRUCTIONS - RESTART: PHASE 3

Input: Work Tape QW01111
Header Card QH01099
Cards QC01099

For Phase 3 restart, duplicate original header card except:

Col. 8-23 = "RESTART:PHASEb3b"

See attached flowchart.

CONVERSION CARDS
Q01099

QA01099
ZONE-TO-ZONE CARDS

Converts OD zones to statewide zones. See attached format. Cards need not be in sort.

QB01099
TB-TO-ZONE CARDS

Converts OD Trac-Bloc to statewide zones. See attached format. Cards must be in sort by OD-Trac-Bloc.

QC01099
CNTY-SPLIT-CARDS

See attached format. These cards create new statewide zones for county level zone numbers (zone ends in "00"). The percent of trips to be assigned to each new zone is coded in the factor fields. The first factor field is for the first zone in this county; the second factor field is for the second zone in this county, etc.

To expand the number of zones for a county beyond 18, a maximum of six cards may be used. The card number (Col. 6) must be appropriately coded.

Example: For county zone = 6300 we wish 5.5% of trips to be assigned to first zone (6301), 60% of trips for second zone (6302), and 35.5% for the third zone (6303).

County split card would be coded as follows:

Col.	1-4	= "6300"
	6	= "1"
	8-10	= "055"
	12-14	= "600"
	16-18	= "345"
	20-22	= "999"

If there are not enough trips available to allow each zone to have at least one trip, the largest zones will be filled first until no whole trips are available; and the splitting routine will end.

Cards must be in sort by zone (major) and card number (minor).

ERROR MESSAGES
Q01099

All errors are fatal except as noted in Number 8.

1. MISSING HEADER CARD

   There was no header for file QH01099.

2. INVALID RUNTYPE ON HEADER CARD

   Runtype was not one of the following:
   (a) "NORMAL "
   (b) "RESTART:PHASE 2 "
   (c) "RESTART:PHASE 3 "

3. INVALID PROGRAM NUMBER

   Program number was not "Q01099"

4. INVALID OD-ZONE ON ZONE-TO-ZONE CARDS

   OD zone was <1 or >420.

5. INVALID STW-ZONE ON ZONE-TO-ZONE CARDS

   Statewide zone from file QA01099 was not numeric.

6. TRACT-BLOC-TO-ZONE CARDS NEEDED

   There were no cards for file QB01099.

7. INVALID STW-ZONE ON TB-CARDS

   Statewide zone from file QB01099 was not numeric.

8. TRIPS WITH NO STW ZONE

   External records which do not have a corresponding tract-block card are listed. For Michigan codes, this is a fatal error; for outstate codes, it is not a fatal error.

9. INVALID CARD-NO ON CNTY-ZN-CARDS

   Card number (file QC01099) was <1 or >6.

10. NO CNTY-ZN CARD FOR FOLLOWING ZONE

A county zone on work file could not find a match in card file QC01099. If the zone printed is zero it may indicate that an OD zone (INT-TRX) had no statewide equivalent loaded.

11. INVALID FACTOR PCT FOUND ON CNTY-ZN CARDS

A factor from file QC01099 was not numeric.

12. CNTY-ZN-CARDS OUT OF SORT-1

County zone numbers in file QC01099 were not in ascending sort.

13. CNTY-ZN-CARDS OUT OF SORT-2

Card number from file QC01099 was out of sort.

14. CNTY-ZN-CARDS OUT OF SORT-3

Program was expecting another card of percents for a particular zone, but next card had a new zone number.

15. INVALID CITY-ZN

City Zone field on header was not numeric.
