The Aviation Planning Unit maintains historical data on passengers, mail and cargo of each airport with scheduled airline service. These statistics are provided by the airport managers and compiled by the Aviation Planning Unit. These statistics are utilized both to measure aviation activity and to justify projects for state and federal programs. They are also provided to other governmental agencies, private industry, the news media, and the general public.

Commercial Service Airport Locations

During 1985 scheduled air passenger services were provided at 23 Michigan airports. Map 1 identifies those airports with service throughout 1985. Mackinac Island, which began service in 1982, operates a seasonal service during the summer months only. The other 22 airports have been operating since before 1981 and operate throughout the year.

Air Service Statistics and Trends

Table 1 identifies the deplaned, enplaned and total passengers at the 23 commercial service airports for each year between 1981 and 1985. The percent change in total passengers from the previous year is also identified. The 10 year trend of enplaned passengers is identified in Table 2 and graphically portrayed in Figure 1. Table 3 provides a detailed breakdown of passengers; Table 4 airmail; and Table 5 air cargo for 1984 vs. 1985. Figures 2, 3 and 4 gives the monthly breakdown in 1985 for passengers, airmail and cargo, respectively.

Since 1982, when the decline in total passengers ended, total passenger figures have climbed to record statewide levels in 1985. In 1983 the declining trend in total passengers was reversed and an increase of 6.7 percent occurred. This trend continued into 1984 with a 19.7 percent increase. Total annual passenger movements from 1981 to 1985 have increased by 6,998,707 or 62.5 percent. Total passengers in 1985 surpassed the 1979 total by 4,219,925 and the 1984 all time high for Michigan by 4,146,925 passengers.

A five year continual drop in total passengers occurred at Ironwood, Jackson and Muskegon. Detroit City and Sault Ste. Marie reversed a downward trend and showed an increase in 1985 over 1984. Mackinac Island had a three year decline in total passengers.

Total statewide airmail increased by 4.4 percent and total air cargo also increased by 4.4 percent from 1984 to 1985. Airmail decreased at seven of the 13 locations that reported statistics. Only six of the 23 locations showed increases in total air cargo. Detroit Metropolitan and Grand Rapids were responsible for the overall increase in statewide cargo statistics.

Observations and Conclusions

Figures 5 through 27 identify the monthly trends of enplanements at each of the 23 commercial service airports between 1981 and 1985. Generally, the peak of enplaned passengers during the five year period occurred during 1981 and, as the impacts of air service deregulation and the downturn in the Michigan economy were realized, a steady decline was experienced. During 1983 and 1984 this trend was reversed at the busier airports with passenger levels returning to or exceeding 1981 levels. These locations were Detroit Metropolitan, Flint, Grand Rapids, Houghton/Hancock, Kalamazoo, Lansing, Marquette and Saginaw. At 15 of the airports with a low level of secheduled passenger service, passenger levels remain depressed over the five year period (refer to Table 1). Only 8 locations had higher figures in 1985 than they experienced in 1981.

Figures 28 through 32 identify the market share that each of the five busiest commercial service airports had of the total passenger activity for each year 1981 to 1985. The five busiest airports have increased their market share from 93.1 percent in 1981 to 95.1 percent in 1985.

Detroit Metropolitan, the busiest airport in Michigan, accounted for more than 80.2 percent of the traffic in 1981 and 83.0 percent in 1985. This trend has been generally observed throughout the country as one of the impacts of air service deregulation where the larger, busier airports have increased their share of the market as smaller airports continue to experience declining service and passenger levels.
