INTRODUCTION

This report presents the instate and outstate population projections to the year 2010, to be used in the statewide traffic forecasting model. There has been a need to update population projections which is a basic variable in trip generation-distribution. With the completion of the report Population Projections for Michigan to the Year 2010 by the Michigan Department of Management and Budget the activity of updating population data that links with the traffic forecasting model was undertaken. The following projections are a result of this activity.

Population data was collected for the United States and Canadian provinces that are used as input in the statewide model. Projections that could not be obtained directly were forecast inhouse using a variety of methods discussed later in the Sources of Information Section. State and provincial projections were separated into instate and outstate transportation zones corresponding with the 547 and 2300 transportation zone system boundaries. Figures 1-3 depict the 547 instate and outstate zones. Figures 4-7 are county/zone listings for both the 547 and 2300 zone system.

U.S. and Canadian census data were used along with projections compiled from documented library resources. Projections made by the Transportation Planning Procedures Section are based on historical growth and an assumption of future linear growth. (See the following section for further details.)

The final zone projections in five year increments from 1980-2010 are presented in the last section of this report. These projections are also stored as computer files in the format required for traffic forecasting.

SOURCES OF INFORMATION
(by Location and Year)

Population projections for the 547 and 2300 transportation zone system were compiled from a variety of sources depending on the year and the location. Along with U.S. and Canadian census data, projections are available from 1985 to 2010 in 5 year increments. Below is a list of the data sources and a brief explanation of the methods used to compute these projections.

MICHIGAN (Zones 1-507 and Zones 1-2307)

Within Michigan, zones have either city, township, or census tract boundaries.

YEAR 1980:

1980 U.S. Census of Population and Housing, Bureau of the Census, U.S. Department of Commerce.

State total population was taken directly from the U.S. census. Zonal population is based on the 547 and 2300 transportation zone system boundaries as established by the Transportation Planning Procedures Section, Bureau of Transportation Planning.

YEAR 1985-2010:

Population Projections for Michigan to the Year 2010, Michigan Department of Management and Budget (DMB).

State and county level population projections were obtained from the above source. Population projections were then computed for the 547 and 2300 transportation system zones. These forecasts were based on 1970 and 1980 county and zone growth rates but were constrained by DMB county projections for the respective year.

- The following formula was used to compute the zonal population for each five year interval:

$$\text{Zone Pop Yr.} = \text{Zone Pop 1970} * \frac{\text{Cnty Pop Yr}}{\text{Cnty Pop 1970}} * \frac{\text{Zone Pop 1980}}{\text{Zone Pop 1970}} * \frac{\text{Cnty Pop 1980}}{\text{Cnty Pop 1970}}$$

SURROUNDING STATES (Zones 514-540 and Zones 2352-2380)

For those states immediately surrounding Michigan, zones have county boundaries.

YEAR 1980:

1980 U.S. Census of Population and Housing, Bureau of the Census, U.S. Department of Commerce.

State total population was taken directly from the U.S. census. The zonal population is the number of persons residing within the established 547 and 2300 transportation zone system boundaries.

YEAR 1985-1990:

Donnelley Demographics Database, Donnelley Marketing Information Services, 7/20/85.

State total population for the states immediately surrounding Michigan was obtained from Donnelley Demographics Database which projects population and other social/economic information. Donnelley's projected state population was further broken down in the 547 and 2300 transportation system zones. Population for each zone was estimated to remain the same percentage of the state total population as in 1980. For example, if in 1980 a zone comprised 25% of the state total population then for the years 1985 and 1990 it was projected to comprise the same percentage (25%).

YEAR 1995-2010:

Transportation Planning Procedures Section Projections.

State total population for these years were projected using 1980 U.S. census population and 1990 Donnelley Demographic projections assuming a linear growth rate. The following formula was used to calculate each 5 year population forecast.

$$\text{Yr. Population Projection} = \frac{1990 \text{ DONpop} - 1980 \text{ CENpop}}{2} + \text{Prev. 5 Yr. Pop.}$$

For Example:

$$\text{Yr. 1995pop} = \frac{1990 \text{ DONpop} - 1980 \text{ CENpop}}{2} + 1990 \text{ DONpop}$$

$$\text{Yr. 2000pop} = \frac{1990 \text{ DONpop} - 1980 \text{ CENpop}}{2} + \text{Yr. 1995pop}$$

Population by zone is based on 547 and 2300 transportation zone system boundaries. Projections were calculated using the same method as for the years 1985 and 1990. A zone was estimated to maintain the same percentage of the projected state population (obtained from the above formula) during 1995-2010 as it did in 1980.

FAR STATES (Zones 541-547 and Zones 2308-2351).

Zones have state boundaries.

YEAR 1980:

1980 U.S. Census of Population and Housing, Bureau of the Census, U.S. Department of Commerce.

The state total population was taken from the 1980 U.S. census. Since each zone is equivalent to a state no further calculations were required.

YEAR 1985-1990:

Donnelley Demographics Database, Donnelley Marketing
Information Services, 7/20/85.

Year 1985 and 1990 state population was obtained from Donnelley Demographics Database which projects population and other social/economic information. Zones have state boundaries therefore no further calculations were required.

YEAR 1995-2010:

Transportation Planning Procedures Section Projections

Population projections for the far states were calculated employing the same method as for Michigan's neighboring states. The 1980 U.S. Census and 1990 Donnelley Demographic Database population projections were used to project future state population. Linear growth was assumed to occur during 1995-2010. The following formula illustrates how each state's five year population was projected.

$$\text{Yr. Population Projection} = \frac{1990 \text{ DONpop} - 1980 \text{ CENpop}}{2} + \text{Prev. 5 Yr. Pop.}$$

For Example:

$$\text{Yr. 1995pop} = \frac{1990 \text{ DONpop} - 1980 \text{ CENpop}}{2} + 1990 \text{ DONpop}$$

$$\text{Yr. 2000pop} = \frac{1990 \text{ DONpop} - 1980 \text{ CENpop}}{2} + \text{Yr. 1995pop}$$

A zone is equivalent to a state, therefore, no further calculations were required.

CANADA (Zones 509-513 and Zones 2381-2391)

Within Canada, zones have county/district boundaries.

YEAR 1980:

Canadian Almanac and Directory 1983; also Postcensal Annual Estimates of Population for Census Divisions and Census Metropolitan Areas, Statistics Canada.

Provincial population counts received from the 1981 Canadian census taken on June 3, 1981 were used as 1980 population data. Provincial population data was separated by county/district in order to correspond with the 547 and 2300 transportation zone system.

YEAR 1985-2010:

Population Projections for Canada, Provinces, and Territories 1984-2006, Statistics Canada.

Canadian provincial population years 1985-2005 were taken directly from the above report by Statistics Canada, an agency which forecasts the future growth of Canada. A number of projection scenarios were developed using combinations of fertility, internal and international migration assumptions. The scenario which incorporates the most plausible course of events in the short term (Projection 1) was selected for inclusion as 1985-2005 population projections.

Canadian zone population was calculated using the same method as U.S. zone population. Each zone's population was projected to comprise the same percentage of the total provincial population in these years as it did in 1981 (the Canadian census taking year).

Year 2010 provincial population was projected by the Transportation Planning Procedures Section assuming the same growth trends as projected by Statistics Canada. Each zone's population is the same percentage of the total provincial population as in 1981.
