SECTION A - A

SECTION B - B

NOTES:

A gradual uniform transition shall be made from the standard concrete curb and gutter to the concrete spillway.

Plane of weakness joint spacing shall be at uniform intervals of approximately 4'-0".

The spillway shoulders and foreslopes will be underlaid with geotextile liner from the back side of curb to the far end of the plain riprap including the entire footprint of the plain riprap.

When using spillways in other areas, such as backslopes, the geotextile liner shall underlay the full length of the spillway and the entire footprint of the plain riprap. The geotextile liner shall have a minimum width equal to the width of the spillway.

The spillway shall be given a transverse coarse broom finish.

While concrete spillway is shown on the foreslopes, it may be used on the backslope as specified on the plans. Concrete shoulder gutter would be correspondingly omitted.

The curb and gutter shall be aligned with the beam guardrail as specified on standard plan R-67-SERIES. The location of guardrail posts should be determined prior to locating the spillway or downspout header.
